THIRD
ANNUAL MESSAGE

1913-1914

JAMES H. PRESTON

Mayor of Baltimore

ISSUED JUNE, 1914

BALTIMORE
MEYER & THALHEIMER
CITY PRINTER
1914

THIRD ANNUAL MESSAGE

Gentlemen of the City Council:

I have the honor, in accordance with the terms of the Charter, to submit herewith to you my third annual report.

The immediate finances of the city are in excellent condition. We have a balance in bank for the completion of the work for the year 1914, as of June 1 this year, of $6,791,999.40, upon which we are being paid interest by the banks at the rate of 2¼ per cent. and in some instances 3 per cent.

The following is a statement of the gross and net debt of the city, not including the physical assets, such as the City Hall, Court House, Public Schools, Parks, etc.:

The gross debt of the city, as of December 31, 1913, is		$79,418,304 50
Sinking funds, face value	$26,036,750 17	
Water works, stock outstanding	11,100,000 00	
Electrical conduits, stock outstanding	3,375,000 00	
Docks and piers, stock outstanding	6,105,000 00	
Turnpike stock	412 50	
Total		46,617,162 67
Leaving a net debt of		$32,801,141 83

There has been an increase in the funded debt of the city for the year 1913, by the sale of city stock, to the amount of $8,125,000.

I desire to call special attention to the rapidly increasing gross and net debt of the City of Baltimore, and to say a word of caution against any extension or increase in this debt, except that which is absolutely necessary to finish the sewerage system now nearing completion.

Any other increase in the city's debt I deem unwise until the present authorized issues have been expended, the sewerage system has been completed, and we can see more clearly our ability to sell stock profitably and to pay interest and sinking fund without an undue burden on the tax-payer.

It must be borne in mind that the interest and sinking fund, amounting, approximately, to 5 per cent. per annum, must be carried in the tax rate. For example: On the sale of $7,000,000 of city stock in the year 1914, an annual expenditure of approximately $350,000 is entailed, and this must be added to the amount expended in 1915.

In addition to this the stimulation of the city's activities necessitates an unavoidable increase in the overhead charges, which cannot be maintained upon a level with the former year, however strenuously the city authorities may work to that end.

It is safe to say, therefore, that at least $500,000 more must be appropriated for 1915 than was necessary in 1914.

This additional burden added to the already heavy liability of the tax-payer presents a difficult problem. The basis must be increased, the rate must be raised, or new sources of revenue must be discovered.

I therefore strongly urge that no additional bond issues be authorized beyond that for the completion of the sewerage system, until the stock now in the city treasury, and which must be sold under the mandate of the people, is disposed of.

There remains in the treasury, to be issued, the larger part of which will have to be issued in 1915, the sum of $9,865,000.

This will entail an additional charge of about $450,000 per annum, which must be borne as I have indicated above, when all the present authorized loans shall have been issued.

I desire to congratulate the people of Baltimore upon the successful outcome of the session of the Legislature for 1914.

We obtained $600,000 for the City of Baltimore for paving, and an appropriation of $1,000,000 for the construction of a new Light Street Bridge in Anne Arundel and Baltimore counties, but immediately adjacent to Baltimore city.

We were successful in obtaining the repeal of the tax on stocks of municipal corporations, which amounted to upwards of $100,000 a year and is a capitalized saving of over $2,000,000 for Baltimore city.

We were enabled to require the United Railways, occupying area in the streets of Baltimore, to pave within that area and giving the city authorities control of the method and construction of the paving in the railway area. This, it is estimated, is worth $1,500,000 to the tax-payers.

A fuller and more detailed account of the legislation obtained by the city in the session of 1914 will be found set out in the report of the City Solicitor, a part of which is incorporated herein.

FINANCIAL.

The City Comptroller's books, which are the general books of the city government, indicate that a balance of $2,641,771.52 was brought forward from 1912's accounts, which, with receipts of $23,378,116.70 by 748 receipt warrants, made the total receipts of the city for the year 1913 $26,019,888.22, and during 1913 a total of 19,391 pay warrants were issued, representing an expenditure of $24,381,195.65, leaving on December 31, 1913, a balance of $1,638,692.57 to be carried forward to 1914. which balance has been charged against the City Register, and duly verified by the City Comptroller, by cash in the City Register's office and certified balances in depository banks.

This balance of $1,638,692.57 is largely made up of unexpended appropriations for 1913 and previous years.

The surplus, arising by reason of excess of income received from the estimated revenue over the expenditures and becom-

Note—Anyone specially interested in the city legislation will find full information set out in the report of the City Solicitor, which can be had upon application to his office, either by postal or in person.

ing part of the general revenue of the city for the current fiscal year, was estimated by the Board of Estimates at $733,557.20, and this amount was taken into consideration by the Board of Estimates in the preparation of the tax levy for 1914.

The estimated amount necessary for the maintenance of the city government and the cost of new improvements for the year 1914, as appropriated by the Ordinance of Estimates for the year 1914, is $22,432,349.92.

The estimated receipts from licenses, fees, rents and all other charges, including the amount believed to be collectible from taxes in arrears and also from taxes at fixed rates for the year 1914, total $15,104,923.84. Amount to be raised by taxation at full rate is $7,327,426.08.

Estimating 83 per cent. collectible on $445,869,908, this representing property assessable at full rate, or $370,072,024. The Board of Estimates, on November 26, 1913, stated a tax rate of $1.98 per $100 for the fiscal year 1914 would be necessary to produce the difference between the anticipated expenditures and receipts of the city, the product of the same being $7,327,426.08.

Following will be found a list of appropriations for the year 1913, from which the year's operations were carried on:

SUMMARY OF APPROPRIATIONS FOR 1913.

DEPARTMENTS.	Total, 1913.	From Levy, Etc.	From Loans.
Appeal Tax Court	$69,885 00	$69,885 00	....

Visitors to the Jail	63,550 00	63,550 00	....
Water Department	3,409,650 00	798,890 00	2,610,760 00
Total	$23,412,869 41	$14,893,503 14	$8,519,366 27

The detailed report of the expenditures of the city by the foregoing departments are set out fully in the report of the City Comptroller, and also in the individual reports of the various departments. Any of these reports may be had upon application to the various department heads, or to the City Librarian.

APPEAL TAX COURT.

Taxable Basis of the City of Baltimore for 1914.

Real estate (full city rate)		$352,681,639
Real estate (full city rate) estimated additional		750,000
Real estate (suburban rate)		19,613,033
Real estate (suburban rate) estimated additional		150,000
Real estate (rural rate)		26,887,154
Real estate (rural rate) estimated additional		100,000
Personal—Individuals, firms and foreign corporations	$49,347,004	
Less plant exemption	4,808,735	
		44,538,269
Maryland incorporated companies (estimated)	53,475,114	
Less plant exemption	6,475,114	
		47,000,000
Distilled spirits in bond (estimated)		900,000
Securities (30 cent rate)		191,970,999
Securities (30 cent rate) estimated non-stock corporations.		1,100,000
Deposits in savings banks (estimated) (18¾c. rate)		96,000,000
Total taxable basis		$781,691,094

The taxable basis for 1914 shows an increase over that of 1913 of $39,781,782, a most creditable showing. The increase of $17,000,000 in the full rate real estate class represents an addition of more than 5 per cent. over same item last year. The increase in New York in this class of assessments last year was less than 2 per cent., while Chicago gained only about 1 per cent.

COMPARATIVE STATEMENT OF DEPARTMENTAL APPROPRIATIONS, WITH THE FULL ASSESSABLE BASIS AND THE TAX RATE FOR THE YEARS 1901-1914.

PAVING COMMISSION.

Paving operations in Baltimore have been vigorously carried on during the past year.

Fayette street, from Gay street to eastern city line, has been repaved. Eastern avenue is now partly under contract and the remainder will be put under contract this year. This will give another through street paved with improved material from Jones Falls to the eastern city limits.

Fort avenue has been paved all the way down to Fort McHenry. This is a much-needed improvement and will give a fine driveway to the North German Lloyd steamers and also to Fort McHenry, where we will hold our "Star-Spangled Banner" celebration this summer.

Linden avenue, from North avenue to Richmond Market, is another important thoroughfare which was paved last year.

The foregoing are only a few of the more important streets which have been improved in the last year. The total number of streets on which the Paving Commission carried on operations was one hundred and eleven, which, added to the seventy-six streets (some completely and others partly) improved during 1912, makes the total number of streets or sections thereof amount to one hundred and eighty-seven since the beginning of the operations of the Paving Commission in November, 1911.

As will be seen from the following table, there were laid in 1913, 555,499 square yards of improved paving, or 31.56 miles; while in 1912 there were 375,521 square yards, or 21.34 miles laid; making a total of 931,020 square yards, equal to 52.9 miles.

TABLE A.

STATUS OF THE WORK OF THE PAVING COMMISSION FROM NOVEMBER 11, 1911, TO DECEMBER 31, 1913.

PAVING MATERIALS.	PAVING COMPLETED.					
	Square Yards Paving.			Miles, Average Thirty Feet Wide.		
	1912.	1913.	Total.	1912.	1913.	Total.
Sheet asphalt	216,444.96	212,472.24	428,917.20	12.30	12.07	24.37
Bituminous concrete	16,353.29	62,517.17	78,870.46	.93	3.55	4.48
Vitrified block	96,108.03	170,697.43	266,806.47	5.46	9.70	15.16
Granite block	41,924.78	95,899.89	137,824.67	2.38	5.45	7.83
Granite block repaving, new, concrete base	975.16	7,380.93	8,356.09	.06	.42	.48
Wood block	3,715.25	6,529.84	10,245.09	.21	.37	.58
Totals	375,521.47	555,498.51	931,019.98	21.34	31.56	52.90

Seven and one-half miles of the paving started last year were uncompleted at the end of the year, but have since been completed.

The total expenses, including salaries, for 1913 were $1,527,653.79.

Administrative expenses, construction salaries, testing materials and salaries of four clerks in Appeal Tax Court for collection of paving tax amount to about 5 per cent. of the total amount expended.

The streets in Northeast Baltimore have been pretty generally improved. Some of the streets in Southeast Baltimore and a number of streets in West and Northwest Baltimore will be improved during this year as soon as they can safely be laid after the sewers are completed.

TABLE B.

AVERAGE COST OF PAVING PER SQUARE YARD DURING 1913.

Sheet asphalt, 1½" topping, 1½" binder, and 5" concrete base..	$1 57
Sheet asphalt, 1" topping, 1½" binder, and 6" concrete base...	1 55
Sheet asphalt, 1½" topping, 1½" binder, and 6" concrete base..	1 67
Sheet asphalt, 1½" topping, 1½" binder, and 6" concrete base (railway)...	1 80
Sheet asphalt, 2" topping, 1½" binder, and 6" concrete base....	1 78
Sheet asphalt, 1½" topping, 1½" binder, and 8" concrete base...	1 89
Bituminous concrete, 2" surface, 4" concrete base, and sealing coat	1 30
Bituminous concrete, 2" surface, 6" concrete base, and sealing coat	1 51

Granite block redressed and repaved, bituminous filler, 6" concrete base..	2 58
Granite block redressed and repaved, bituminous filler, 6" concrete base (railway)..................................	2 35

SEWERAGE COMMISSION.

The Sewerage Commission in 1913 spent $3,875,000. One hundred and thirty-nine miles of sewers, drains and house connections, varying in size from five inches to twenty-nine feet, were laid, and 1,541 catch-basins installed.

The construction of the Jones Falls Conduits, from a point one hundred feet south of Baltimore street to the chamber at the entrance to the tunnel between Biddle and Chase streets, has been completed. This work, 5,484 feet long, redeems 428,300 square feet of land in the center of the city, eliminates ten street bridges and one double-track railroad bridge; and, in addition, makes possible the redemption of 175,000 additional square feet of land and the elimination of two additional railroad bridges. This was a most difficult piece of work—in the bed of a running stream with a good many sudden floods.

The big 29-foot tunnel, diverting the Falls from in front ot Union Station, is about 75 per cent. completed. This is the biggest drainage tunnel in the world. The construction of this tunnel effected a large saving in eliminating the long bend in the Falls, shortening the construction about seven hundred feet and giving a large quantity of excellent rock from the tunnel for the concrete necessary in the construction, thus securing a much lower contract price for the work.

The three 27,500,000-gallon pumps at the Sewerage Pumping Station, which were put in operation by me on January 31, 1912, have worked in a most perfect manner, the Sewerage Engineer reports, and were one of the means of relieving our harbor of the bad odor that it had had for years.

Extensions have been made to the Disposal Plant at Back River and there are now over 30,000 houses connected with the sewers and draining to this plant.

The contract for the Fallsway Viaduct, to raise the driveway over the Falls from Madison street to the intersection of Eager street, Chase street and Guilford avenue, and over the crossing of the Northern Central Railway Company, was awarded last year, and will be completed this summer. The contract price is $190,693.15. This covers the superstructure over the roof of the conduits. Foundations for the viaduct were constructed in the roof of the conduits at a cost of $25,000.

HEALTH.

The wide publicity given the comparatively small number of cases of smallpox has been detrimental to the city's hotel and business interests. Many business men from other cities, about to visit Baltimore, either have deferred their visits or gone to other cities.

The new home for the superintendent at Sydenham has been completed and is an attractive addition to the group of buildings at Sydenham. The new hospital unit at this point is now under construction.

Additional milk and dairy inspectors were appointed last year and the milk situation is now said to be improved.

The examinations of the water at Loch Raven and Lake Roland were continued through the year and the water found of good quality.

Food inspections at the wharves, markets, stores, abattoirs, slaughter houses and bakeries were carried on as usual, with the result that 656,927 pounds of foodstuffs and 634 carcasses of cattle, sheep, hogs and calves were condemned.

During the year 16,536 properties were connected with the sanitary sewers.

CITY ENGINEER.

Under the supervision of the City Engineer the Fallsway, between Baltimore and Bath streets, has been paved and opened to traffic; and the second section, between Bath and Madison streets, is now under contract and nearing completion, as is also the viaduct.

The first section of the Key Highway, the new waterfront street, has been paved and is now open to the public.

Edmondson avenue, from Gwynn's Falls to the western city line, has been paved with bituminous concrete. Charles Street avenue, from University Parkway to Stratford road, has been parked and repaved. Pratt street, from President street to Central avenue, has been widened and paved. Ellicott street, from Pratt street to Lombard street; Hollingsworth street, from Lombard street to Pratt street; and St. Paul street, from Lexington street to Franklin street, have been repaved.

The Ostend Street Viaduct over the Baltimore and Ohio Railroad has been completed and opened to traffic, and Ostend street has been repaved to Ridgely street, making a complete connection of improved paving from Charles street to Ridgely street; and the Lee Street Viaduct has also been completed. Both these viaducts were completed within a year.

The question of putting down concrete sidewalks by the property-owners is one which should be fairly dealt with by the general public. Objection is often raised by the property-owners to this requirement. When the city puts down an improved street paving, and thus adds to the value and appearance of the properties along the street, the property-owner should not object to contributing his share toward a greater improvement in putting down a concrete sidewalk. It not only adds to the value and appearance of the property, but is really a matter of economy, because a concrete sidewalk properly laid will last a lifetime.

The city now has its own garage for the storage and repair of its automobiles and is enabled to effect a big saving in the cost of storing cars and the purchase of supplies. The garage is located in the basement of the old Polytechnic School on Courtland street.

COMMISSIONERS FOR OPENING STREETS.

There were more street openings completed and more paving done in the Annex in the last two years than was done by previous boards during the twenty years preceding. This is an accomplishment and a display of energy which I desire especially to commend.

A great number of specially important street openings were gotten through in the past year.

Chief among these is Hilton street (formerly called Eleventh street), running from the Frederick road north to Edmondson avenue, thus giving a much-needed thoroughfare north and south between these two important avenues. The grading has been completed, necessitating in one place a fill of thirty-seven feet, and the paving will be under way in the near future.

Other important street opening and widening proceedings accomplished during the past year are: Twenty-fifth street, from Greenmount avenue to Harford road; Belair road, from North avenue to the eastern city limits; Green Spring Parkway; Woodberry avenue, west from Railroad avenue; Ostend street, from Howard street to Plum alley; Aisquith street, between Baltimore and Fayette streets, converting what was formerly practically nothing more than an alley into a wide, modern thoroughfare; Hillen street, between the Fallsway and High street, will relieve the congestion now there. The Key Highway, the new waterfront street, was condemned and opened by this Department. Covington street, between Ostend and Gittings streets, has been opened and is now being graded and paved.

Sixty-two streets, or sections of streets, were paved by this Commission during the past year, covering a total of 121,180 square yards, or about 6.5 miles, of varying widths.

More beneficial legislation was obtained by the city from the Legislature of 1914 than was ever obtained from any Legislature in Maryland before.

There were twenty-five Acts passed by the Legislature of especial interest to the City of Baltimore. The more important of these are:

To compel railroad and railway companies to pay for new paving in railway area. This, it is estimated, will be worth $1,500,000 to the tax-payers of Baltimore.

Exempting city stock from taxation by the State. This will mean a saving of considerably more than $100,000 a year.

Requiring all purchases of property by every department of Baltimore city, exceeding $500, to be approved by the Board of Estimates. This will effectually prevent any municipal department from entering into any such bargain as the "Warren Deal."

Providing for the consolidation of the engineering departments of the city by creating a chief engineer and making him the final arbiter of all disputes between the various departments. This measure will prevent the inconvenience and annoyance to the public and the useless expense of frequently tearing up the streets and the duplication of other work by the various departments. This Act also makes the City Surveyor a sub-department under the chief engineer at an annual salary of $3,000, thus abolishing the fee system, so far as it relates to that office.

Providing for more speedy procedure for the opening of streets.

Enlarging the powers of the Appeal Tax Court. Improving the method of collecting taxes and, at the same time, abolishing the 3 per cent. penalty and the $3.50 Surveyor's charge for taxes in arrears.

Giving the city authority to decide upon the kind of ballast or foundation under railway ties in the streets.

Carrying out the provisions of the constitutional amendment of 1912, under which property needed for a public improvement may be taken promptly, without waiting for the termination of litigation over the amounts of damages or benefits.

Providing for a new sewerage loan of $3,000,000.

Appropriating $75,000 for "The Star-Spangled Banner" Centennial.

Amending the general condemnation law, which was prepared by the City Solicitor and passed by the Legislature of 1912.

Exempting five hundred dollars' worth of household furniture from taxation.

Relieving the city from the payment of the salaries of the physicians connected with the Bureau of Statistics, thus saving the city $2,500 per year hereafter.

Providing a Bureau of Municipal Liens.

Authorizing the publication of legal advertisements in the *Municipal Journal.*

Authorizing the payment of benefits assessed for opening streets in five annual instalments, which will be of great relief to many persons assessed with such benefits.

The Roads Loan Act, under which the city obtained $1,600,000 for a new Light Street Bridge and for paving in Baltimore city.

THE ROADS LOAN FIGHT.

The fight to obtain the $1,600,000 for a new bridge and paving in Baltimore city was a most bitter one. The State Roads Commission Bill provided for $5,000,000 for the counties and $1,000,000 for Baltimore city. This not only cut down Baltimore city's share to 16⅔ per cent., instead of 20 per cent. which it has received from prior loans, but it gave to certain counties, represented by friends of Senator Smith, very much larger appropriations, in proportion to size, than the Western Maryland counties. This bill was introduced by Mr. Veasey.

After the introduction of the Veasey Bill, I succeeded in inducing the Democratic Advisory Committee, headed by Senator Gorman, to approve a $7,000,000 loan, of which $2,000,000 was for the bridge and for paving in Baltimore city, instead of $1,000,000, for paving alone, as provided in the Veasey Bill. This bill was introduced by Senator Price, who took the precaution to mark the bill "By Request," and who subsequently opposed that bill; and, after the Democratic caucus had been called and failed to come to any agreement, Senator Price drew another bill providing $1,200,000 for a new bridge and paving in Baltimore city.

Our city Delegates and Senators thereupon unanimously agreed that the city would not accept the $1,200,000, but would fight for $2,000,000. This proposition, however, was defeated, but the city finally got $1,600,000.

This result was accomplished entirely by the fight made on behalf of the city by the City Solicitor and the City Delegation in spite of and against the most

"BITTER AND UNFAIR OPPOSITION OF THE 'SUN.'

The following is quoted from the City Solicitors report:

The *Sun* not only tried to prevent the city from getting more than $1,200,000, but did so in the most unfair way. So viciously and unfairly did the *Sun* fight the city in this matter, by cartoons, insinuations and false statements, that it was the subject of comment in the circulars of the leading banking house of Nelson, Cook & Company. In their circular of March 28, 1914, they say:

> The *Sun* has waged a most persistent opposition to the efforts of our city administration to obtain for Baltimore city as large an amount as possible to be expended on improved roads and pavements in the city limits. If to its efforts is due the failure of the city to receive $1,000,000 for street paving and to have only $200,000 allotted for these purposes, the *Sun* is welcome to any satisfaction it may get out of it, but in the final analysis the result has been, as we view it, that the course pursued by the *Sun* in this matter has not been advantageous to the City of Baltimore or its people.

'SUN' FOUGHT THE CITY ON OTHER MEASURES.

On every measure of importance to the city the *Sun* stood against the City of Baltimore. It fought, by editorial and cartoon and news column, the effort to have a fair Senatorial primary by which a Democrat's vote in Baltimore would count as much as it does in one of the counties. It fought the effort to extend the city's limits. It viciously fought the bills which were passed for improvement in the proceedings for opening streets.

When a hearing was held before the Legislative Committees on the bill to compel the United Railways to pay for paving in the railway area, the *Sun* gave three-quarters of a column to the argument of Mr. Robert Crain for the railway company, and very little space to the Mayor and the City Solicitor and the Chairman of the Paving Commission, who spoke on behalf of the city, and headlined the discussion as though the city was trying to do something unfair and was trying to break its contract. The headlines were (*Sun*, February 11, 1914):

PLEADS FOR FAIR PLAY

Robert Crain Presents United Railways
Side of Paving Case.

WANTS CONTRACTS OBSERVED

Mayor Preston and City Solicitor Field
Urge Bill Requiring Paving Between
the Tracks.

The *Sun* even tried to stir up opposition to the bill to repeal the tax on city stock.

In the *Sun* of February 20, 1914, the possible defeat of this bill was heralded as follows:

> Apparently there are breakers ahead for the bill, *fathered by Mayor Preston,* which exempts all State, county and municipal securities from State taxation. * * * Heretofore on numerous occasions efforts

have been made to secure legislation which would exempt city stock from the payment of State taxes, but always the counties have interposed objections—a fact which today led one of the city Senators to remark that the whole aim of the counties seems to be to hold the city up for everything possible.

This Act, which will save the tax-payers of Baltimore more than $100,000 per year, was an act of simple justice to Baltimore city.

NO EXCUSE FOR 'SUN'S' OPPOSITION.

When persons from the counties opposed the mass vote, and the extension of the city's limits and giving a fair amount of the Roads Loan to Baltimore city, they had at least an excuse for their opposition. They believed, or pretended to believe, that it is necessary for the protection of the rights of the counties to refuse full and equal rights to Baltimore city for fear that the city, if it once obtained the power, would do to the counties what the counties have been doing to the city.

But there is no excuse for a newspaper located in and deriving the bulk of its revenues from Baltimore city to oppose the growth of the city by the extension of its boundaries, to oppose a fair primary in which a city man will have an equal vote with a county man, or to oppose getting a fair share of the Roads Loan for Baltimore city.

Charles H. Grasty's fight against Baltimore is simply a production in real life of the fable of the frozen snake which a man took into his bosom and warmed into life, and which with its venomous tongue stung the breast that had nourished it. There was no excuse for the snake biting the bosom that had warmed it. It simply did so because it was a snake.

ACTS PASSED SUBSTANTIALLY AS PRESENTED BY CITY SOLICITOR.

Of the twenty-five Acts above mentioned, twenty-one were prepared by the City Solicitor and passed as administration measures. All of these Acts were passed practically as drawn by the City Solicitor. No amendments were made to any of them, other than minor amendments agreed to and prepared by the City Solicitor, except the amendment to House Bill No. 83, which was prepared by Mr. Hall and which struck out the provision ratifying the market ordinance. The adoption of this amendment was exultantly given large space in the *Sun* as a defeat of the administration.

Since the adjournment of the Legislature the Court of Appeals has decided that the market ordinance is valid throughout, so that it turns out that it was entirely unnecessary to have the ordinance ratified by the Legislature, and the Grasty-Hall victory over the administration proves to be a barren one.

LEGISLATURE GAVE THE CITY PRACTICALLY EVERYTHING ASKED FOR, EXCEPT THE BOROUGH BILL.

The only measures of any importance to the city which failed to pass were the Borough Bill and the bill to require the Gas Company to lay its pipes ahead of the new paving.

The bills giving the Mayor the power to appoint the Police and Liquor License Boards were party measures rather than administration measures and ceased to be of any particular importance after your public announcement that you did not wish them to go into effect until May, 1916, since another Legislature will meet in January, 1916. It was, of course, always recognized that it would be very difficult to secure the passage of the Borough Bill; and the bill relating to the Gas Company was not so important, because the city practically has that power under the present law.

Your administration obtained from the Legislature of 1914 more beneficial legislation for Baltimore city than was ever obtained from any Legislature before. Notwithstanding this unparalleled record of achievement in the Legislature of 1914, the following unvarnished lie was published in the *Sun* of April 7, 1914:

> The administration has failed on nearly all the really big bills which it hoped to pass, especially those bills which were calculated to increase its power, and which were so close to its heart."

SUMMARY OF THE WORK OF THE LAW DEPARTMENT FOR 1913.

Two hundred and twenty-one written opinions were prepared and sent to the various departments of the city.

Fifty-eight ordinances and resolutions were prepared by this Department.

One hundred and seventy-six ordinances and resolutions were examined for the Mayor's approval.

Two hundred and twelve cases were instituted against the city during 1913, in which pleadings were filed and other proper attention given by this Department.

Fourteen cases in the Court of Appeals were argued orally, and briefs prepared and filed therein.

One hundred and thirty-eight cases were tried, or otherwise disposed of, in the lower courts during the year.

Fifty-four suits were brought in the courts by the city upon tax bills. This does not include a large number of suits for taxes brought in the People's Court.

Twenty-six proceedings were instituted in the courts of Baltimore city for the condemnation of property for schoolhouses and other public purposes.

One hundred and twenty-eight claims against the city for damages were examined and passed upon, either settled or refused.

Two hundred and thirty-three appeals from the award of damages or assessment of benefits by the Commissioners for Opening Streets were filed during the year.

Twenty-six appeals from the Appeal Tax Court were filed during the year.

Three hundred and forty-four deeds were prepared and settlements made for damages and benefits involving an amount of $675,045.01, for the opening or closing of twenty-two streets.

Twelve large volumes of abstracts of title for various properties, street opening cases, schoolhouses, etc., were bound during the year.

Two hundred specifications, and seven hundred and sixteen contracts and bonds were examined and passed upon for the work of the various departments.

SCHOOLS.

The handsome new Polytechnic Institute on North avenue, at Calvert street, was completed during the year and is now being occupied. The new sixteen-classroom school to replace the old School No. 6, Ann street near Fleet; new School No. 99, North avenue and Washington street; new School No. 27, Chester and Fayette streets, with twenty-four classrooms, and the new School No. 22, Hamburg and Scott streets, and a three-story building with ten rooms and assembly hall added to No. 99, were all completed during the year and are now being occupied. There are now a total of 161 buildings occupied for school purposes.

These buildings are thoroughly modern in every way and have everything that is necessary for the health, safety and comfort of teachers and pupils.

A tract of land at Catonsville has been purchased for purposes of a parental school, and plans are now being prepared for the buildings to be erected thereon.

The enrollment shows an increase of 3,188 over 1912, the total number entered in 1913 being 85,555 in the day schools and 5,234 in the night classes in 1913, as compared with 4,702 in 1912. The School Board has in preparation plans for the wider use of the school buildings for public lectures, entertainments, etc., in accordance with a general public demand.

The appropriation for school purposes for the year 1913 was $1,857,644.

FIRE DEPARTMENT.

Ten automobile tractors have been added to the equipment of this Department. The repair shop has been equipped with tools to take care of general departmental work.

Rigorous examinations have been made of factories and other buildings, and regulations of building code enforced, resulting in a material reduction of fire hazards. The installation of red electric lights on fire alarm boxes has been extended.

By the addition of one boiler at the High Pressure Pumping Station we have been able to furnish heat, and electricity for light and power for all the public buildings in the central part of the city, thus making a very large saving in these items.

Total appropriation to the Fire Department for 1913 was $1,093,099.01.

INSPECTOR OF BUILDINGS.

Permits were issued in 1913 for the erection of new buildings, additions, alterations, etc., to the value of $16,004,639.80, an increase of $1,525,265.90 over 1912.

Four new schools, the Municipal Garage, and sewer connections with City Hall, Court House, schools, markets and engine houses were completed during the year and the work on the new School No. 83, the Recreation Pier, improvements at Bay View and Sydenham, the grading at the Polytechnic Institute, and numerous other improvements are all being done by this Department and rapidly nearing completion.

Electric motors, boilers, gas and gasoline engines, etc., of an aggregate of 15,000 horsepower were installed during the year 1913.

The Building Code gives the right of appeal from decisions of the Inspector of Buildings in matters pertaining to building construction, and it is gratifying to note that there have been no such appeals in the last year. This is conclusive evidence of the harmonious conditions existing between the Inspector of Buildings and the general public.

WATER DEPARTMENT.

The pitometer survey of what is known as the Western High Service District showed that defective house fixtures were responsible for 60 per cent. of the water leakage; that 20 per cent. was due to broken supply pipes, and the remaining 20 per cent. due to leaks from mains and valves in the street construction.

The new Loch Raven Dam is about 90 per cent. completed, and it is hoped that it will be turned over by the contractor to the city very shortly. The bridges and roads being constructed in the Gunpowder water shed are progressing, and will be entirely completed this summer.

The filtration plant is under contract and in course of construction; it is not, however, being constructed as rapidly as we had hoped.

HARBOR BOARD.

The odors and gases have been eliminated almost entirely from the harbor by the operation of the sewerage system, and this has lessened the dredging of the harbor to an extent of 1,000,000 cubic yards during the past year.

The main channel has been widened ninety feet from below Elevator "C" to a point east of the North German Lloyd pier, 17,856 cubic yards being removed in this operation. The twenty-four foot channel from the main channel into the mouth of Skinner's Dry Dock, and the twenty-foot channel, both ninety feet wide, and the dredging for the Recreation Pier, were all completed last year.

The construction of the sub-structure of the Recreation Pier and the grading and paving of the adjacent streets were completed by the Harbor Board.

DEPARTMENT OF STREET CLEANING.

The Street Cleaning Department has again demonstrated its efficiency by carrying on an increased amount of work with an appropriation of $822,658.22, the same as for 1912, and turning back into the city treasury an unexpended balance of $71,902.55.

The Department last May purchased a 7½-ton automobile garbage truck, at a cost of $5,000, which has proven very satisfactory. This truck carries six cartloads of garbage and relieves long hauls by horses, such as from Forest Park to the scows at Spring Gardens. Baltimore is the first city in this country to us an automobile truck for this purpose. The estimated cost of operating it is about five dollars a day.

During the past year the Department assumed the duty of sweeping and flushing the markets and keeping clean thirty-eight miles of new improved streets, and this has been most effectively done. Wire receptacles for paper and refuse have been placed in all markets, and this has facilitated the work of keeping them clean.

PARK BOARD.

The Park Board during the year completed the purchase of the Bergner property, consisting of thirteen acres, on North avenue. This will make a direct connection via North avenue between Gwynn's Falls and Druid Hill Parks.

Nine properties on Covington street, the back yards of which extended back to Federal Hill Park, have been acquired. These properties, which have been an eyesore for many years, will be razed and converted into playgrounds and tennis courts.

A new concrete bridge costing $16,000 has been erected in Wyman Park.

The Patterson Park addition has been very extensively improved. This addition consists of about ten acres of land, and will be used for baseball, football, etc.

The total appropriation to the Park Board was $756,411.27 for 1913.

The Board now has under its jurisdiction 2,288 acres of land, which are divided into fifty separate and distinct parks and squares.

SUPERINTENDENT OF LAMPS AND LIGHTING.

The extensive paving operations, carried on last year and now being carried on, have placed on this Department the burden of rearranging its lamps, and in a great many cases, installing additional equipment; 1,465 new lamps having been placed in service, bringing the total now in use up to 13,830 lamps of various classes.

The "White Way" lighting system (inaugurated by this administration) has been installed on the Fallsway and extended north on St. Paul street to Centre street. Ornamental lamps have been installed around the Western Female High School, around the Polytechnic Institute, and on the streets surrounding the new Recreation Pier and the Sewerage Pumping Station.

Six thousand two hundred and ninety-seven samples of coal oil were tested and all found to be up to the required legal standard and flashing point of 120 degrees Fahrenheit.

The contract price for gas for street lamps was reduced 2½ cents per 1,000 cubic feet, this making a saving of $4,000 for the year, and $6,000 per year has been saved by the contract for the maintenance and operation of gas and naphtha lamps. All city bridges have been equipped with new and improved lighting systems.

ELECTRICAL COMMISSION.

The Electrical Commission in 1913 laid 1,660,552.90 duct feet of conduits at a construction cost of $503,477.34. There were also constructed 252 manholes, 57 junction boxes, and 466 distributing boxes; 215,138.85 feet of cable were installed. This is the greatest amount of work ever done in any one year in the history of this Department.

The paving operations being vigorously carried on, in a great many instances, necessitated a deviation from the logical system of extending the conduits, but in order to avoid the tearing up of the improved pavements this course is most advisable.

The Department, through its own staff of physicians, gives surgical aid to its employees injured in the service. This surgical attention last year cost $1,182.90, whereas, if employer's liability insurance were carried, it would cost approximately $10,000 a year. Under this plan of surgical aid there has not been one suit against the city for damages out of a total of 198 accidents.

The revenue to the city from the conduit system last year amounted to $120,800.46, and in addition to this return we are eliminating from our street unsightly poles and dangerous overhead wires.

CITY FORESTER.

The Forestry Department is a new institution in Baltimore, and was inaugurated by this administration. Its purpose is to encourage the planting of trees along the highways and to assist and advise in the treatment and care of trees. One thousand trees were planted by the Department last year along boulevards, public drives, around schools, libraries, etc., and 851 permits were issued to private individuals to plant trees, under the supervision of the Department. Two thousand seven hundred permits were issued to private individuals for pruning trees, while 1,500 trees were pruned by the Forestry Department.

In addition to the planting and care of trees, there have been parkings placed along numerous streets, and these also are watered and grass cut by the Department. Three thousand trees were sprayed in an effort to wipe out leaf-eating insects.

Plans have been prepared for a planting plan of the 440 acres of property in the Gunpowder Watershed.

Tree planting and care is a most important phase of city beautification, and with proper co-operation on the part of the public, good results can be obtained.

SUPERVISORS OF CITY CHARITIES.

The new kitchen and dining-room at Bay View, costing $75,000, were completed last year and are now in use. Twelve thousand five hundred dollars was appropriated for a new and modern cow stable and barn. This, also, has been completed during the year and is a creditable addition to the improvements at Bay View.

The new bungalow for the physicians of the Tuberculosis Hospital, costing $5,000, and a sprinkler system and fire doors have been completed, and numerous other repairs and alterations made to the main building at a cost of $29,000.

The total appropriation to the Supervisors of City Charities for the year 1913 was $535,161.34, and this was expended in salaries, expenses at Bay View, new improvements, hospitals, care of insane, etc.

CITY JAIL.

There has been inaugurated at the City Jail a school for men and women confined there. It was found that a great many persons committed to the Jail are unable to read and write and the establishment of a school will be of material benefit to these unfortunates.

During the year 1913 there were 10,079 persons committed to the Jail, while in the same year 10,057 were released. The average daily number of prisoners confined was 571 in 1913, as against 481 for 1912.

TOPOGRAPHICAL SURVEY COMMISSION.

The Topographical Survey Commission continues to co-operate with and exercise supervision over the work being done in the city by the State Roads Commission, thus facilitating the speedy completion of the work.

The Frederick road and the Reisterstown road and Hanover, Cromwell and Lights streets have all been improved by the State Roads Commission with the co-operation and assistance of the Commission.

Plans are being prepared for the opening and improving of a driveway known as Mill road to connect Hampden and Woodberry, and also for the Ellicott Driveway to run along Gwynn's Falls and connect the Frederick road with the Franklin road.

Plans have also been perfected for the final link in the Alameda, so as to make a direct connection between Druid Hill and Clifton Parks; Spring Garden avenue, from Hanover street to Light street; Hamburg street, from Bush street to Stockholm street, and numerous other important street openings and improvements.

The Department has completed the compilation of a new and complete map of the city on a scale of five hundred feet to one inch, and have in course of construction a complete city and property map on a scale of two hundred feet per inch. Each of these maps will be placed on sale to the public.

FREE PUBLIC BATH COMMISSION.

Sixteen public baths, laundries and comfort stations are now maintained. In 1913 there were 1,047,954 patrons at the public baths and laundries, and 861,000 at the two public comfort stations. The fees for the year amounted to $22,229.84, showing an increase in receipts over 1912 of $3,304, and an increase of 156,000 bathers over 1912.

Plans have been prepared for the erection of an additional comfort station near Lexington Market and this is expected to be finished this year.

THE PENNSYLVANIA RAILROAD COMPANY'S TERMINAL PLANS.

The Pennsylvania Railroad terminal situation remains unchanged. I am informed that until after a determination of the application of the railroads for an increase in the freight rates, no plans for the Calvert Terminal can be concluded.

I am also informed that the Pennsylvania Railroad Company is making new plans for the Baltimore terminal, which include electrification in some form.

Plans have been adopted for electrification in Philadelphia; the installation is complete in New York on both lines of the Pennsylvania and the lines of the New Haven as far as Stamford, Conn., a distance of 33 miles, both for switching and direct shipment, and if this were not sufficient proof of the practicability of electrical railroad operation, it will be found in the recent installation of electricity on the lines of the Chicago, Milwaukee and St. Paul Railroad across the Rocky Mountains, a distance of 440 miles. And this for the reason that the railroad found electrical power more economical than steam.

I strongly advise that electrical operation of their freight yards in Baltimore be insisted upon.

FACTORY SITES.

The establishment of factories in Baltimore is largely a question of inducements. It would help us very much if we could have on the water front, near the railroads, sites for factories, where the city might utilize it for the encouragement of manufacturing enterprises.

Under our Charter it is illegal to purchase land for this purpose. I believe the same result can be obtained, however, by acquiring land in shallow portions adjacent to the Spring Gardens for a city dump. This could be bulkheaded in and refuse ashes from the city deposited there. In a short time this would develop into a large area or available land, and could be sold, rented or donated for factory purposes, as might be deemed advisable.

THE RELAYING AND REPAIR OF FOOTWAYS.

When I was elected Mayor in May, 1911, there was practically no effective legislation on the subject of relaying or repair of footways. The practice was that the Police Department would give notice of defective footways to the City Engineer, and the City Engineer would in turn give notice to the property-owner, and there the matter stopped. During one year, there were as many as 6,000 notices sent out, but attention was paid to but very few of these, and compliance with the notice was not required in a single instance, for the reason that the ordinance then in effect was very loosely drawn, and was incapable of effective enforcement.

I thereupon, early in the present administration, prepared an enforceable ordinance, requiring property-owners, upon notice from the City Engineer, to put down new footways and to give the City Engineer a discretion as to what material he would require for the repair of the footways. This we have found to be most efficient, with the result that the city has either laid footways on behalf of property-owners, charging the cost against the property-owner, or has required the owner himself to put down a new footway. This, if continued vigorously, will give Baltimore noticeably excellent footways.

The necessity for this has been due to the fact that the footways have been allowed by Baltimore city to get into a deplorable condition, and when this condition was added to by sewerage operation in making connections, some drastic action became necessary to improve the situation, which action has been taken and with good results.

BRIEF SUMMARY OF YEAR'S WORK.

Fallsway paved and open to traffic, from Baltimore to Madison streets.

First section Key Highway open to public.

Edmondson avenue, from Gwynn's Falls to western city line, has been paved with bituminous concrete.

Ostend Street Viaduct and Lee Street Viaduct constructed and opened to traffic within a year.

Municipal Garage opened and operating successfully.

Bureau of Information and Complaints established in rotunda of City Hall.

Forestry Department showing good results.

MUNICIPAL JOURNAL rounds out its first year of existence with excellent results.

Daily reports are now submitted to the Mayor by all departments.

Discounting city bills—saving $10,000 a year.

By an expenditure of approximately $3,500, an unused floor space on the fourth floor of the City Hall, 40 by 140 feet, was made available for city purposes, effecting a saving of $7,000 annually, if the city were required to rent such quarters.

Hilton street, extending from the Frederick road to Edmondson avenue, has been opened and graded, and paving will be begun in the near future.

Grading of Thirty-third street, Charles street to Hillen road, a most important work.

More work done by the Commissioners for Opening Streets in last two years than by previous commissions in preceding twenty years.

Widening of Aisquith street, between Baltimore and Fayette streets, giving a broad thoroughfare in place of a small, narrow street, and relieving Fayette street from car line, from Gay to Aisquith streets.

Fallsway assessments sustained by the Court of Appeals.

Harbor odors and injury to boats have been eliminated by the operation of the Sewerage Pumping Station and Disposal Plant.

The paving of the Frederick road, between Bentalou street and the western city limits, has been practically completed.

Grading of Pennsylvania avenue, Reisterstown road and the establishment of the Park Circle at Park Heights avenue.

Initial appropriation of $100,000 as a nucleus for Civic Center project.

Creation of Municipal Insurance Fund.

Third and fourth edition of the "Baltimore Book."

Condemnation of Charles Street Plaza at Cathedral Place, University Parkway and Thirty-seventh and Thirty-eighth streets.

Condemnation of plaza at St. Paul, Hamilton and Courtland streets, and extension of Courtland street.

Ordinance putting the markets on a self-supporting basis, sustained by the Court of Appeals.

More important legislation from the last Legislature than from any previous Legislature. Chief among the bills passed are:

Compel railroad and railway companies to pay for paving in railway area. This, it is estimated, will save the tax-payers of Baltimore $1,500,000.

Exempting city stock from taxation by State, thus saving $100,000 a year to the tax-payers.

One million six hundred thousand dollars for new Light Street Bridge, and paving in Baltimore city.

Requiring all purchases of property by city departments, exceeding $500, to be approved by Board of Estimates.

Providing for consolidation of engineering departments.

More speedy procedure for opening streets.

Abolishing 3 per cent. penalty and $3.50 surveyor's charge for taxes in arrears.

Giving city authority to decide upon kind of ballast under railway ties.

Three-million-dollar Sewerage Loan.

Seventy-five thousand dollars for "Star-Spangled Banner" Centennial.

Exempting $500 of household furniture from taxation.

Providing a Bureau of Municipal Liens.

Authorizing publication of legal advertisments in MUNICIPAL JOURNAL.

Senatorial Primary Election Law (mass vote) introduced in the Legislature, and State-wide campaign, so that Baltimore might have a voice in the selection of candidates for the United States Senate.

State campaign for the extension of the city limits, so that Baltimore might take its rightful place in the list of American cities, according to population and area. Bill introduced in the Legislature to carry this plan into effect.

The Pennsylvania Railroad terminal plans are in abeyance on account of the stringency in the money market, I am informed, and the difficulty of raising money in advance of the decision of the Interstate Commerce Commission on the rate increase.

Paving tax sustained by the Court of Appeals.

More general use of school buildings for neighborhood meetings, educational work, lectures, etc.

Purchase of the Carroll Mansion in East Baltimore. This historic building will be preserved and used for educational purposes.

Fireboat "Cataract" rebuilt and launched.

Three new schools dedicated.

The City Register, the City Comptroller and the Auditor of City Accounts have made an extended examination of bookkeeping in other cities. They visited New York, Philadelphia, Boston, Cleveland and Chicago, and found that the system of accounts in Baltimore compares very favorably with and is maintained at much less expense than any of the cities they examined.

They recommended that only minor changes be made in our system of accounts.

I am gratified, therefore, to report that after an expert examination, the bookkeeping system of the city is quite equal to that of any other advanced city in the country.

Very respectfully,

James H Preston

Mayor.

Annual Report

DEPARTMENT OF REVIEW AND ASSESSMENT

SUB-DEPARTMENT

APPEAL TAX COURT

CITY OF BALTIMORE.
1797

FOR THE YEAR 1913

BALTIMORE
MEYER & THALHEIMER
CITY PRINTER

1914

ANNUAL REPORT

OF THE

DEPARTMENT OF REVIEW AND ASSESSMENT

SUB-DEPARTMENT

APPEAL TAX COURT

CITY HALL

BALTIMORE, January 1, 1914

To the Honorable the Mayor and City Council of Baltimore.

GENTLEMEN—We beg herewith to submit a report of this Sub-Department for the year ending December 31, 1913.

The taxable basis for 1914 is shown by the following statement delivered to the Board of Estimates and to the City Collector on October 1, 1913. It includes, according to custom, besides the various items of property upon which a levy is directly made by the Mayor and City Council, an estimate for 1914 of the amount of deposits in savings banks upon which the local tax of 18¾ cents per $100 is collected by the City Collector under direct levy by the General Assembly (Code, edition of 1912, Article 81, Section 91).

The statement also includes, according to custom, estimates of the real estate and net assessed value of the shares of national banks and Maryland corporations and of distilled spirits in bond, the amount and valuation of which several species of property are determinable, under the law, as of January 1, 1914.

Real estate (full city rate)		$352,681,639	
Real estate (full city rate), estimated add'l		750,000	
Real estate (suburban rate)		19,613,033	
Real estate (suburban rate), estimated add'l		150,000	
Real estate (rural rate)		26,887,154	
Real estate (rural rate), estimated add'l		100,000	
			$400,181,826
Personal—Individuals, firms and foreign corporations	$49,347,004		
Less plant exemption	4,808,735		
		$44,538,269	
Net value of shares of Maryland incorporated companies (estimated)	$53,475,114		
Less plant exemption	6,475,114		
		47,000,000	
Distilled spirits in bond (estimated)		900,000	
Securities (30c. rate)		191,970,999	
Securities (30c. rate), estimated, non-stock corporations		1,100,000	
Deposits in savings banks (18¾c. rate), est.		96,000,000	
			381,509,268
Total			$781,691,094

The form in which we present the table of the basis for 1914 differs from previous tables in that it shows separately the estimated portions of the several classes of real estate. These estimates cover the new improvements of Maryland corporations which had not been completed by October 1, 1913, but which, in the opinion of the assessors, would be sufficiently advanced by January 1, 1914, to justify their assessment for 1914. Under decisions of the courts, the real estate of Maryland corporations is not subject to the October clause of the City Charter, but is assessable as of January 1.

REAL ESTATE ASSESSMENTS

The basis of 1914 exceeds that of 1913 by $39,781,782. The result surpassed our own expectations. The increase of $17,623,478 in full rate real estate represents an addition of more than 5 per cent. over the same item last year. This is a better showing than that of New York, where the increase for 1914 is less than 2 per cent.; and in Chicago, which gained only about 1 per cent. over the previous year. Real estate of all classes now aggregates over $400,181,826, while the assessment of all forms of personal property reaches $381,509,268. Of the increase in full rate real property, about $3,000,000 represents property raised from the suburban and rural rates, thus indicating the extent to which the city is gaining through the improvement of streets in the Annex.

Regarding petitions for abatement on real property, there was an increase in the number of applications and in the aggregate amount of abatements, although there was a decrease in the number of applications favorably acted upon.

An idea of the work which has been accomplished by the Appeal Tax Court since the great fire of 1904 may be gathered from a comparison of the real estate basis for 1904, when it was $264,160,549, with that of 1914, when it is $400,181,826. In the same period, personal assessments have risen from $227,494,112 to $381,509,268.

We have, with the assistance of our special assessors and chief assessor, prepared printed tables for the calculation of valuations of the real property by the unit system. It is our purpose to use these tables in future assessments and also to prepare unit value maps, so that our assessments may be made as scientifically as possible, and so that property-owners may ascertain the method by which the land valuations are determined. The unit system itself has long been used by our special assessors for their own guidance, but without such devices as prepared tables and unit value maps, which, in view of the greater volume of work and the need for expedition in attending to the inquiries of taxpayers, have now become necessary.

We are now engaged upon the task of rewriting our assessment books according to a system by which the annual assessment roll will be prepared by us instead of by the City Collector, as heretofore. Under the new system this roll will be made up new each year—a duplicate copy being prepared at the same time for the use of the City Collector. As a result of this, the ledgers of the Collector will, beginning with

1915, be arranged according to the locality of the property, in place of the present alphabetical arrangement according to ownership. The Board of Estimates has granted us a special appropriation to put these changes into effect. In preparation for this work, we have taken a census of the separately assessed parcels of ground in the city, which shows a total of 127,584, distributed by wards and classes as follows:

WARDS	Number of Lots		
	City	Suburban	Rural
First	5,951	....	....
Second	3,041	....	....
Third	3,296	....	....
Fourth	4,997	....	....
Fifth	3,606	....	....
Sixth	6,108	....	....
Seventh	5,959	....	....
Eighth	6,888	187	528
Ninth	2,625	965	2,368
Tenth	3,656	....	....
Eleventh	3,940	....	....
Twelfth	4,666	939	1,156
Thirteenth	3,387	1,358	2,207
Fourteenth	4,269	....	....
Fifteenth	4,587	1,924	4,486
Sixteenth	4,966	560	1,451
Seventeenth	4,026	....	....
Eighteenth	4,196	....	....
Nineteenth	4,673	....	....
Twentieth	4,487	983	3,018
Twenty-first	4,677	....	....
Twenty-second	3,413	....	....
Twenty-third	3,679	....	....
Twenty-fourth	4,361	....	....
Total	105,454	6,916	15,214

SUMMARY

City	105,454
Suburban	6,916
Rural	15,214
Grand total	127,584

SHARES OF MARYLAND CORPORATIONS

Another interesting feature of the basis is the increase in the net assessment of the shares of Maryland corporations. Our estimates for 1913 was $42,000,000, but the actual assessments returned for the year were nearly $45,000,000; the difference being due to increases secured by us by appeals from the State Tax Commissioner's assessments and pushed to a successful conclusion with the aid of the City Solicitor. This enables us to count on at least as much for the present year, together with a further increase to be expected from the enlargement of corporations and the incorporation of concerns that are now doing business as firms or individuals. Indeed, this tendency to incorporate prepared us to expect a slight decrease in the personal assessment against firms and individuals. We are all the more gratified that the good work of our assessors has more than offset the losses from the incorporation of firms and from the removal and destruction of property.

NEW IMPROVEMENTS

The number of new improvements assessed for 1914 at the full rate is 1,221, and the amount of the assessments is $4,313,842, as against 1,346 new improvements for the previous year, assessed at $4,954,917. This shows a slight falling off both in number and amount. On the other hand there were 440 additions to old improvements assessed at $249,960 for 1914 at the full rate, as compared with 347 additions assessed at $230,450 for the previous year. There has been a substantial increase, however, in the number of new improvements erected in the Annex and assessable at the suburban rate. For 1914 the number is 508, as against 374 for 1913; while the assessments are $1,300,475, as against $1,159,000. There is also an increase in the amount of the assessments for 1914 over the amount for 1913 on additions to old improvements. In regard to improvements assessed at the rural rate there has been a reduction in the number as well as in the amount of the assessment.

PLANT EXEMPTIONS

Plant exemptions (machinery of manufacturers) show an increase in number from 589 for 1913 to 614 for 1914, and an increase in amount from $10,608,257 to $11,283,849.

It will be of interest to show the changes in plant exemptions over a period of years (abstracted from our annual reports of the taxable basis):

YEARS	Firms, Individuals and Foreign Corporations	Domestic Corporations	Totals
1908	$4,412,951	$4,242,632	$8,655.583
1909	4,649,172	4.127,717	8,776,889
1910	4.154,053	4,384,145	8,538,198
1911	4,661,627	4,570,682	9,232,309
1912	4,903.535	5,281,923	10,185,458
1913	4,511,466	6,096,791	10,608,257
1914	4,808,735	6,475,114	11,283,849

It should be noted that these figures were prepared for each year at the time the basis for the following calendar year was made up and therefore were estimated in part. There has generally been a subsequent increase in the exemptions of Maryland corporations and in the total for the year, due in part to applications made after October 1, and in part to transfers made necessary by the conversion of firms into corporations after October 1.

TAX LITIGATION

Only two cases bearing on taxation were decided by the Court of Appeals during the year 1913.

In Smith vs. Baltimore, 120 Md. 143, the court affirmed the ruling of the City Court to the effect that a private street, properly improved, could be used as a qualifying boundary for a full rate block in the Annex, and that curbs (in the ordinary sense) were not necessary if the street was provided with gutters of stone, brick or other substantial material.

The other decision (Leser et al. vs. Wagner, 120 Md. 671) affirms the validity of the Act of 1912, Chapter 688, which imposes a special paving tax on property abutting on or adjoining improved pavements, laid without special assessment against the property. The principal ground of attack against the constitutionality of the act, was the claim that it was retroactive and constituted a taking of property without due process of law, because the tax was imposed where the improved paving had long been laid and paid for and even where there had been a change of owners since then. All the objections were, however, overruled by the court.

SUGGESTED LEGISLATION

In a communication to the Board of Estimates; we recommended the total exemption of household furniture and effects on the ground that a fair administration of this tax was practically impossible, because of the expense and difficulty of appraisement and the unwillingness of the people to submit to such periodical visitation and thorough inspection of their homes as is necessary, and because the slight increase in real estate taxes caused by such exemption would not be unfairly distributed and would more than offset the expense, annoyance and inevitable inequality incident to the tax on household effects.

Other legislation recommended is included in the following list:

An amendment of Section 171 of the Charter, providing that the tax roll shall be prepared according to the locality of the property instead of alphabetically according to the names of owners. This will bring the books of the City Collector in harmony with the books of the Appeal Tax Court.

Amendments to require applications for plant exemptions and for revisions of assessments to be filed before September 1, so that they be acted upon before the basis for the next year is fixed.

An act requiring the disclosure of the true consideration in sales of real estate, either in the deed itself or in a separate paper.

An act making all city taxes due on the same date. Different dates now exist for real and personal taxes.

Legislation making the State, counties and cities preferred creditors, not only for taxes in arrears but also for taxes to become due on assessments already fixed for the year.

An amendment to simplify the assessment machinery, so that hearings may be given after tentative assessments have been made instead of before.

An act taxing business corporations on their assets as provided by House Bill No. 20 in the session of 1912. A similar bill has been passed by the House three times and came within one vote in 1912 of passage by the Senate. The bill will put incorporated mercantile and manufacturing concerns on an equality with their unincorporated competitors and greatly encourage the establishment of new enterprises and the incorporation under Maryland charters of domestic concerns which now take out charters in other States.

Respectfully submitted,

OSCAR LESER, *President*

REPORT OF THE

PRESIDENT OF THE BOARD OF SCHOOL COMMISSIONERS.

OFFICE OF THE BOARD OF SCHOOL COMMISSIONERS,
BALTIMORE, June 30, 1913.

HONORABLE JAMES H. PRESTON,
Mayor of the City of Baltimore.

SIR: The Board of School Commissioners respectfully submits the Eighty-fourth Annual Report, showing the condition of the public schools of the City of Baltimore during the scholastic year ending June 30, 1913.

CHANGE IN SCHOOL SYSTEM.

In our last annual report attention was called to important changes then under consideration relating to the methods of teaching and supervision in our school service.

Since then this department has deemed it advisable to abolish the Group Principal System and to adopt the district method of supervision with a principal or disciplinary head in charge of each school. For this purpose the Board of Superintendents was reorganized with Professor Francis A. Soper as Superintendent and six Assistant Superintendents. Professor Charles J. Koch was made First Assistant and placed in charge of the elementary schools; Dr. Charles A. A. J. Miller was elected Second Assistant and given charge of the secondary schools, both under the direction of the Superintendent.

The city was divided into four school districts and Joseph C. Hands, Robert W. Elliott, Rowland Watts and Andrew J.

Pietsch were elected Third, Fourth, Fifth and Sixth Assistants, respectively and assigned to duty as supervisors in the school districts. The new system went into effect February 1, 1912, and seems to meet with general approval. We are waiting for the new Course of Studies, which the Board of Superintendents has under consideration, to make the new system complete.

The Board desires to state that this change has been made without real hardship to any one in the service.

The displaced group principals and vice-principals were assigned to duty in other directions without reduction of salary and their claims will receive due consideration in the future when vacancies in principalships are being filled.

Increase of Teachers' Salaries.

Through the kindness of the Mayor, City Council and Board of Estimates we are enabled to pay the teachers the second installment on the increased salary maximum. It is hoped that we will be able to continue until the maximum of $800 is reached, dependent of course upon satisfactory service.

Class for Defectives.

The Superintendent's report for the school year ending June 30, 1912, shows that a large proportion of our pupils are over age for their grades. The figures are 42 per cent. for white pupils and 64 per cent. for colored children. These retarded children are divided into two unequal classes: first—the larger class composed of those who can recover much if not all the lost time, and secondly—those unfortunates who are really mentally deficient and who can never hope to attain a higher mental age than twelve years. The latter class though much smaller deserves our especial care. Proper attention and facilities for appropriate work will make these children partly self-supporting and happy. By the cooperation of the scientists of the Department of Psychiatry of the Johns Hopkins Hospital, the Board is able to give proper instruction to a small number of these unfortunate children at School No. 7. The teacher in charge has been especially trained for the work at the famous school for defectives at Vineland, N. J. The experience gained in this class will enable the Board to extend this much needed work to other parts of the city.

NIGHT SCHOOLS.

In the past the School Board has not encouraged the teaching of foreign languages in the night schools. The purpose, so far as foreigners are concerned, has been to make them acquainted with English. Owing, however, to the increased opportunities for extending the trade of our city into Spanish speaking countries, the Board has deemed it advisable to open a class in Spanish at the City College Night School. The response in enrollment was enormous, far more than could be provided for. By installing lights in more rooms provision has been made to accommodate all applicants. The teachers are all excellent Spanish students thoroughly enthusiastic in their work. The classes meet on Mondays, Tuesdays and Thursdays from 7.30 to 9.30 o'clock P. M.

NIGHT CLASSES IN SCIENCE.

For the first time in the history of our schools the chemical and physical laboratories at the City College have been opened to night school students. The instructions in the classes aim to lay the foundation of the work in which the students are engaged during the day. The classes are made up of mechanics, electricians, supervisors of factories and chemists. The enrollment exceeded our expectations and the attendance and application of the students deserve the highest commendation. While the cost of maintenance is higher in this class than in the regular night classes we have reason to believe that the return in increased efficiency will be very satisfactory. We have one report of improved methods put into operation in one of our large industrial plants as the direct result of this work. After completing a satisfactory course the student will receive a diploma.

EVENING LECTURES.

To a further extension of the work of the night schools the School Board authorized public evening lectures. During the winter thirteen lectures were given in public school buildings. The total attendance was about thirteen hundred persons. The Board hopes to extend this work as rapidly as added facilities will allow. It is especially desired to have a course of lectures on Civics in different parts of the city.

ADDITIONAL SCHOOL ACCOMMODATION.

At the beginning of the school year, September, 1912, the new school building No. 70, William street and Warren avenue, was added to our school accommodations. This is an ideal school building containing all that is necessary for the safety, health and comfort of teachers and pupils. It has twenty-four classrooms and a large assembly hall. It is equipped for all the elementary grades, together with manual training and cooking classes. It will accommodate twelve hundred pupils. The people of South Baltimore celebrated its opening with appropriate ceremonies.

An addition of ten classrooms and a large assembly hall to School No. 64, Forest Park, has made it a first-class building. Its enlargement has relieved a former crowded condition and furnished accommodations for the pupils of that vicinity for several years to come.

An addition of four classrooms and an assembly hall to School No. 13, Patterson Park avenue and McElderry street; and three rooms to School No. 63, Ninth street and Westwood avenue, have furnished much needed accommodations to those sections.

POLYTECHNIC INSTITUTE.

The handsome new buildings at North avenue and Calvert street, the future home of the Polytechnic Institute, are nearly finished. We expect to have them completed and equipped ready to occupy at the beginning of the next school year.

The new School No. 6 which is now being erected on the site of the old structure, South Ann street, is to be a sixteen-room building with all modern conveniences. It is well advanced and will soon be under roof. We hope that the pupils who are now confined to their present uncomfortable quarters in the hall over the Broadway Market will be enabled to occupy it after the next summer vacation.

New Schools No. 22, Scott and Hamburg streets, and No. 27, Fayette and Chester streets, both modern 24-classroom buildings are well under way and should be finished in time for service next September.

The drawings are being made for enlarging School No. 83, Lakewood and Philadelphia avenues. The new building is to contain 18 classrooms, in order to meet the urgent needs of that rapidly growing locality. The present structure contains 21 classrooms. It was built about ten years ago and from the beginning it has been difficult to accommodate the enrollment. There are eight portable buildings in the yard and the basement of the Enoch Pratt Library building close by is being used as an annex to the school. The present enrollment is 1,573 pupils and it will be higher. The new building is an absolute necessity and should be, if possible, completed before the schools assemble next fall.

Plans are also being prepared for a ten-room enlargement of School No. 99, North avenue and Washington street. This increase is necessary to meet the increasing school population in that vicinity. It is expected to have the building finished by September, 1913.

The Board desires to call attention to the need of a new colored school in East Baltimore, to take the place of schools

Nos. 101 and 111, for which an appropriation was made from the last school loan.

SCHOOL BUILDINGS OCCUPIED.

School houses owned by the city	108
Dwellings owned by the city	3
Portable frame buildings owned by the city	34
Buildings or parts of buildings rented by the city	18
Total number of buildings occupied	163

NEW BUILDINGS COMPLETED DURING THE SCHOLASTIC YEAR 1912-1913.

School No. 70, William street and Warren avenue; 24-classroom building.

School No. 64, Liberty road and Maine avenue, Forest Park; addition of 10 classrooms.

School No. 63, Ninth street and Westwood avenue; addition of 8 classrooms.

School No. 13, Patterson Park avenue and McElderry street; addition of 4 classrooms.

NEW BUILDINGS NOW UNDER CONSTRUCTION.

Baltimore Polytechnic Institute, North avenue and Calvert street; should be completed by September 1, 1913.

School No. 22, Hamburg and Scott streets; 24-classroom building; should be completed by September 1, 1913.

School No. 6, Ann street, near Canton avenue; 16-classroom building; should be completed by September 1, 1913.

School No. 27, Fayette and Chester streets; 24-classroom building; should be completed by September 1, 1913.

PLANS FOR NEW BUILDINGS.

School No. 83, Lakewood and Philadelphia avenues; addition of 18 classrooms.

School No. 99, North avenue and Washington street; addition of 10 classrooms.

RENTED BUILDINGS VACATED.

School No. 118, Carey and Calhoun streets.
School No. 64 Branch, Granada and Penhurst avenues—lot.

BUILDING RENTED.

School No. 27 Annex, 2214 Fairmount avenue.

PORTABLE SCHOOL BUILDINGS.

Two transferred from School No. 63 to School No. 77, Washington street, near Fayette street.

Two transferred from the Watson lot, Granada and Penhurst avenues, to School No. 64 Branch, Garrison and Penhurst avenues.

One transferred from School No. 118 to School No. 83, Lakewood and Philadelphia avenues.

STATISTICS FOR THE SCHOLASTIC YEAR ENDING JUNE 30, 1913.

DAY SCHOOLS.

SCHOLASTIC YEAR 1912-13.	Normal.	Secondary.	Elementary.	All Day Schools.
Total number of different pupils enrolled	215	5,282	68,323	73,820
Average net roll or register	180	4,616	63,036	67,832
Average number belonging	171	4,420	59,159	63,750
Average attendance	163	4,135	52,965	57,263

NIGHT SCHOOLS.

Total enrollment for scholastic year 1912-13	8,788
Average net roll or register	4,310
Average attendance	3,188
Number belonging at end of term	3,406

Summer Vacation Schools.

Total enrollment for scholastic year (summer of 1913)	1,329
Average net roll or register	1,076
Average attendance	924
Number belonging at end of term	962

Number of normal schools	2	
Number of secondary schools	5	
Number of elementary schools	104

Unexpended December 31, 1912, paid into General Fund, City Treasury	$38,109 14	
Expended to June 30, 1913	1,876,840 06	
		1.914.949 20
Unexpended, carried forward to 1913-14		$785,003 42

Respectfully submitted,

THOMAS McCOSKER,
President of the Board of School Commissioners.

In Memoriam.

The following named teachers died during the scholastic year 1912-1913:

September 25—Walter H. Harris.

September 25—Bertha K. Johnson.

October 9—Mamie B. Holmes.

November 13—Mayme O. Taylor.

December 11—Annie H. Graham.

December 11—May G. Hennessee.

December 23—John S. Black.

January 22—S. Elizabeth Hopkins.

February 26—Laura V. DeValin.

February 26—Mary E. Frame.

March 12—Sue Browning.

March 26—Annie E. McBee.

April 9—William Cary Robinson.

May 14—Matilda Gebhardt.

May 28—Alice L. Frey.

SECRETARY'S STATEMENT

REPORT OF THE SUPERINTENDENT.

BALTIMORE, June 30, 1913.

The Board of School Commissioners,
Baltimore, Md.

GENTLEMEN: In accordance with Article VI, section 4, of the rules of the Board of School Commissioners, I have the honor to submit a report for the scholastic year ending June 30, 1913.

If I were to express the condition of the schools in a single sentence, I could use no more appropriate expression than this: "Steady progress has been made."

One of the criteria of a good system of schools is its popularity. The tables appended will show that there has been a substantial increase in the enrollment of the pupils during the last scholastic year.

There is always danger in relying solely on figures. The attendance in a school or a school system may decrease and still the method of instruction and the pedagogical results become decidedly superior. The movement of population is a potent factor in affecting the size of school attendance. Possibly no other cause has had a greater influence on enrollment. There is a steady flow of population to the suburban sections adjacent to our city. As the sections beyond the confines of Baltimore become more populated, better equipped county schools are erected, and many pupils who lived in the city limits and whose parents find occupation there leave the city schools and attend these new and attractive county institutions. The efflux school population, however, has been exceeded by the influx population from the counties and other states to the extent of several hundred pupils. The excess of influx over efflux together with the natural increase of school population has brought about a total increase of 3,251 in this year's net enrollment over that of last year.

The movement of city population from one section to another affects our system in another way. Widening of streets, opening of new highways through built-up sections and consequent encroachments of business and manufacturing establishments upon residential sections cause many families to move into other parts of the city. Thus the older school buildings are depleted and schools in the newer sections are overcrowded. If the entire seating capacity of all our schools could be made use of, it would be found that our housing facilities would not be as inadequate as the number of portable schools indicates. Since old schoolhouses cannot be moved, and since there seem to be insurmountable difficulties in the way of compelling children to attend schools miles away from their homes, it will be necessary to keep on erecting new buildings in the populous sections, and some years must elapse before the city can return to the custom of erecting but one schoolhouse a year.

In the last annual report, mention was made of the fact that your Board had increased the number of superintendents by three and had abolished the system of group principals in the elementary schools. Certain advantages that were brought about by these changes were also set forth. Another year's experience has demonstrated that, as the superintendents become more and more acquainted with the teachers, the pupils, and the school patrons, together with the needs of their particular districts, and as the heads of elementary schools gain power in skillful and helpful supervision, the whole school system will become more effective and turn out pupils better equipped for the active duties of life.

The all important question of strengthening the curriculum has engrossed the attention of the Board of Superintendents, and progress has been made in formulating tentative outlines in certain subjects, and these outlines are being tried out in the classrooms.

Household arts have been installed at the Eastern and Western High Schools. Judging from the eagerness with which the girls have availed themselves of the opportunities offered in these new branches, the verdict must be that a long felt want has been filled.

Our statistician has again compiled various tables showing promotions from grade to grade, ages of pupils, length of time for completion of work, and other matters of interest. All these statistical tables are of sufficient importance and value to merit a very close study by the Board of Superintendents and the Board of School Commissioners.

The wider use of school buildings has been a subject of much agitation. There is no doubt that the amount of money invested in school buildings, especially in the most modern plants, does not bring sufficient return from the point of view of investment. The statement that large, commodious school halls and gymnasiums should be occupied more than five or six hours a day is heard over and over again. The fact is, however, that all our modern schoolhouses are already being used by such agencies as the Playground Association, the Public Athletic League, and many improvement and home and school associations. In some instances every night in the week is engaged for meetings. As far as the high schools are concerned they are often in use as long after the day's session as during the day's session. A still larger development of social and civic activities in the schools is recommended. Responsible leaders, however, must be had in the various neighborhoods. These leaders with the aid of superintendents and principals will carry out carefully prepared programs that have the sanction of the Board of Education. It must not be forgotten that the development of schools as social centers will add to the general expense. The pay of janitors and firemen, the cost of fuel and light, the wear and tear on furniture and buildings are some items that will cause increase. Most likely, too, if the social center idea is systematically developed, expert specialists in the field of work will have to be employed and salaries for such men and women must be provided.

For years educators have insisted on having manual training in the schools and perhaps today there is not a public school system that does not train pupils in handwork. It cannot be denied that boys and girls have derived great benefit from the instruction in the various branches of manual training work. Still public opinion seems to indicate that even now the schools are not preparing their pupils satisfactorily for life's work. It is argued that much of school work does not function for life, that is, does not make the child a better wage earner. The remedy lies in part, at least, in vocational training. Much more is demanded than is done in manual training centers, in vocational night school classes, in the household arts and commercial departments of the high schools. The solution of this problem will require serious thought and study and the helpful cooperation of public spirited citizens.

Closely connected with vocational training is vocational guidance. Live teachers have always been interested in guiding such pupils as were obliged to leave school early into industrial pursuits in which their capabilities might be developed profitably. It can hardly be said, however, that any systematized method for finding safe and profitable employment for pupils has been developed in our schools. Vocational guidance is being studied and worked out in various cities, emphasizing the fact that the educators' task does not end with the classroom, but follows the pupil so as to secure a rational adjustment to his work. The city of Edinburgh has worked out the problem very satisfactorily. Boston, New York, Chicago, Cincinnati, Cleveland, and other cities are actively engaged in perfecting a system of guiding their pupils vocationally. This new field of educational endeavor will challenge attention in our system.

The greatest and most urgent problem that confronts school administrators is the supply of teachers. Without well equipped and thoroughly trained teachers, it is impossible to maintain high standards and progressive efficiency of schools. The many avenues of professional employment that have opened up to women have not only caused young teachers to leave the work, but have decreased the number of students in our training schools. It has been necessary to make use of so-called emergency substitutes in filling vacancies; many of these are not trained in scientific methods and their work must necessarily be somewhat crude. I suggest two remedies to relieve this situation. The one is to raise the minimum and maximum salary of elementary teachers whereby an increased number of capable men and women shall be attracted to the profession. The second is to change the rules in such way that former teachers of ability and teachers from other systems will have less difficulty in entering our system. Abler emergency substitutes could doubtless be had for more liberal compensation.

The benefits of the public school in the course of the year have been extended to crippled children other than those at the hospital schools. Much brightness has been added to the lives of these unfortunate children by having them in school. It is hoped the work will be further extended.

Some provision has been made for the study and training of subnormal children. So long as our eleemosynary institutions shall be unable fully to care for these children, the public school system must do so. Separating these children and giving them instruction suited to their limited powers not only helps them, but also helps the normal children by affording them a greater share of the time of the teacher who has been relieved of the subnormal element.

My colleagues, the supervisors of the special departments, principals and teachers of elementary and secondary schools have worked zealously to perfect the system. The special reports contain items of interest, they indicate the progress that has been made, and they forecast plans for greater achievements.

Thanking the Board for helpful sympathy and cooperation in the cause of public education, and expressing appreciation of the aid extended by colleagues and teachers, I am,

Very respectfully yours,

FRANCIS A. SOPER,
Superintendent.

REPORT OF CHARLES A. A. J. MILLER.

Baltimore, June 30, 1913.

Mr. Francis A. Soper,
Superintendent of Public Instruction.

Sir: In the scholastic year 1912-1913 the secondary and training schools achieved good results. The one great problem—attaining the greatest good for the greatest number—kept principals and teachers busy and occupied both in and after school hours. I feel free to say that in the year just passed more students pursued their studies with credit to themselves and to their schools than in any previous year. In the female high schools hundreds of girls enthusiastically took up the household arts course. From the luncheons they served at various times one could judge that the instruction given in the course was successful.

Most of the aims outlined in last year's report have been reached; several, however, are still unaccomplished.

A salary scale for the members of the faculties of the Colored High and Training Schools has not as yet been established. I cannot refrain from stating that the salaries paid some of the teachers in the colored secondary schools are lower than those paid to teachers in the elementary schools. This condition has a very depressing and discouraging effect upon these secondary school teachers. I respectfully urge you to use your influence to have a salary scale established for these colored teachers before another year will have passed by.

The Teachers' Training School is still housed in its cramped quarters in School No. 70. Lack of a permanent, well-equipped home has been an obstacle to the growth of this school for the training of teachers. A stately edifice in itself does not make a populous school, but inadequate accommodations surely keep students from enrolling in a school. Since our white elementary schools depend for their teacher supply almost entirely upon the Teachers' Training School, every effort should be made to guard against losing even one student on account of insufficient room. In this connection I should like to advise that it would be well to advertise the school by distributing among the seniors of our secondary schools copies of a pamphlet giving the aims of our city training school, setting forth its course of study, and calling attention to the opportunities for employment within the reach of its successful graduates.

For several years criticisms have been heard in regard to the functions of secondary or high schools and the courses of study pursued in them. Most people admit "That the high school is the school of the people at large, and that it must serve the interests of the majority who do not go to college as well as the interests of the minority who do go. The greater numbers of those who go no further certainly require that their interests shall be guarded. On the other hand, the greater influence in society and the state of those who go on makes it important that every opportunity and every stimulus should be given them to reach their highest possible attainments. In most cases there is no necessity that the interests of either class should be neglected, although it may be necessary at times to use good judgment in striking a balance between them. The large schools can provide opportunities for all."

Our high schools do justice to both classes of students, those that go to college and those that do not. In accordance with the recommendations contained in the famous "Report of the Committee of Ten" made in 1893, and the resolution of the "Committee of Thirteen" passed in 1899, four of our high schools recognize the principle of election of courses. However, never is their unlimited election allowed; certain constants are always required.

Much time has been devoted to the study of what constitutes a proper high school curriculum and of how much choice should be allowed. In the coming year recommendation as to modifications of the courses now offered will be made. The adoption of these recommendations will insure greater school efficiency and will keep students from leaving before completing a chosen course.

The reports of the secondary school and training school principals, together with the usual statistical items, are herewith presented for your consideration.

Very respectfully yours,

CHARLES A. A. J. MILLER,
Second Assistant Superintendent.

REPORT OF CHARLES J. KOCH.

BALTIMORE, June 30, 1913.

MR. FRANCIS A. SOPER,
Superintendent of Public Instruction.

DEAR SIR: I have the honor to transmit the reports of the assistant superintendents on the condition of the elementary schools and to add the following personal statements:

The exhaustive report of the Statistician presents the familiar problems of grading, retardation, and repeating in striking form. These problems cause us the greatest concern; but we are encouraged to note from the report of the Statistician that there is a steady tendency toward their ultimate solution. This solution could be expedited by the establishment of smaller classes and a more suitable course of study. With the physical conditions now prevailing in most sections of Baltimore, we shall not be able to organize many small classes. We can, however, effect the necessary changes in the course of study; and I would recommend that the whole course be revised as to content and distribution, and that three general divisions be adopted—academic, industrial, and commercial. We have in Baltimore abundant opportunity for wise experimentation along these lines, and all that we need is the necessary legislation by the Board of School Commissioners.

DEPARTMENT OF SUPERVISION.

The plan put into operation last year appears to be working fairly well. The only criticism to which it seems exposed is that of the exceedingly large district which each assistant superintendent has to cover. When the heads of schools are made principals with larger powers, the work of the assistant superintendents will be materially lightened. I would recommend that each head of a building be made principal and that he be given ample powers of supervision and control. The assistant superintendents report that the teachers are industrious and cooperative in their work.

NIGHT SCHOOLS.

Tables 6 and 7 contain statistical information concerning the night schools. They are growing in popularity, and the work is being gradually systematized. The science classes at the Baltimore City College Night School, recommended in my last report, have been opened. The work done in these classes must be seen to be appreciated. No figures show the high class of students attending these courses. Attendance at the evening lectures was about the same as the year before. To extend this work a larger appropriation will be needed; and I would recommend that the sum of $500 be set aside for this work in 1913. The four classes in Spanish at the Baltimore City College have been very successful, but it is my opinion that there will not be a steady demand for a larger number of Spanish classes.

SPECIAL CLASSES.

The ungraded classes were in operation as last year. In my opinion these classes should be divided into ungraded classes and disciplinary classes, and we shall try to devise a scheme looking to this end. The classes for crippled children at Kernan's Hospital School and at the Children's Hospital School have held regular sessions and are greatly appreciated at those institutions. The additional class for crippled children authorized by the School Board and established at School No. 20 is also meeting a great need. Doubtless the next year will see this work greatly extended in other sections of the city. The special class for mentally defective children at School No. 7 is being conducted in conjunction with the Department of Psychiatry of the Johns Hopkins Hospital. Its work is best explained in the accompanying report of the teacher, Miss M. Belle Myers.

REPORT OF MISS M. BELLE MYERS ON THE OBSERVATION CLASS OF MENTALLY DEFECTIVE PUPILS, JUNE, 1913.

Total number enrolled	16
Withdrawn (1 to Owings Mills, 1 to country to live)	2
Number now on roll	14
Natural ages of children	8½-15 years.
Mental ages of children	5 - 9 years.

It may help to give an idea of the status of the class to make some statements regarding prominent characteristics in the pupils that retard progress and interfere with the general management of the classroom:

Of truants there have been	9
Noisy or excitable	5
Moody	5
Stubborn	6
Lazy	5
Cranky or quarrelsome	7
Destructive	5
Lack of control	9
Untruthful	7
Will steal	4

The obedient and easily managed number *four*. On the intellectual side, the powers of observation, attention, concentration, and memory are noticeably poor, though improvement has been noted. The entire effort has been towards the formation of habits rather than towards specific results, although the latter, of course, involve the former; and just here it is that every child in the class has made some improvement along some line or lines, with the exception of the one, who entered the last week of May. He has not yet caught the class spirit, having been absent several times. In some instances the improvement has been not only evolution but revolution. The improvement is gratifying in cases where the attention at first could not be held at all and now can be sustained long enough to produce a result and even carried over into things that are not of themselves attractive. One of the greatest successes attained in our class is found in the attitude towards work to be done and in the belief in ability to accomplish, some of the children apparently having for the first time found themselves. A striking characteristic of feeble-mindedness is to give up immediately when a difficulty is met. We have had many difficulties presented and have overcome many, but there are yet many more to be met.

Along the industrial and manual line great strides have been made. From never having used a tool up to the use and control of several in the production of useful articles, tells of the interest and success along this line; and too, the several industrial occupations, gardening, sweeping, dusting, setting the table, washing dishes, laundering tea towels, etc., that the children have undertaken, tend toward progress. It is in the manual and industrial work that great effort has been made to lengthen the span of attention, since the power of attending is the real measure of the child's mental control. Besides, by increasing and strengthening the child's constructive ability by the concrete manual work, the powers of attention and concentration can, to some extent, be carried over into the academic work. The motor memory, being the strongest phase of memory with the feeble-minded, has been called into service whenever practicable.

In academic work, the following shows the status of the children upon entrance and the improvement attained:

READING.

Three could not read (one can now read simple sentences).

Two could read very little, and with uncertainty and many mistakes (one has improved considerably).

Two made up reading from pictures, here and there hitting a word (can now read eighteen pages of primer).

One read first reader poorly (slight improvement).

Two read first reader fairly well (one has now undertaken second reader).

Three read third reader poorly (slight improvement in both).

Two read fourth reader fairly (improvement noted).

SPELLING.

Ten have improved; of the other four, two are trying to master the names of letters and two seem to have no memory at all for words or letters.

ORAL REPRODUCTION.

At first, several were afraid to try; now four have improved greatly, seven slightly, and four do little or nothing.

WRITTEN REPRODUCTION.

Here seven have advanced, and others cannot spell sufficiently to express their ideas.

WRITING.

Improvement noted in penmanship and in the general appearance of all written work, the placing upon paper, etc.

NUMBER.

Two had no conception of number beyond 3 (one can recognize and picture 4 and sometimes 5, the other has mastered 6).

Four could not add or subtract (two have come to add and subtract 1 and 2 from numbers less than 10).

One could add and subtract the smallest numbers (very little if any improvement).

One could add and subtract, also multiply small numbers (can now use slightly larger numbers).

Two could add, subtract, and multiply numbers to 20 (now have improved in addition and subtraction, but make many mistakes in multiplication and often forget completely what the terms subtract and multiply mean).

Four could use addition, subtraction, multiplication, and short division. Have tried long division, but not with much success. Two, probably three, appear to be reaching their limit along mathematical line.

To sum up briefly, improvement has been noted as follows:

	Marked.	Slight.	None.
Morals: Habits, characteristics, discipline......	8	5	1
Intellectual: Observation, attention, concentration, memory	10	3	1
Industrial and manual.........................	13	..	1
Academic	4	7	3

Increased care of materials and a better attitude towards school property have developed. The children have grown very proud and generally careful of "our things."

Respectfully submitted,

M. BELLE MYERS.

IMPROVEMENT OF TEACHERS IN THE SERVICE.

The teachers are showing the same steady desire for self improvement noted in my last report. All normal extension classes are well attended and an increasing number of teachers is taking special courses at the universities. I think experience shows that the desire for self improvement is not directly proportionate to extra pecuniary compensation.

SALARIES OF TEACHERS.

The superintendents of elementary schools have called your attention so frequently and insistently to the need of higher salaries in all branches of the elementary schools, and the present shortage in number of trained teachers in charge of classes is so harmful to the system, that I again urge you to advocate higher salaries for elementary teachers.

SCHOOL ACCOUNTING.

The work of the Bureau of Statistics and Research is so well represented in this report that I need simply suggest the need for more clerks in that department. The work of the Statistician is so valuable that he should be relieved of mere clerical duties as far as possible.

WIDER USE OF THE SCHOOL PLANT.

Baltimore will have to follow the lead of other cities in the wider use of school plants. A number of our new elementary buildings are especially adapted to this work; and I sincerely hope that plans will be inaugurated to make them of great service to the neighborhoods in which they stand.

Respectfully submitted,

CHARLES J. KOCH,
First Assistant Superintendent.

REPORT OF ROBERT W. ELLIOTT.

BALTIMORE, June 30, 1913.

MR. CHARLES J. KOCH,
First Assistant Superintendent.

DEAR SIR: I submit the following brief report of the work of District No. 1 of the elementary schools for the year ending June 30, 1913.

During the past ten months it has been the aim and purpose of the teachers and supervisor alike of the district to study carefully local as well as general conditions in order that the pupils attending our schools may be trained more efficiently as they pass from grade to grade, and that they may be promoted from this department with a more substantial equipment for secondary school work or for whatever field they may decide to enter. This has meant a critical study of the most effective plans and devices for successful teaching, and of drills for clinching that which has been presented. Unmistakable evidences of progress have been noted already. These encourage us to believe that the coming year will be even more fruitful of results. This, also, is the special work that has been outlined for the months that are before us.

The matter of providing convenient and comfortable accommodation for the pupils of our locality continues to be a very grave problem. Relief has been given in some sections, but in others conditions are growing worse steadily. School No. 65 (Calverton) is in the midst of a rapidly increasing population and we cannot hope properly to meet the demands of the occasion until a large new building replaces the one now in use.

The pupils of School No. 91 were transferred to classrooms in the neighborhood and this building was made a school for colored children. However, only temporary relief in the colored situation has followed, for crowded conditions still prevail. Besides, we continue to use the unsuitable buildings to which attention was called one year ago. Another large school is an urgent necessity.

A spirit of earnest cooperation is present everywhere. The principals are rapidly growing accustomed to their new duties introduced by the reorganization of the plan for supervision, and a faithful band of assistants is supporting them in every school. The pupils are attentive and industrious, and are making encouraging progress. The enrollment in some sections has diminished, but the total shows a gratifying increase.

Very respectfully,

R. W. ELLIOTT,
Assistant Superintendent, District No. 1.

REPORT OF ROWLAND WATTS.

BALTIMORE, June 30, 1913.

MR. CHARLES J. KOCH,
First Assistant Superintendent.

DEAR SIR: In my report of June 30, 1912, I referred to certain existing conditions and made suggestions as to the future development of the work. The crowded classrooms in certain schools was a matter of serious concern and has not as yet been entirely remedied, although the ten-room addition to Columbus School (No. 99) will furnish relief at that point. A report calling attention to other schools where the need of more rooms seems imperative is on file.

It is gratifying to be able to report that steps are being taken to grade the yards and playgrounds of Waverly (No. 51) and Alcott (No. 59) Schools, and I hope these improvements, as well as others of a similar character, may be completed very promptly.

The logical operation of the law raising the age of compulsory school attendance has been to increase the numbers in the fourth and fifth grades, making a larger number of teachers necessary. The eligible list of teachers has been exhausted and it is apparent that next year many classes will be in charge of emergency substitutes, many of them untrained and inexperienced. The fact that many pupils are forced back from work and others unwillingly remain in school, contrary to the desires of their parents, makes the task of the teacher the more onerous and success much more difficult to attain. The large classes and hard discipline have already made serious inroads upon the health of our teachers, many of them being on sick leave more or less extended. Perhaps a more serious aspect of the situation is the reflex influence of the teacher's ill health upon the pupils.

The call of other genteel forms of employment for young women who graduate from our high schools is becoming so immediate and so insistent that a steadily decreasing number will subject themselves to the rigorous training and long apprenticeship to which the teacher must submit before receiving a living compensation.

The crowded condition of our schools has made it practically impossible to form classes for children requiring special attention. Many children who could be educated are thus deprived of their opportunity and ultimately dropped out of school to become more or less a charge upon the community.

There are in our schools quite a number of children who are not educable but who become a burden and a serious menace to the normal children with whom they are compelled to associate. These unfortunate children should be provided for in properly equipped institutions where love and tenderness may find a way to help them without injury to their fellows.

I feel it my duty again to call attention to the very unsatisfactory manner in which we are compelled to handle the unruly children and again to suggest that plans be inaugurated for the more adequate care of these pupils.

The principals have given increased attention to supervision of classroom work and are manifesting a very helpful spirit toward the teachers. The schools are developing a commendable rivalry in many lines of endeavor.

The assistants to the principals are proving very helpful by taking the brighter pupils of certain grades in the regular studies while the classroom teacher devotes her time to special work with the slower pupils. The highest success cannot be attained by this plan where the overcrowded conditions prevent the separating of pupils. In some cases children born short in certain faculties have been allowed to advance with their classes in most subjects while they receive special help upon their weak points. While some of these may not complete the course and go to the high school, they will at least have gotten the greatest benefit from the time they have been in school and have not suffered the deadening influence of repeating, ad nauseam, things already known. In some schools I have promoted upon trial a number of pupils not fully recommended by their teachers. The results have been so encouraging that practically all of my schools have adopted the plan this June. As the parents and pupils are acquainted with the conditions of trial, the pupils may be induced to make good use of their summer vacation, and there is every reason to believe that at least one thousand pupils in District No. 2 will thus save a half year.

The number of applications for admission to the preparatory classes has not been so great as we had expected. Our patrons do not seem to desire Latin for children below the high school age. On the other hand, the possible saving of a year for those entering high school has appealed to many. The preparatory classes have, therefore, not been unprofitable.

We regret that we have not been able to introduce the division of courses into vocational, commercial, and academic, with ninth grades in the larger schools.

The same faithful, efficient service upon the part of teachers in my district, to which I made special reference in my previous report, has continued. The hard and at times discouraging conditions under which many of them work makes their cheerful compliance with every suggestion for the advancement of their pupils all the more noteworthy.

There has been a marked awakening of interest in the schools of District No. 2 upon the part of the patrons. Several new Home-School Associations have been formed and some of the existing organizations have renewed their interests. It is very gratifying to have the parents visiting the schools and cooperating with the teachers and sustaining the various activities of the school community. Several of the schools in the district are fast becoming neighborhood centers of civic as well as educational improvement.

School gardens, flower boxes, and other methods of making schools more attractive have received greater attention this year. It is a gratifying fact that District No. 2 has won many of the prizes offered for flowers in school yards and windows.

It is especially gratifying to note a marked increase in the pride the children are taking in the care of buildings and furniture. It is hoped that this improvement will continue until there shall be no more disfigured furniture and buildings in the city.

Respectfully submitted,

ROWLAND WATTS,
Assistant Superintendent, District No. 2.

REPORT OF ANDREW J. PIETSCH.

BALTIMORE, June 30, 1913.

MR. CHARLES J. KOCH,
First Assistant Superintendent.

DEAR SIR: In compliance with the rules of the Board of Education, I respectfully make the following report on District No. 3.

Upon a more intimate acquaintance with the problems in this district, I must reiterate my remarks about the accommodations. In all the schools in my charge there are but two vacant rooms, and in some of the buildings there are more classes than rooms, necessitating the unfortunate half-time classes. In two schools the children are housed in very uncomfortable quarters. I am glad to report, however, that there is ample relief in sight, through the erection of two large new schoolhouses for their accommodation. These we hope to occupy at the opening of the next year. Another building, the Colonel Tench Tilghman School, has had an addition of four rooms and an assembly hall, which will relieve its crowded condition for some time. While all the schools have been crowded, this year their accommodations were taxed beyond their limits by the enforcement of the new regulations of the Child Labor Law, which sent back to the schools all not of legal work age.

In such crowded rooms, in old buildings, with much wood and glass in evidence, it is difficult to maintain either proper ventilation or cleanliness. These conditions add much to the teachers' problems in the propagation of actual hygiene.

In spite of all these drawbacks, and in spite of the difficulties resulting from the new methods of distributing books and stationery, and indeed of many other hindrances (such as contagious disease, improper environment, and irregular attendance), and in spite of many changes in the teaching staff, the general advance in scholarship, in general interest in the schools, in harmony, in loyalty and zeal has been so marked among the teachers that it calls for especial commendation. The teachers are pleased with the new course of study so far as it has been furnished them and they are eagerly expecting the remainder.

The progress in the classes is as marked as it is among the teachers. By the restoration of thoroughness and accuracy much progress has been made and in a short time the benefit of this method will be evident. Children are taught according to their ability and not according to their grading. In this way true progress is made.

During the year a class of subnormal children was established at School No. 7 under Miss Belle Myers. The Psychiatric Department of the Johns Hopkins Hospital assisted very much in classifying and testing them. In September we hope to raise the standard of mentality to such a point that true progress will be evident.

In the coming year I can only hope that prevocational work may be introduced into the schools in order to provide for the hypermotor child. Were these followed up with continuation schools, the "wider use of the schools" movement would have reached its limit from the educational side, except for lectures.

With the hope that these two or three items may be made realities within the coming year, this is

Respectfully submitted,

ANDREW J. PIETSCH,
Assistant Superintendent, District No. 3.

REPORT OF JOSEPH C. HANDS.

BALTIMORE, June 30, 1913.

MR. CHARLES J. KOCH,
First Assistant Superintendent.

DEAR SIR: During the past scholastic year I have had the opportunity to become better acquainted with conditions in my district. Among the principals and teachers there is a spirit of cooperation and optimism that is highly pleasing to me. It is also plainly evident that the teachers' relations to their pupils are undergoing a complete change. They are realizing that the welfare of the school does not come largely from influences or reforms from without, but from powers that reside within the human breast. As a result of this kindly attitude, there are very few real differences between the teachers and patrons. This does not necessarily mean that the teachers are becoming weakly indulgent and seeking to win their pupils without pedagogical skill and tact.

Neighborhood conditions and problems peculiar to individual schools are being studied and solved without feeling that rules and uniformity in the course of study are being sacrificed. It has been found necessary to allow considerable discretion in carrying out the curriculum on account of the great differences in the school population of my district. As a result of this special study, there is a great increase in interest and average attendance on the part of the pupils.

One of the most praiseworthy illustrations of the study of the health of the pupils is the movement which has led to the establishment of the open-air class at School No. 76. "The interest of the community in its own welfare was the strongest factor in the movement," was the comment of the president of the Maryland Society for the Prevention of Tuberculosis when they set aside five hundred dollars to assist in the work. This interest was developed through the Parents' Club connected with the school, through petitions signed by more than fifteen hundred residents, and through the unselfish and faithful devotion of the principal and teachers of the school. With a part of the money donated, blankets were purchased and made into twenty-five Eskimo suits by the teachers and mothers during the winter evenings. On account of the delay in securing the land in the rear of the school building, it has been decided to put the class in the school yard, using a tent as shelter in inclement weather. Valuable assistance was rendered by the school physician, who also secured the promise of a special nurse from the Health Department. The interest in the movement is still unabated, and the successful opening of the class in the fall is eagerly anticipated.

The strict enforcement of the Compulsory Education Law has forced into our schools many over-age boys and girls who do not wish to take the regular work of the grades. In many of the schools, these pupils present very difficult problems; and the ingenuity and patience of teachers and principals are sorely taxed. Some special method whereby these pupils might be collected together in classes should be devised so that they may be enabled to pass the educational test of the Labor Bureau without unnecessary delay.

There is an increasing tendency on the part of the new teachers to seek assignment in schools near their homes. The low salaries, the high cost of living, and the ever increasing demands upon the teachers for self improvement render it necessary for many of them to save car fare. Since there are but few teachers who live in my district, a difficult problem is presented as to the method whereby it may be possible to do justice to the pupils. The same difficulty presents itself in the case of the emergency substitutes who must be called upon when eligible teachers are not available. The whole problem is one of the most serious with which I have to deal and should be given very careful consideration without delay.

The new course of study in arithmetic has been carefully tested, and there is abundant evidence that the emphasis which is placed upon the fundamental processes is highly satisfactory to teachers and patrons. I find that the best results are being obtained where oral arithmetic is being systematically taught from rationally prepared problems in connection with the daily written work of each grade. The teaching of the simple process of analysis which runs through the whole science of arithmetic is leading to intellectual power in the pupils.

Principals are getting more in touch with conditions in their respective schools since it has been possible to give many of them assistance for at least a part of the day. Teachers seem to welcome the kindly suggestions that are being made from time to time, and the general outlook for constructive work is decidedly encouraging.

Respectfully submitted,

Joseph C. Hands,
Assistant Superintendent, District No. 4.

REPORT OF ATTENDANCE DEPARTMENT.

Baltimore, June 30, 1913.

Mr. Francis A. Soper,
Superintendent of Public Instruction.

Dear Sir: Enforcing the requirements of the new Compulsory Education Law and the new Child Labor Law increased the difficulties of the Attendance Department in the scholastic year 1912-1913. Tact and firmness were required to overcome the opposition to these new laws.

On December 1, 1912, when the new Child Labor Law went into effect, the permits of 1,018 children were revoked. It fell to the lot of the Attendance Department to see that these boys and girls were reentered in school. This was not an easy task. Many visits had to be made before the final report could be drawn up as to the results of this particular piece of work. Most of the children returned to school. In a few cases, to bring about this return without inflicting too great loss upon the family income, the Federated Charities were asked to provide school pensions. The following table will show the results of the investigation:

Report on Permits Revoked January 1, 1913.

Number of children home (legally)	11
Number of children withdrawn by doctor's certificate	11
Number of children at work with permits	17
Number of children moved out of city	27
Number of children committed to institutions	2
Number of children died	1
Number of children not located	23
Number of children living in county	13
Number of children returned to school	913
Total number of children reported to Attendance Department	1,018

The work of the attendance officers is concentrated largely upon the truants, suspected truants, and irregular attendants of the public schools. Annually parochial and private schools are notified by circular that truancy and irregular attendance cases reported by mail will be investigated by the Attendance Department. Very few of these schools take advantage of this offer. When the officers visit the schools, cases are reported. Unfortunately, however, not many visits can be made to these private schools on account of lack of time and the limited number of officers.

The percentage of attendance for the year was the same as that of last year, 90 per cent. There is a steady diminution of persistent truancy among the white children. This is due to the vigilance of the attendance officers and to the corrective influence of the Parental School. It also acts as a deterrent to many pupils tempted to truancy, since they have learned to know that persistent truancy may bring about a temporary loss of liberty. The establishment of a permanent home for the Parental School marks a new epoch in its history. Superintendent Read and his assistants hope to enlarge the sphere of usefulness of the institution.

At my request, Miss Rosabel E. Hall, Chief Attendance Officer, has prepared the following statement on certain phases of an attendance officer's work:

"Every attendance officer endeavors to learn the true cause of a reported case of truancy or absence, and to work on that cause. Everything that can be done to promote regular school attendance and the moral, mental, and physical uplift of the children with whom they come in contact becomes the duty of an attendance officer. When she encounters difficulties in the homes, she meets them with sympathetic intelligence. When necessary, she brings to a home the tubercular or visiting nurse, the friendly visitor of the Charity Organization Society, or any other uplifting agency that can help the home and thus the particular absent or truant child. When an attendance officer discovers that a child is sick and is not receiving proper medical attention, this condition is referred to the Visiting Nurses' Association. The nurse visits the home and makes every arrangement for the proper and continued care of the child. Thus the child is benefited in two ways: from the standpoint of health and that of more regular attendance.

"Many children are absent from school on account of lack of clothes or shoes. These poverty cases are referred to the Federated Charities, which investigate and provide what is necessary. By this means children whose absence would be protracted or who would not be sent to school at all, are provided for and the term of absence is shortened.

"If it is found that children are in homes where the surroundings are immoral or where they have improper care, the help of the child-welfare societies is invoked.

"Parents of feeble-minded children are urged to send them to the special ungraded class for sub-normals or to the Asylum at Owings Mills."

From this account it will be seen that attendance officers are more than mere house-callers; that, in fact, they are earnest social workers. Much more could be accomplished by them, if their respective territories were not so large. I therefore once more plead for more attendance officers. To this request I must add another, that a parental school for colored children be established at an early date.

Very respectfully,

CHARLES A. A. J. MILLER,
Second Assistant Superintendent,
In Charge of Attendance Department.

REPORT OF THE DIRECTOR OF THE TRAINING OF TEACHERS.

BALTIMORE, June 30, 1913.

MR. FRANCIS A. SOPER,
Superintendent of Public Instruction.

DEAR SIR: The work of the Teachers' Training School and of the Colored Training School during the past year has shown some advance over that of the previous year. The defects of equipment are still serious, and many important divisions are working under limitations which are frequently wasteful. I wish to recommend that a special inquiry be made into the needs of this department of the service with the intention of outlining a general plan, part of which can be carried into effect at once and serve as a basis for further advances to be brought about as rapidly as possible.

I wish again to urge the following recommendations:

(1) A well equipped children's school should be furnished the Teachers' Training School in which a part of the observation, participation and practice work can be done.

(2) Adequate equipment in furniture, library books, laboratory material, gymnasium, etc., should be provided for each training school.

(3) The number of white teachers of practice should be increased so as to give each teacher charge of but one room. This would make it possible for each student to have taught in two grades instead of one, as at present is the case.

(4) The organization of the system in such a way as to make possible an entering class in the Teachers' Training School each February.

(5) The provision of a small annual appropriation for books, which can be expended as new material appears without the machinery of requisition.

(6) The publication of a hand-book giving in considerable detail information concerning the course of study and organization of the Training Schools.

Respectfully submitted,

FRANK A. MANNY,
Director of the Training of Teachers.

REPORT OF THE PRINCIPAL OF THE BALTIMORE CITY COLLEGE.

BALTIMORE, June 30, 1913.

MR. FRANCIS A. SOPER,
Superintendent of Public Instruction.

DEAR SIR: The established curriculum of the Baltimore City College was not varied during the year from September, 1912, to June, 1913, and the results of its administration were in the main successful. One hundred and sixty students were graduates at the commencement held Monday, June 16, 1913. This is an increase of 22 over the previous year and is probably more than will be graduated for several succeeding years. Up to the conclusion of the current year, the graduating requirement has been 150 credits, while hereafter graduates will have to make 170 credits, an average of about 43 credits to a year, if the course extends to four years, and probably more than any graduate can successfully accomplish in three years. This exclusion of three-year graduates will materially diminish their number. Quite a number of this year's graduates have secured certificates for colleges and universities—yet more for professional schools, such as medicine, law, dentistry, etc. The requirements for entry into these latter schools have been more definitely fixed than formerly, and very materially increased. There is now a regular Examining Board and a regular official whose duty it is to pass upon candidates for admission to Maryland professional schools. The Baltimore City College is among the secondary schools whose certification, under decision of the Examining Board, admits to these colleges without examination.

The Commercial Department has furnished its usual quota of young men to take part in business pursuits. The work of this department, I think, can be improved by the following changes: omit algebra in the first year and give a more extended training in commercial arithmetic. Let the student choose between German and Spanish, as a foreign language. Make a course covering two years for which certificates can be given, said course to omit foreign language, to be strictly confined to training for office work, beginning stenography and typewriting in the first year.

The school spirit of the City College remains wonderfully fine, showing both interest and loyalty. A Student Board, elected by the students themselves, has assumed the successful administration of the discipline in the yard, halls and lunchroom, and the conduct of the students has shown marked improvement in those places. Moreover, the judgments and decisions of the Student Board, subject to review by the principal, have been cheerfully accepted by their fellow students. The practice of holding weekly assemblies has had the effect of unifying and emphasizing school interests, and has therefore been very beneficial. It appears to me that the function of this assembly may be extended in the future by presenting fresh and wholesome talks from the active men of the world. Indirectly, such expressions would have some influence, not only upon the boys' characters, but upon the selection of a vocation in life.

Respectfully submitted,

WILBUR F. SMITH,
Principal.

REPORT OF THE PRINCIPAL

OF THE

BALTIMORE POLYTECHNIC INSTITUTE.

BALTIMORE, June 30, 1913.

MR. FRANCIS A. SOPER,
Superintendent of Public Instruction.

DEAR SIR: I submit the following brief report of the work of this school covering the period from September, 1912, to July, 1913.

The school has a fixed technical course of four years, designed to prepare students for profitable employment in the wide field covered by civil, mechanical, electrical, chemical, and mining engineering, should circumstances or inclinations prevent them from seeking a higher education after graduation.

The results of the past year have in no sense fallen below the standard of accomplishment of the past. Of the hundred and five graduates, thirty-two entered higher institutions of learning, the remainder entering at once into engineering employment at satisfactory compensations.

In no instance did any of those who entered higher institutions receive less than full sophomore standing.

The disadvantage of a divided school and the lack of an assembly room continued throughout the year, but it is an assured fact that the new building on North avenue will have reached a degree of completion that will enable the entire school to be conducted there under one roof by the time set for reopening in September, 1913. There is every reason to believe that the new and improved equipment in the new building, which is unsurpassed by any similar school in the country, will lead to more efficient instruction in the future.

Very respectfully,

WILLIAM R. KING,
Principal.

REPORT OF THE PRINCIPAL OF THE EASTERN HIGH SCHOOL.

BALTIMORE, June 30, 1913.

MR. FRANCIS A. SOPER,
Superintendent of Public Instruction.

DEAR SIR: I beg to submit the following report on the work of the Eastern High School for the term 1912-1913.

I wish first of all to emphasize by repetition at this time a few of the suggestions made in my last report. The necessity for a carefully formulated two-year commercial course becomes increasingly evident year by year. Inquiry addressed directly to pupils who failed to continue their high school course brought the information that about half of them are attending business colleges in order to get the requisite professional equipment in a shorter time than is possible under our present arrangement. I feel sure that practically all of these would have been saved to the high school if the course had been adjusted to their needs. The outline of the proposed two years' course which is in your hands provides for eight hours a week of shorthand and typewriting, begun in the first year, instead of five hours a week, begun in the second, as in the present course. At the close of the second year, the pupil will have the necessary equipment for entering the business world. Two years' additional work is offered to those who are able to continue; nor do I think that the number who would complete the course would be reduced by the change.

The advisability of appointing heads of departments is in my opinion no longer debatable, and I strongly urge that such appointments be made as soon as possible. Virtually, the positions already exist in this school, as the senior teacher in each of the large departments is responsible for its routine. She should, however, have official recognition, an adequate advance in salary, and clearly defined duties.

I wish also again to emphasize the great value of the library to the school, if in the charge of a trained librarian. The assistance which such a person can give to the pupils in their reading and reference work, the system which she brings into the conduct of the detail of the library, the technical knowledge which she possesses in all matters pertaining to library management, and which is always at the service of teachers and pupils, make her presence in the school an absolute necessity. It is highly specialized work, and the salary should be commensurate with the service rendered.

Probably the most important single advance during the year has been the establishment of a course in household arts. The cooking department only has been in operation during the past term, and only first and fourth year pupils have been permitted to take it. During the coming year, however, the equipment for the housekeeping department will be installed, and all pupils will be given the opportunity to enroll.

The commencement in June, 1913, was notable in that the largest class ever sent out from the school—177—received diplomas. This number represented 50 per cent of those who had entered the school four years before.

An experiment which promises to prove successful is the establishment of a summer school to be held during the coming summer for pupils who wish to make up deficiencies or to gain a half-year in one or more subjects. The preliminary enrollment for this school is over 100.

Increasing emphasis has been placed upon the educational importance of the weekly assemblies, of school dramatics and athletics, and of student cooperation in the conduct of the school. All these agencies can be made of great value if properly controlled.

The aim of the faculty of the school is to make an ever closer adjustment of the work of all departments to the needs of everyday life, without for a moment losing sight of the cultural purpose of the high school course. I wish to commend most heartily the spirit of harmony and mutual helpfulness among the teachers of the school, and to express my appreciation of the cordial cooperation extended to me at all times by the superintendents.

Very truly yours,

ERNEST J. BECKER,
Principal.

REPORT OF THE PRINCIPAL OF THE WESTERN HIGH SCHOOL.

BALTIMORE, June 30, 1913.

MR. FRANCIS A. SOPER,
Superintendent of Public Instruction.

DEAR SIR: I beg leave to present, herewith, a report upon the work of the Western High School for the scholastic year 1912-1913.

At the opening of the scholastic year, instruction in the Department of Household Arts was begun. For the first half year only the course in cookery was offered to the pupils. In February, after the necessary equipment had been installed, work in Household Management was added. Although the work in the Department of Household Arts was elective, the total enrollment of pupils was over 600. It would seem from this that the pupils of the school appreciate the opportunity afforded them to secure instruction in this very necessary and useful work.

In my last annual report I made the suggestion that the advisability of dividing the curriculum into about five or six "courses" be carefully studied. I am still of this opinion, and at the present time I am preparing a plan of this kind, which I shall be pleased to submit to you as soon as it is completed.

Another suggestion made last year, that of allowing a certain number of credits for approved work in music pursued in such institutions as the Peabody Institute, will be included in the plan mentioned above.

The Western High School has for some years been experimenting in the matter of pupil government, or rather cooperation of the pupils in matters of school government. There has been created a Student Committee consisting of representatives elected from all the classes in the school. This Student Committee meets regularly to consider such matters as are within its jurisdiction. Up to the present time, the results have been very satisfactory, and it is hoped that in the future the scope of the Student Committee's activity may be increased.

The teachers of physical training feel that there should be a physical examination of pupils in order that the work may be adapted to the needs of individuals. In addition to this, there should be always in attendance, in a high school of this type, some one who has the necessary medical training to be of service to the pupils. Such a person could also furnish instruction in hygiene. I suggest that you consider the advisability of appointing, for regular attendance at this school, a physician who should give pupils the necessary examination before they undertake work in the gymnasium, and who should also give instruction in hygiene. Such a plan is in successful operation in the two girls' high schools in Philadelphia. At the present time, the only physical examination of pupils made in the high school is that of fourth-year pupils preparing to enter the Teachers' Training School. This is conducted by Doctors Lilian Welsh and Mary Sherwood.

I hope that the School Board will continue to grant appropriations for the purchase of books for the Library. I am pleased to report that the number of pupils using the Library has greatly increased, and that the results of this branch of the school's work are highly satisfactory.

Respectfully submitted,

David E. Weglein,
Principal.

REPORT OF THE PRINCIPAL OF THE COLORED HIGH SCHOOL.

Baltimore, June 30, 1913.

Mr. Francis A. Soper,
Superintendent of Public Instruction.

Dear Sir: I beg leave to report that the work for the scholastic year 1912-1913 was concluded with the graduation of seventy-seven pupils (fourteen boys and fifty-two girls from the four-year high school course, and one boy and ten girls from the two-year vocational course) at the Commencement, at the Lyric, Friday evening, June 20, 1913.

In view of the special report submitted to you under date of March 27, 1913, which set forth in detail the state of affairs in this school, it will only be necessary for me to submit the final statistics of the year's work. I desire to say, however, that the work of the teachers has for the most part been very satisfactory. The pupils have shown a splendid spirit both in conduct and in scholarship. We have had the usual number of lectures by members of the faculty, and by outsiders for the entire school, and our quarterly Parents Meetings and monthly Educational Faculty Meetings have been unusually interesting and profitable.

In the course of the year we have had to add one new teacher in the Department of English and History, Miss Orra D. Weaver having been appointed as a substitute in February. The increase in enrollment for September will make necessary the appointment of an additional teacher in Girls' Manual Training, who will be able to teach sewing and designing. The instruction in vocal music has long demanded the acquisition of a resident teacher of music for this school. This need can be satisfied by the appointment of a music teacher who shall also be able to teach some of the commercial branches.

To provide for the increased accommodations, certain changes have been proposed for the shop buildings, which are to be made in the course of the summer, and the Daly Building which has been leased, will be put in condition during the summer for occupancy next September. The Needle Building will not be required further for school purposes.

In conclusion, I desire to express the hope that some provision will be made for increasing the salaries of the teachers in this school, and for the adoption of a regular salary scale.

Finally, I wish to thank the Superintendent and the Board of School Commissioners for the uniform interest and consideration of the needs of this school.

Respectfully submitted,

MASON A. HAWKINS,
Principal.

REPORT OF THE SUPERVISOR OF SCHOOL BUILDINGS.

BALTIMORE, June 30, 1913.

To the Board of School Commissioners.

GENTLEMEN: I have the honor to submit the following report for the scholastic year 1912-1913.

NEW BUILDINGS COMPLETED IN 1912-1913.

School No. 70, William Street and Warren Avenue—Lot, 190 feet by 140 feet; building, 82 feet by 161 feet. This is a first-class three-story and basement building, modern in all of its appointments. It contains twenty-four classrooms of the standard (26 feet by 32 feet) size, each with coatroom, book and teachers' closets; also principal's office and teachers' rooms. The basement contains an assembly hall, large manual training and cooking rooms, boys' and girls' toilets (the teachers' toilets are on the upper floors), heating and ventilating plants, and fuel bins. The building is heated by steam and ventilated by blower fan. A vacuum cleaning system has been installed. Electric gongs operated from the principal's room have been installed for fire drills, recess calls, school assembly and dismissal. Drinking fountains have been provided at convenient points on each floor. There is one fireproof staircase at each end of the building and one in the center. The building is equipped with fire hose at each end of the corridors and basement. The building was dedicated on October 24, 1912, with appropriate exercises. Cost of building, $123,950.

School No. 13, Patterson Park Avenue and McElderry Street—The new addition is 39 feet, 6 inches by 72 feet, 6 inches, with two stories and basement. It contains four classrooms of the standard size, 26 feet by 32 feet, each with coatrooms, bookcases and teachers' coat closets. The basement contains an assembly hall, boys', girls' and teachers' toilets. Two new steam boilers have been installed to heat both the new addition and the old building. Drinking fountains have been installed at convenient points in the new and the old buildings. Two new fireproof staircases have been provided in the new addition. The building is equipped with fire hose at each end of corridors and basement. The building was completed and occupied the first of October, 1912. Cost of the addition, $21,944.65.

BUILDINGS NOW UNDER CONSTRUCTION.

School No. 27, Corner Fayette and Chester Streets—Lot, 115 feet by 182 feet, 9 inches; building, 81 feet, 4 inches by 159 feet, 5 inches; a first-class three-story and basement building, modern in all its appointments. It contains twenty-four classrooms of the standard size (26 feet by 32 feet), each with coatroom, bookcases and teachers' closets, also principal's office and a room for teachers. The basement contains an assembly hall, manual training and cooking room, boys' and girls' toilets, also janitor's, boiler and engine rooms. The building is heated by steam and ventilated by blower fans. There is one fireproof staircase at each end of the building, and one in the center. Drinking fountains have been provided at convenient points on each floor. Electric gongs operated from the principal's room have been installed for fire drills, recess calls, school assembly and dismissal. The building is equipped with fire hose at each end of corridors and basement. The building will be completed by September, 1913. Cost of building, $106,196.

School No. 99, North Avenue and Washington Street—The new addition, 94 feet, 0 inches by 52 feet, 6 inches, has three stories and basement. It contains ten classrooms of the standard size (26 feet by 32 feet), each with coatrooms, bookcases and teachers' closets. The assembly hall is on the first floor. The basement contains the boys' and girls' toilets, heating and ventilating plants. The building is heated by steam and ventilated by blower fans. Electric gongs operated from the principal's room have been installed for fire drills, recess calls, school assembly and dismissal. Drinking fountains have been provided at convenient points in the new addition, and in the old part of the building. The building is equipped with fire hose at each end of corridors and basement. The building will be completed by September, 1913. Cost of the addition, $53,852.

School No. 6, South Ann Street—Lot, 144 feet by 183 feet; building, 83 feet, 11 inches by 178 feet, 5 inches. This is a first-class two-story and basement building, modern in all its appointments. It contains sixteen classrooms of the standard size (26 feet by 32 feet), each with coatroom, bookcases and teachers' closets; principal's offices, teachers' and rest room on the first floor, and an open-air class-room on the roof with rest room, kitchen, bath and toilet rooms. Toilets are provided at each end of the second-story corridor for the teachers, boys and girls. The basement contains an assembly hall, boys' and girls' gymnasiums and shower-baths, toilets, the heating plant and fuelroom. The building is heated by steam and ventilated by blower fans, and is equipped with a vacuum cleaning system. Electric gongs operated from the principal's room for fire drills, recess calls, school assembly and dismissal have been installed. Drinking fountains have been provided at convenient points on each floor and in the basement. The building has four fireproof staircases, with the classrooms opening directly on them. The building is equipped with fire hose at each end of corridors and in the basement. The building will be completed by September, 1913. Cost of building, $117,475.

School No. 22, Hamburg and Scott Streets—Lot, 163 feet by 200 feet; building, 83 feet, 6 inches by 179 feet, 2 inches.

This is a first-class three-story and basement building, modern in all its appointments. It contains twenty-four classrooms of the standard size (26 feet by 32 feet), each with coatrooms, bookcases, teachers' closets, principal's office and teachers' rooms. The basement contains an assembly hall, manual training and cooking room, boys' and girls' toilets (toilets are also provided on the second and third stories for the teachers, boys and girls), boys' and girls' shower-baths, heating and ventilating plants, janitor's and fuelroom. The building is heated by steam and ventilated by blower fans, and is equipped with a vacuum cleaning system. Electric gongs operated from the principal's room for fire drills, recess calls, school assembly and dismissal have been installed. Drinking fountains have been installed at convenient points on each floor and in the basement. The building has four fireproof staircases from the pavements up to the third story, and one on the inside from the first to the third floors. The building has eight entrances. On the roof there are two open-air classrooms with kitchen, bath and toilet rooms. The building is equipped with fire hose at each end of corridors and basement. The building will be completed by November, 1913. Cost of building, $152,874.

The new Polytechnic Institute on North avenue will be completed by October, 1913. There are accommodations for 1,300 pupils: thirty-five classrooms; four laboratories—mechanical, electrical and physical; eight drawing rooms; eight shops—machine, pattern, forge, carpentry and sheet metal; a library, and an assembly hall with a seating capacity of 400.

The building is equipped with approved systems of plumbing, heating, ventilating, electric lighting, fire alarm, telephone, call-bell, progral clock, vacuum cleaning and sprinkling.

The laboratory equipments provided for are as follows:

Mechanical Laboratory—A 100 kw turbo-generator set; a 100 kw four-valve tandem compound engine; a 100 kw cross-compound engine; a 100 H. P. inverted triple-expansion marine engine; a 60 H. P. inverted compound marine engine; a 46 H. P. high-speed engine with shaft governor, shifting eccentric, and piston valve; a 25 H. P. plain D-slide valve engine; a 30 H. P. Autocar gasoline engine; a gas engine and producer; an air compressor; a water motor; a motor-driven torsinal testing machine; a motor-driven oil testing machine; a motor-driven Riehle testing machine—tension and compression—of 50,000 pounds capacity; surface condenser; independent air pump; and a boiler capacity, aggregating 5,000 square feet of heating surface.

Electrical Laboratory—Tables with electrical connections to supply current of any nature or voltage; switchboard and panel-board to connect tables to storage batteries or to any other source available; a 2-kw rotary converter for facilitating changes in nature of current supplied when necessary; a 2-H. P. motor for direct current; a 2-H. P. three-phase induction motor; necessary transformers and starting devices; a flame arc lamp; a mercury arc rectifier; a DeForrest wireless telegraph set; storage battery to operate signal bells, fire alarm and telephone systems, and to furnish current for experiments.

Chemical Laboratory—Tables connected to gas and water and with suction exhaust for removing poisonous gases (classrooms similarly equipped) and special balance-room.

Physical Laboratory—Tables similar to those of the electrical laboratory, but connected with gas and water supply; and physical apparatus necessary for the standard classroom demonstration and laboratory work.

The equipment for the machine, pattern, forge, carpentry and sheet metal shops, and for the drawing rooms are of the most modern and advanced character.

Portable Buildings.

Two portables were removed from School No. 99 and placed in the girls' yard of School No. 68.

One portable was removed from the Parental School and placed in the yard of School No. 65.

Four portables were removed from School No. 83 to School No. 47; two were placed in the boys' yard and two in the girls' yard for the use of School No. 24.

REPAIR SHOP.

A large number of old double desks were altered into single desks and placed in sixty-eight school buildings, and a large number in the buildings were scraped and varnished; and a large number of running feet of slate blackboards and burlap were placed in the classrooms. There were many teachers' desks, wardrobes, bookcases and chairs repaired and varnished, also shelving and hat and coat hooks were put in. The new furniture, blackboards and burlap were placed in school building No. 70. In addition to School No. 63, and the addition to School No. 64, three portable buildings were moved. Two were placed in the yard of School No. 77, and one in the yard of School No. 83. The new furniture, blackboards and burlap, platforms and shelving were placed in the new Polytechnic Institute, corner North avenue and Calvert street, and new schools Nos. 22, 27, 6 and the ten-room addition to No. 99. Four portable buildings were moved from School No. 83 and placed in the yards of No. 47; two moved from No. 99 and placed in the yard of No. 68; one moved from the Parental School and placed in the yard of No. 65.

School No. 83, Lakewood and Philadelphia Avenues—The building is 71 feet by 142 feet, 10 inches, a first-class three-story and basement building, modern in all its appointments. It contains eighteen classrooms of the standard size (26 feet by 32 feet), each with coatroom, bookcases and teachers' closets; also the principal's office and a room for teachers. The basement contains an assembly hall, boys' and girls' toilets and shower-baths, two unassigned rooms, heating and ventilating plant. The building is heated by steam, and ventilated by blower fan, and is also equipped with a vacuum cleaning system, electric gongs from the principal's room for fire drills, recess calls, school assembly and dismissal. Drinking fountains have been provided at convenient points on each floor and in the basement. The building has three fireproof staircases, and will be completed by March 1, 1914. Cost of building, $103,977.

Respectfully submitted,

HENRY R. DAVIS,
Supervisor of School Buildings.

STATISTICAL REPORT

FOR THE SCHOLASTIC YEAR, 1912-13, WITH STATISTICS FOR THE SUMMER SESSION OF THE VACATION SCHOOLS, 1913, AND PERMANENT WITHDRAWALS DURING VACATION ADDED

Statistical Report for the Scholastic Year 1912-13, with Statistics for the Summer Session of the Vacation Schools, 1913, and Permanent Withdrawals During Vacation Added.

By EDWIN HEBDEN, Statistician.

For the purpose of studying our problems, the statistics for the different grades of schools as well as those for white and for colored schools are presented in separate tables. Wherever it has been deemed desirable to combine statistics of different kinds of schools, this has been done.

Table 1 gives a general survey of all day schools. It will be seen that during the scholastic year there were enrolled in these schools a total of 73,820 pupils. There remained on the roll at the close of the year 66,506 pupils, the difference, 7,314, being the number that withdrew from this system during the scholastic year. The total average number belonging during the year is 63,750, the total average attendance, 57,263; thus showing the rate of attendance to be the rather high figure of 90%.

TABLE 1.

GENERAL SURVEY of all day schools, showing: Number of buildings and numbers of superintendents, supervisors, teachers, and pupils by race, sex, and grade of schools; also grand totals.

*Principals giving more than half their time to supervision and administration counted in the faculties of their respective schools; supervisor of manual training counted in the faculty of Polytechnic Institute.

Table 2 presents a comparison of the numbers and the several kinds of schools during the scholastic year just closed with the previous year, 1911-12. It is interesting to note the general increase in all schools except the higher colored schools. The net increase for all day schools over the previous year is seen to be 3,152 pupils, of whom 2,911 are found in the elementary schools, 265 in the secondary schools. The loss of 25 students in the Colored Training School with an increase of but one in the white Teachers' Training School is a matter which is brought particularly to the attention of the administration, these schools being the main source of supply for the teachers in the schools.

TABLE 2.

Table 3 still further separates the figures for comparison with the previous scholastic year. It is of much importance to note not only whether the several grades show an increase or decrease in enrollment over the previous year, but more particularly whether the pupils are progressing and advancing so that the upper grades show an increase corresponding to the increase in the lower grades. If the contrary is the case, it can only result from the holding back of pupils in the lower grades. Table 3, therefore, is prepared to enable the Board of Superintendents to see the development of their problem as a whole and thus enable them to determine upon the proper policy to be pursued.

*Included in net roll.

†Includes four and six post graduates, respectively.

Tables 4 and 5 continue similar tables presented in last year's report. The trend of movements in any school system cannot be determined upon the basis of any one year's results. It was for that reason that two different series of years (one for the entire system, elementary and secondary together; the other for the elementary schools alone), the last year of each series being the scholastic year under report, are selected to show the average rate of movement and the direction in which it trends. A study of these two tables and the comparison with similar figures in last year's report show that, for the ten years closing June, 1913, there has been a small increase over the ten years ending June, 1912, in the per cent of children advancing into each succeeding grade in both elementary and secondary schools. The same is true, but in a less marked degree, in the elementary schools alone for the last five years. A most significant fact is seen by comparing the rates per cent advancing into the several grades in the elementary schools for the period 1892 to 1901, as shown in the first part of table 4, with the per cent of pupils advancing into the successive elementary grades, as shown in table 5, for the five years ending June, 1913.

The statistics in all school systems should be studied as a whole and in their relation to each other. When the table showing the number and rate per cent of pupils over age or over time or repeating, happens to be noticed by itself, there comes a feeling that something is failing to meet requirements adequately. It is only when a comparison, such as I have noted above, is made that the real conditions and the development of the system can be properly apprehended. All school systems in this country have these problems of over age, over time, repetition, and adaptability of the course of study definitely forced upon them. It must not be supposed that conditions are worse now than they were fifteen, twenty years ago, or longer, as is often stated. As a matter of fact they are much better; but educators are studying their problems very much more closely, are truthfully presenting them to boards of education and the public, and are courageously facing their difficulties. That conditions are improving is shown very definitely by noting the rate per cent of pupils advancing through the elementary grades in the two tables above. For the series covering the earlier ten years, 63.8% of pupils advanced on the average from the first grade to the second grade. In the latter table, covering the series of five years ending June, 1913, 79.2% is the corresponding rate, an increase of 15.4% for the later period. In the average number advancing into the third grade, 17.3% increase is noted; into the fourth grade, 12%; into the fifth grade, 9.8%; into the sixth grade, 7.6%; into the seventh grade, 6.6%, and into the eighth grade, 5.4% increase over the previous period. No more convincing figures could be produced to show the general trend of school development.

Table 6 presents the general survey of the night schools for the winter term of 1912-1913, and table 7, a comparison of the numbers with the previous year. In these schools again there is a marked increase not only in the number enrolled but also in the rate per cent of attendance. The total enrollment was 8,788; the average number belonging, 4,310, with an average attendance of 3,188. An increase in the earnestness of the night school pupils is definitely shown by the increase in the number continuing through the year, 826 over the preceding year.

TABLE 6.

General Survey of all night schools for the year 1912-13, showing: Number of schools, teachers, and pupils by race, sex, and grade of schools; also grand totals.

Table 9 is a general survey of the work done in the summer schools during the summer vacation of 1913. The figures here presented show a definite gain resulting from these schools. Seven hundred and seventy-one white pupils started the work of reviewing that in which they had failed during the regular sessions. Six hundred and twenty continued to the close of the summer term, and 511 of these, or 69%, succeeded in making up their deficiencies. This means a saving of at least 511 half-years of their school lives and probably the holding of many of them in the schools when they would otherwise have withdrawn discouraged. One hundred and ninety-three colored children started in the same kind of work. One hundred and forty-five of them continued to the close of the term, and 72, or 37%, succeeded in gaining promotion.

In the vocational school, 365 entered upon the work; 197 continued to the close of the term, and the figures showing satisfactory work in the various departments indicate a success in this line of work also.

Table 10 is the grand summary showing the number of pupils of all kinds that were enrolled in the schools of this city during 1912-1913. It is not reasonable to compare the totals with those of the previous year, since there is the added feature of summer vacation schools.

*Six months only, January to June. Prior to 1911, annual reports covered the calendar year; subsequent to 1911, they cover the scholastic year, September to June inclusive.

White Schools.

It is very desirable to strike the balance showing the gain or loss by reason of pupils entering this system from other schools and those leaving this system to attend other schools, as well as in the matter of withdrawals, which latter has always been done.

Table 12 has been prepared to meet this need. It shows the number of pupils who entered our schools from each of the several sources. A comparison with the later tables showing withdrawals enables one to see whether or not our schools are gaining or losing as stated. This table, in addition, meets the requirements of the United States Bureau of Education in that it will enable that bureau to avoid duplicating entries.

TABLE 12.

Enrollment—White Pupils.

Showing number of white pupils admitted to the schools by sources whence they came and by grades of schools entered during the scholastic year 1912-13.

Sources.	Number of pupils admitted during scholastic year 1912-13.											
	Normal schools.			Secondary schools.			Elementary schools.			All white schools.

Tables 13, 14, 15, 16, and 17 refer to the white normal school. Less significance attaches to the matter of ages or the time in school and other points than to the secondary and elementary schools. It is well, however, to note table 14, so as to see the amount of previous educational work done by those who expect to engage in the work of teaching.

TABLE 13.

Distribution of white pupils in normal schools by ages and grades, June 30, 1913. Showing also for each grade and for totals by ages the number of pupils under normal age, of normal age, and over normal age (retarded). Tables 18 to 25, inclusive, refer to the white secondary schools. The elementary and the secondary schools being but two portions of one continuous system of education, the figures presented in the foregoing tables will be studied and charted at the same time as those in the elementary schools. The tables are held separate for readiness of reference and for integrating the problems specially pertaining to those schools.

Besides the table showing the number of pupils of normal age, under age, and over age, similar to last year, additional tables are furnished this year for all the schools showing the relation of the number of years in school to the grade attained, thereby giving real acceleration and repetition, the number of pupils withdrawing from each of the several grades, the causes from which they withdraw, and the ages at which they withdraw. Table 21 is added to show the number of pupils who withdrew during the vacation of 1913, thus giving the total loss by withdrawal from those enrolled in the schools during the previous scholastic year (1912-13). These figures will be charted along with those of the first eight grades after those tables have been presented.

Another new table this year is that giving the attendance of pupils by groups of days. Table 25 shows the attendance of the high school pupils during the entire year. This, of course, includes those who may have withdrawn at some time during the year as well as those who continued to the close of the term. From this table it is very easily seen that by far the greater number of these children are very regular in their attendance, 214 of them having no absence whatever, 306 attending from 180 days to 191, and 2,566 attending 160 to 179 days. The relation of irregular attendance to non-promotion can be worked out by comparing this table with the table showing non-promotions.

TABLE 18.

DISTRIBUTION OF WHITE PUPILS IN SECONDARY SCHOOLS BY AGES AND GRADES, JUNE 30, 1913.

Showing also for each grade and for totals by ages the number of pupils under normal age, of normal age, and over normal age (retarded). Normal ages for each grade shown between the heavy horizontal lines in body of table.

WHITE ELEMENTARY SCHOOLS.

Table 26 shows the ages of the pupils in the several grades. The numbers of children under age, of normal age, and over age are given.

Following the system of other cities, two succeeding years are taken as the period covering normal age; for instance, pupils between 6 and 8 years of age are counted as being of normal age for the first grade. As will be seen later, in considering the number of pupils over time and the number of pupils repeating, this produces a seeming absurdity; because we shall have a greater number of pupils over time than are over age and also a still larger number who are repeating. As a matter of fact, by far the greater number of children who enter the first grade do so shortly after their sixth birthday; and it would be entirely proper to hold the one year, from six to seven, as the normal age for pupils of the first grade. This would show a greater number of pupils over age; but since that is the real fact, it ought to be so shown, and we should then be able, by making a proper comparison with the over time pupils, to see the extent to which late entrance into the schools affects the progress of pupils through the grades. This paragraph is written not only for the information of the Board of Superintendents, but also to bring the matter definitely before the National Bureau of Education and the superintendents of other cities who may receive and read our report.

TABLE 26.

GRADE—AGE.

Distribution of white pupils in elementary schools by ages and grades, June 30, 1913. Showing also for each grade and for totals by ages the number of pupils under normal age, of normal age, and over normal age (retarded). Normal ages for each grade shown between heavy horizontal lines in body of table.

Table 27 and Fig. 1, following it, present and chart the number and rate per cent of pupils who are over age for their grade based upon the table and method just mentioned. It will be noticed there is a steady increase in the percentage of retardation to the fifth grade, inclusive, following which there is a steady decrease in the rate per cent through the balance of the entire system. A comparison with the figures of last year shows a slight increase in the numbers of those over age, as indicated by the increased rate of nine-tenths of one per cent.

TABLE 27.

Showing number of white pupils under age for the grade, of normal age, over age (retarded), and the corresponding rates per cent for each grade of the elementary and the secondary schools, June 30, 1913.

Fig. 1a—Normal Age.

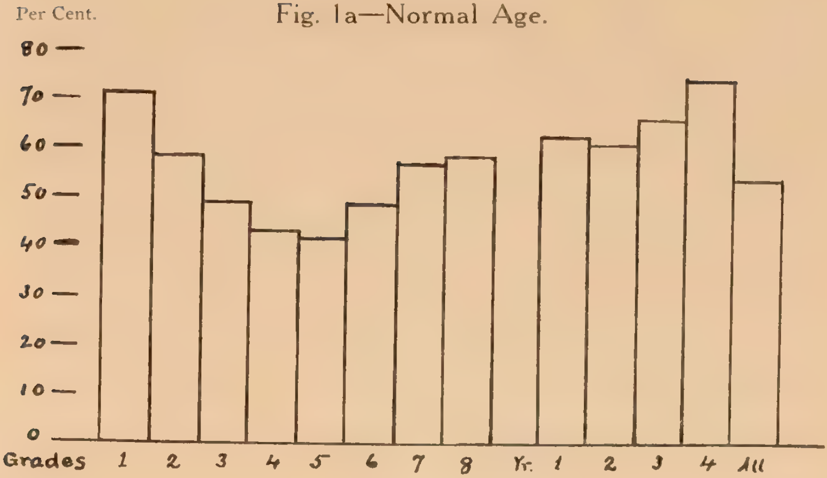

Fig 1b—Under Age.

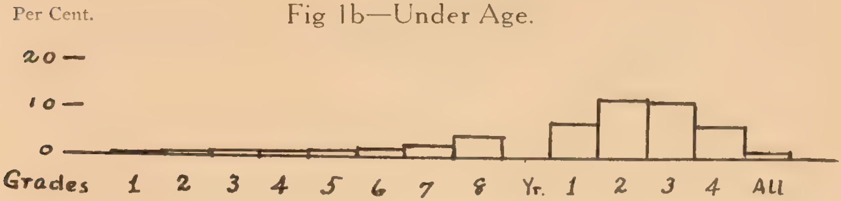

Fig. 1c—Over Age.

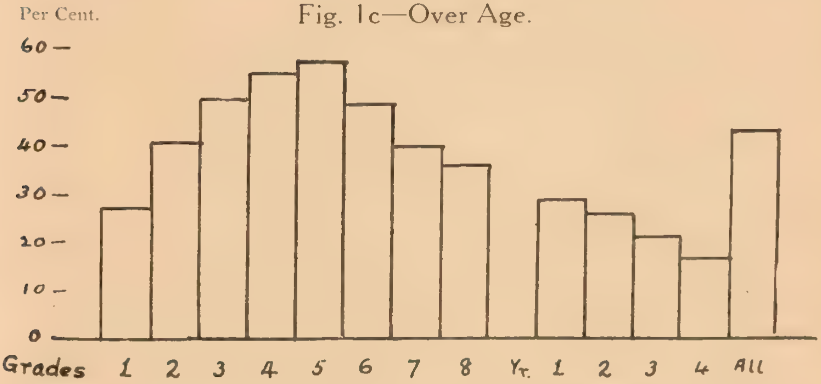

Fig. 1—Graphs illustrating table 27: (a) The several columns show the per cent of white pupils in the several grades of the elementary and the secondary schools on June 30, 1913, who were of normal age for the grade; (b) the per cent of under-age pupils; (c) the per cent of over-age pupils.

Table 28 and its accompanying summary, table 29, with rates per cent and illustrative chart, Fig. 2, show more definitely the school responsibility for the advancement of children, by giving the number of years the children have been at school. In this table a child who has been at school for but one year is supposed by right to be in the first grade. If he shall have been at school two years, he ought to be in the second grade under normal conditions. If he still remains in the first grade, he is one year over time, and so on for each successive grade. The table, therefore, shows the number of children who have taken the normal time to accomplish the grade work, those who have accomplished it in less than normal time, a real acceleration, and those who have required more than normal time, which is a real repetition.

As mentioned previously, the seeming absurdity of the over age figures now becomes apparent; for instance, comparing table 29 with table 27, in the grades 22,961 pupils appear to be over age, while the number over time is shown to be 27,565. One would expect the number over age to be somewhat less than the number over time, because of the number repeating grades; but the difference is too great. One can hardly suppose that nearly 5,000 children were admitted to the first grade under six years of age when the actual grade age table shows but 30 to have been so admitted for the past scholastic year.

The percentage of normal time pupils is highest in the first grade and decreases steadily to the sixth grade with a marked advance in the seventh and eighth grades. The secondary schools show a still greater percentage of normal time pupils, all of which is proper and to be expected. The rates per cent of over time pupils show that the crucial grades are the fourth, fifth, and sixth. These correspond to the grades containing the largest percentage of over age children. The chart graphically illustrates these points.

TABLE 28.

GRADE TIME.

Distribution of white pupils in elementary schools by years in school and grades, June 30, 1913. Showing also for each grade and for totals, the number who have been in schools less than normal time (accelerated), normal time, and more than normal time (repeating). Normal time shown between heavy horizontal lines in body of table.

Fig. 2a—Normal Time.

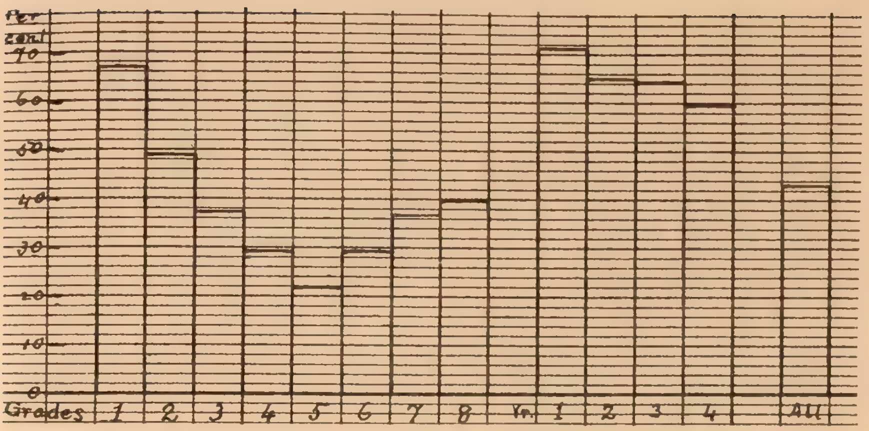

Fig. 2b—Under Time.

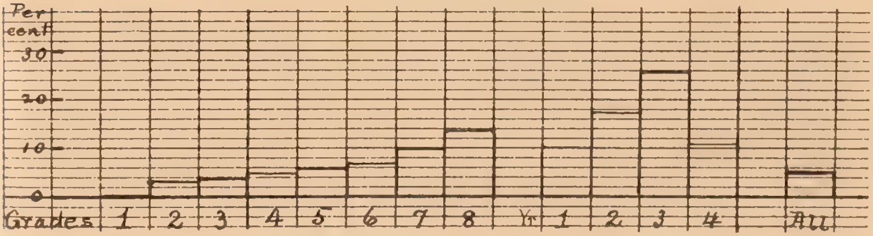

Fig. 2c—Over Time.

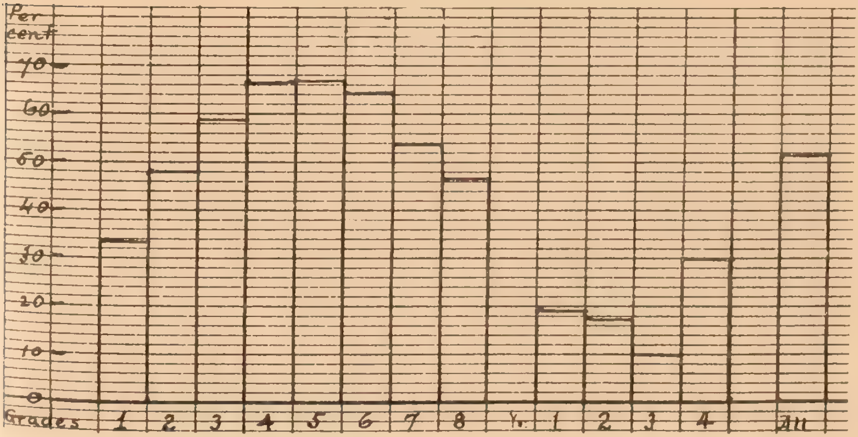

FIG. 2.—Graphs illustrating table 29: (a) The several columns show the per cent of white pupils in the several grades of the elementary and the secondary schools on June 30, 1913, who have been at school the normal number of years, according to the grade attained; (b) the per cent of under-time pupils; (c) the per cent of over-time pupils.

Table 30 shows the number of pupils withdrawn from each grade during the scholastic year and the causes for such withdrawals. The largest numbers are lost to our city by removal from the city. It is not to be supposed, however, that these children are permanently withdrawn from school altogether. It is probable that they continue their education in the schools of the localities to which they remove. The chief cause for absolute withdrawal from school is given as the necessity to go to work. The grade losing the largest number of children because of this reason is seen to be the seventh, with the sixth and fifth showing nearly the same loss.

Table 31 contains the supplementary figures for those withdrawn during vacation, and the chart is based upon the percentages shown in this table. Here again the column for work is prominent.

Fig. 3—Withdrawals, Causes.

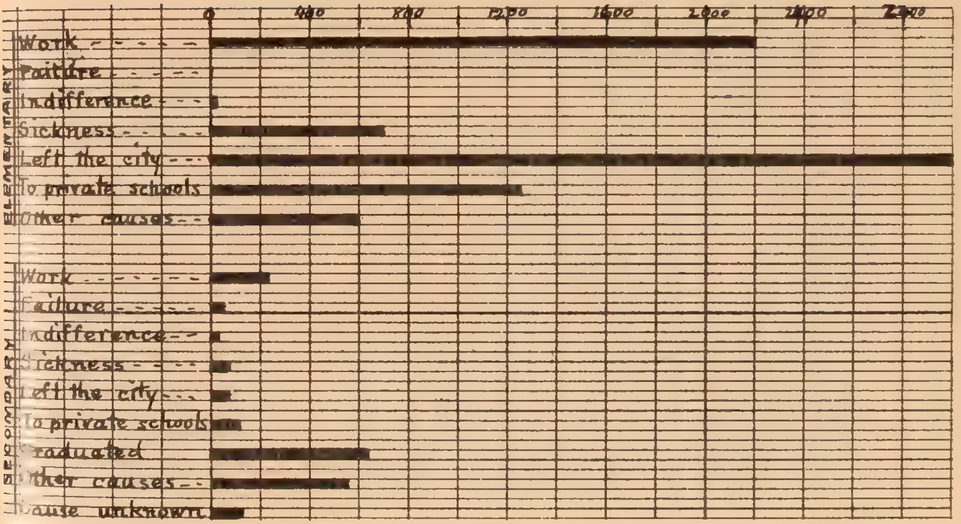

FIG. 3—Graph illustrating tables 31 and 21. The number of white pupils withdrawn from the elementary and the secondary schools during the scholastic year, for each of the causes given.

It is not only desirable to know why our children leave school, but at what age they leave school and from what grades they go. Tables 32 and 33 present figures for the ages, illustrated by the chart shown in Fig. 4; and table 34, with chart, Fig. 5, shows the grades from which they leave.

The effect of the School Attendance Law is very definitely seen in the number of children leaving immediately after the fourteenth birthday. One thousand three hundred and forty-six pupils withdrew at that age, the largest number for any age.

The first grade does not show so large a rate per cent of loss by withdrawals as some of the other grades, the basal number itself being so much greater; still, the fact that as many as 1,023 children drop out of the first grade of the elementary schools needs notice. Five hundred and seventeen of these children left the city, 157 of them entered private or parochial schools, 221 were withdrawn because of physical disability or death; thus nine-tenths of these withdrawals are beyond the control of the schools.

The grade having the next largest number of withdrawals, which would probably produce the highest rate per cent, is the sixth grade. One thousand and thirty-six children were lost by withdrawal during the scholastic year and during the summer vacation. Four hundred and eighty-one of these continued to the close of the year, but failed to return to schools in September. The number of pupils who failed to return to the schools after the summer vacation appears to be nearly half as many as those that leave during the scholastic year. The graph illustrating this table brings the points presented prominently before the eye.

Fig. 5—Withdrawals, Grades.

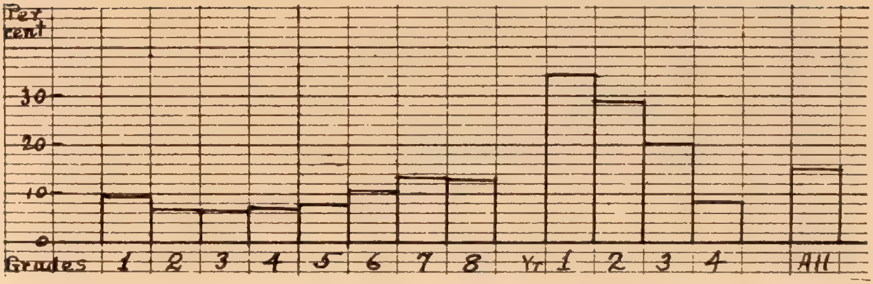

FIG. 5—Graph illustrating tables 34 and 24. The several columns represent the per cent of the total enrollment of white pupils during the scholastic year 1912-13 in the several grades, who were withdrawn, excluding the number graduated from secondary schools.

The next nine tables form a study of promotions, non-promotions, repeating, and the causes entering thereinto.

Table 37 summarizes the figures given in tables 35, 35b, and 36. The number of children promoted and the number not promoted for each grade are shown, thus fixing the total number who should be considered as candidates for promotion. These figures show that over 78.3% of all the children who were available for promotion during the year were advanced to the next grade. Twenty-one and seven-tenths per cent were not so advanced. The grade showing the largest percentage not promoted is the first. It will be illuminating to follow the figures of this grade through the various tables, particularly to note the causes given for non-promotion and the studies in which the failures occur. The matter of attendance should also be correlated therewith. It will be profitable to make a similar study for each and every grade. The tables have been prepared for this purpose. The chart graphically presents the points shown in the table.

TABLE 35.

PROMOTIONS.

Promotions of white pupils, normal and repeating, in elementary schools.

Eighth grade	1,988	178	2,166	91.8	8.2
Totals	40,200	11,153	51,353	78.3	21.7

Fig. 6a—Promotions.

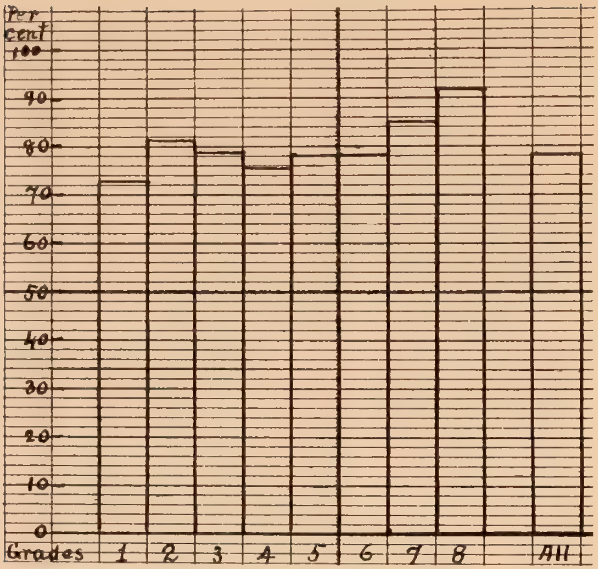

Fig. 6b—Non-Promotions.

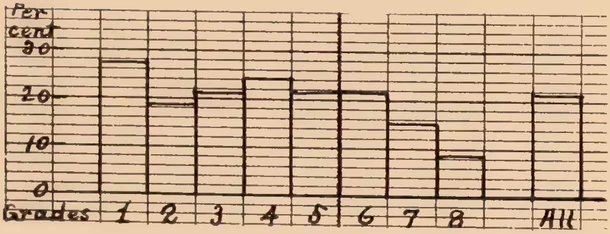

FIG. 6—Graph illustrating table 37. In the upper graph (a) the columns represent, severally, the per cent of white pupils in each grade promoted during the scholastic year 1912-13; in the lower graph (b) the columns similarly represent those not promoted.

Table 38 gathers together the figures from the preceding tables to show the number of children who were repeating the grade during the last year in each separate grade. Some of these children, of course, gained promotion. Others, again, did not, and must continue repeaters next year.

The base for calculating the rate per cent of these pupils is properly the sum total of all who had the right to be considered as available for promotion. In this table we find the first grade as containing the largest percentage of repeaters.

A word of explanation is necessary in order to make clear why it is possible that there should be 3,474 repeaters when there are but 3,157 over time and 2,695 over age. The reason why there should be a larger number of over time pupils than over age has been shown to be the allowance of two years for the normal age for a grade. The number of pupils given as over time, 3,157, does not include any of those who withdrew during the year. The number repeating does include all such pupils who were counted as either promoted or not promoted in the total of 10,040 for this grade. The same explanation is due for each of the other grades. The chart shows that after the first grade, the fourth grade was responsible for the largest percentage of repeating during the past year, followed respectively by the third, second, fifth, sixth, seventh, and eighth.

It is to be regretted that the figures for promotion, non-promotion, etc., cannot be given for the secondary schools. It is hoped that some method of bookkeeping will be devised in these schools whereby this important matter may be so tabulated as to admit of definite study in the future.

TABLE 38.

Showing the number of white pupils the second time or longer (repeating) in the same grade during the scholastic year 1912-13, and the corresponding rates per cent for each grade in the elementary schools.

GRADES.	Maximum number of possible promotions.	In grade second time or longer.							Per cent of pupils repeating.
		Gaining promotion.		Not promoted.		Totals.			
		Boys.	Girls.	Boys.	Girls.	Boys.	Girls.	Totals.

Table 39 shows the causes for non-promotion stated by the teachers, who were directed to give only the chief cause in each case, disregarding for this table other contributing causes. The late entrance and early leaving in this table mean entrance some time after the beginning of this school year whether previously at school or not, and leaving before the end of the year. Some of our pupils, whole families in fact, about the first of May, go out into the counties of the state to work during the summer on farms, picking berries and gathering fruit and vegetables; others, during the same period, work in the canning establishments. The majority of these pupils do not return to school in the fall until the middle and latter part of October. This is the late entrance and early leaving covered by this table.

Following up the first grade again, it is found that the greatest number fail of promotion because of what is stated to be inability to do the work of the grade (mental incapacity). It is noticeable that this continues to be the chief cause given through each succeeding grade till the sixth grade is reached, in which grade and in the two succeeding grades indifference alone precedes low ability.

Table 39-b has been prepared for comparative study upon the percentage basis. This table as well as the chart illustrating it shows the three main causes for non-promotion to be low ability, indifference, and irregular attendance.

TABLE 39-b.

NON-PROMOTIONS IN WHITE ELEMENTARY SCHOOLS—RATES PER CENT FOR CAUSES.

Per cent of total number of non-promoted pupils in each grade by causes therefor. The rates per cent in this table correspond to the numbers in the columns of totals in the preceding table.

CAUSES.	Rates per cent.								
	First Grade.	Second Grade.	Third Grade.	Fourth Grade.	Fifth Grade.	Sixth Grade.	Seventh Grade.	Eighth Grade.	All Grades.
Irregular attendance...	16.1	12.7	16.3	16.2	18.0	16.6	15.3	9.0	15.8
Late entrance, early leaving............	4.1	6.9	6.0	5.8	3.6	4.1	3.5	6.2	5.0
Personal illness.......	9.8	7.8	6.9	5.6	6.2	5.3	4.8	4.0	7.2
Physical defects.......	4.0	3.9	3.8	3.0	2.2	1.2	2.2	1.7	3.2

	100.0	100.0	100.0	100.0	100.0	100.0	100.0	100.0	100.0

Fig. 8—Non-Promotions, Causes.

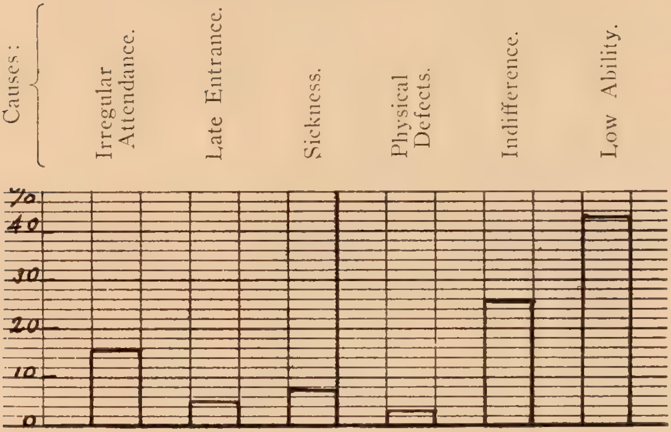

FIG. 8—Graph illustrating table 39-b. Each column respectively represents the rate per cent of non-promoted white pupils in all the elementary grades, reported by teachers as having failed of promotion chiefly by reason of each of the several causes stated. Less potent contributing causes are disregarded in the make-up of this chart.

It is not enough to know why children fail, it is necessary also to know in what studies they fail in order that the course of study may receive proper consideration.

Table 40 gives the number of children failing in each study in each grade. Again following the first grade, we find that, of the 2,755 children who failed, 2,198 failed in reading, the point of greatest difficulty, and 1.846 failed in arithmetic. The totals for all grades show that arithmetic is the chief stumbling block to those who fail. For the 11,153 who failed in all the elementary grades, white schools, arithmetic leads as the most difficult study with 8,716. This figure is significant and calls for earnest study and investigation, especially when we recall that, when measured by the test given last year, Baltimore ranked with the highest among the cities in this country in the ability of the pupils in arithmetic.

Table 40-b has been prepared for a comparative study of the several grades by means of rate per cent. The chart as well as this table shows the prominent place that arithmetic occupies.

TABLE 40.

Table 41 presents the attendance of the children in the various grades. It has been prepared so that comparison can be made with any and every other table to correlate as closely as may be the per cent of irregular attendance with the per cent of failure in any regard. For this purpose it should prove of great value.

The table which closes the white schools is really a comparative study of related data in order to approximate to some extent the co-efficient of school efficiency. For this purpose, it was necessary to use one figure as a base of calculation that should serve for every purpose throughout the entire grade. That which is properly used is the total enrollment of children in the grade for the entire year. Below each number indicating the pupils under the several headings, the italics show the corresponding rate per cent. Starting with the total enrollment, the next column shows the loss during the year. The difference between these two must produce those remaining at the close of the year, which we term "the net roll," but might better be termed the "true register." The number of pupils over age and over time of those who remain at the close of the year follow. These are given as the actual persisting items. The next seven columns show the effects of the work for and during the entire year, the first four columns giving the numbers promoted and the following three the numbers not promoted. The sum of the numbers promoted and non-promoted, of course, give the number of maximum possible promotions; while the sum of those promoted and non-promoted, who have been in the grade for the second time, or longer, gives the total number of repeaters. This is arranged for each grade in order to present in a summarized related form figures which are so closely related as factors of the result produced.

TABLE 42.

EFFICIENCY—WHITE ELEMENTARY SCHOOLS.

Measurement of the school efficiency of white elementary schools as shown by the numbers of pupils accomplishing the work or failing, expressed in the corresponding rate per cent based throughout each grade upon the total enrollment in that grade, thereby giving a uniform basis for comparing normal accomplishment, acceleration, retardation, and repetition within each grade and for comparing one grade with another.

GRADES.		Total enrollment this year.	Withdrawn from this system during year.	As of June 30, 1913.			Number promoted during year.				Number not promoted.			Max. number available for promotion (b+d).	Number repeating grade this year (d+c).
				Net roll or register.	Pupils over age.	Pupils over time.	Less than ten months in grade.	Ten months in grade (normal).	Ingrade second time or longer (a).	Total number promoted (b).	In grade first time.	Ingrade second time or longer (c).	Total not promoted (d).

Colored Schools.

The tables and figures for the colored schools are actually the same in number and kind as those presented for the white schools. The data here presented seem to show the need for more detailed and analytical study than has been given to the data for the white schools. As this problem is one of great interest, the statistician expects to make such a study within the next two months. He will submit it to the board, if desired. in a supplementary report.

TABLE 43.

ENROLLMENT—COLORED PUPILS.

Showing number of colored pupils admitted to the schools by sources whence they came and by grade of schools entered during the scholastic year 1912-13.

Sources.	Number of pupils admitted during scholastic year, 1912-1913.											
	Normal schools.			Secondary schools.			Elementary schools.			All colored schools.

TABLE 71-b.

NON-PROMOTIONS IN COLORED ELEMENTARY SCHOOLS—RATES PER CENT OF FAILURES IN STUDIES.

Per cent of total number of non-promoted pupils in each grade failing in the several studies. The rates per cent in this table correspond to the numbers in the columns of totals in the preceding table.

STUDIES.	Rates per cent.								
	First Grade.	Second Grade.	Third Grade.	Fourth Grade.	Fifth Grade.	Sixth Grade.	Seventh Grade.	Eighth Grade.	All Grades.
Reading	91.0	81.7	43.3	42.5	23.4	13.6	13.0	12.5	66.1
Spelling	3.4	25.1	39.4	37.9	22.3	25.9	39.1	31.2	21.2
Composition	1.6	8.1	8.0	20.3	31.4	45.7	17.4	40.6	10.1
Language and grammar	3.1	13.0	30.1	35.9	65.1	40.7	39.1	84.4	20.5
Arithmetic	40.9	65.7	59.6	75.8	84.6	63.0	56.5	75.0	57.6
History	.....	.....	2.3	14.4	22.3	43.2	21.7	71.9	*14.1
Geography	.....	.....	2.9	13.1	17.7	27.2	21.7	25.0	*10.8

*Rates per cent based on 1,122, the total number of pupils taking these studies, the first and second grades being omitted.

Fig. 18—Non-Promotions, Failures in Studies.

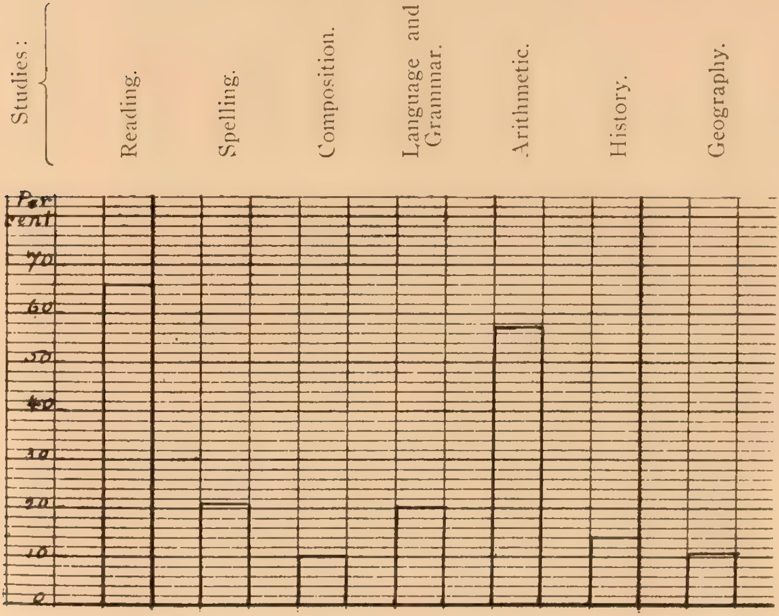

FIG. 18—Graph illustrating table 71-b. Each column respectively represents the rate per cent of non-promoted colored pupils in all the elementary grades failing in the several studies.

TABLE 73.

EFFICIENCY—COLORED ELEMENTARY SCHOOLS.

Measurement of the school efficiency of colored elementary schools as shown by the numbers of pupils accomplishing the work or failing, expressed in the corresponding rates per cent based throughout each grade upon the total enrollment in that grade, thereby giving a uniform basis for comparing normal accomplishment, acceleration, retardation, and repetition within each grade and for comparing one grade with another.

GRADES.		Total enrollment this year.	Withdrawn from this system during year.	As of June 30, 1913.			Number promoted during year.				Number not promoted.			Max. number available for promotion (b+d).	Number repeating grade this year (a+c).
				Net roll or register.	Pupils over age.	Pupils over time.	Less than ten months in grade.	Ten months in grade (normal).	In grade second time or longer (a).	Total number promoted (b).	In grade first time.	In grade second time or longer (c).	Total not promoted (d).		
First grade....	Number..	2,777	274	2,503	1,259	1,481	75	697	706	1,478	489	514	1,003	2,481	1,220

BOARD'S REPORT

Baltimore, January 1, 1914.

To the Honorable the Mayor and City Council of Baltimore.

Gentlemen:

In submitting our annual report as members of the Board of Visitors to the Baltimore City Jail, we desire to respectfully call your attention to the general good condition of this institution, as shown by the reports of Warden Lee; Dr. George L. Wilkins, Jail physician; and Mr. Harry C. Martin, clerk.

During the past year the Board has adopted a system of establishing schools for both men and women, thereby not only adding to the mental comfort of the inmates by occupying their time, but also improving, to a most satisfactory extent, the neglected education of some of the prisoners, so that when they leave the prison they will have been materially benefited and enabled to occupy a better position than when they entered the institution. The advantages of this system are apparent.

At this time we deem it proper to make a reference to a subject which is causing considerable comment in the outside world, namely: "The Elimination of Contract Labor." It is our opinion, after careful consideration, coupled with our wide experience on this subject, that any change in this direction should be very carefully weighed, especially in cases of long-term prisoners. We feel qualified to say that the health of all prisoners is considerably better when at work than when confined in idleness. We do not doubt that the present agitation on the subject of abolishing contract labor has been due to the severe tasks imposed upon prisoners in certain penal institutions where investigations were made; the task being so severe in many cases that the health of the prisoner has been impaired rather than benefited. In this connection, we desire to state that the method adopted at the Baltimore City Jail is of the contrary effect. We have made a study of the welfare of the prisoner, not the contractor, before the task now in vogue for the various prisoners was adopted.

After considerable thought, during which time various experiments were made by us, the task of the prisoner has been reduced to such an extent that he or she is not only able to perform the imposed task without any difficulty, but is also able, if the prisoner desires, to make an extra task for his or her own benefit. The prisoner receives from the Jail authorities twenty-five per cent. of the amount received by the Board for the prisoner's daily task, provided he or she is of good behavior and does not violate the rules of the institution. This bonus, in addition to the extra task or tasks which the prisoner is now enabled to earn for his or her own self, creates a spirit of ambition and induces them to work more earnestly, so that they may feel that they are not merely performing a task in a penal institution, but are once more wage-earners and receiving a fair compensation for the work they perform. This innovation also adds to the good discipline of the institution and can not but help to improve the general well-being of the inmates. We sincerely trust that the General Assembly will not abolish contract labor at the City Jail until they give the institution something in its stead which will keep the inmates properly and satisfactorily employed.

In conclusion, it is our desire to express our deep appreciation of the splendid work which has been done by Warden Lee and all of his assistants.

Respectfully submitted,

Moses N. Frank, *President*,
James A. McQuade, *Secretary*,
Frederick W. Eckles,
John T. Ford,
John T. Radford,
Charles A. Irwin,
George M. Henderson,
Henry P. Hoffman,
John R. Fisher,
Board of Visitors.

WARDEN'S ANNUAL REPORT

FOR THE

YEAR ENDING DECEMBER 31, 1913.

BALTIMORE, January 1, 1914.

To the Honorable Board of Visitors to the City Jail.

GENTLEMEN:

Conforming to custom and in accordance with law, I herewith submit for your consideration and approval my second annual report of the operations of the Baltimore City Jail for the year ending December 31, 1913. The work as mapped out in the beginning of our stewardship has progressed rapidly and effectively, and a most satisfactory condition exists at this time throughout the institution.

POPULATION.

The year 1913 has been a record breaking one as to the total number of prisoners committed and released. During the year there were 10,079 prisoners committed and 10,057 released. The daily average for 1913 was 571 as against 481 for 1912. I am pleased to report that notwithstanding this increased number of prisoners to care for, and also laboring under the increased cost of living, we have met all our expenses and kept within our appropriations.

DISCIPLINE.

The discipline throughout the year has been excellent. This is indeed gratifying when we stop to consider that the greater number of our inmates are serving small sentences, in lieu of a fine, with no time allowance for good behavior, and how perplexing it is at times to decide what punishment to inflict on this class for slight, but willful, infraction of the rules. It has not been necessary to resort to punishment, except in rare instances, as I have found that a reprimand is, in most cases, sufficient to cause the offenders to obey the rules. I am firm in my belief that the majority of men in prisons today, if given proper treatment and right management, would show their appreciation by rendering in return the best service in them. I attribute whatever success I have had by following this rule in my dealing with the men and women in my care.

BUTTON SHOP.

The employment in prisons of inmates is a very important problem and one closely allied with its successful management. Many theories along this line have been advanced. I believe this problem has been successfully solved, in so far as the Baltimore City Jail is concerned, in the induction of the industry of making pearl buttons. This is a well-organized and equipped industry, easily learned and managed with the view of securing the highest possible efficiency among the inmates. The tasks are so arranged that every one employed, if they so desire, can make a creditable sum of money for themselves in overtime work. As our shop is operated upon a co-operative plan, this overtime, in conjunction with the twenty-five per cent. of what the Board receives for his task, makes the earning capacity of the prisoner amount to from eight to fifteen dollars per month. The duties in this shop are light and are not attendant with danger of injury.

FILTERS.

In line with the progressive policy adopted by your Honorable Body, two double-cylinder "Loomis" improved water filters were installed in the Jail in August of this year—one to supply the male department and one to supply the female department. These filters were not purchased as a luxury, but as a necessity, and the benefits obtained from a standpoint of comfort and safety to the inmates are manifold.

IMPROVEMENTS.

During the year the Jail proper and the Warden's residence have been connected up with the new sewerage and storm-water system.

A new hog pump has been installed in the boiler-room and the old one rehabilitated. This enables us to always have one in reserve.

A new cable has been put in the elevator in the main hall.

Renewed the piping in the hot-water line from boiler-room to the women's building, also renewed piping in the hot and cold water line to the bakery.

Added nineteen additional lights in the chapel, also thirty additional lights in the basement of Section 2 (now in use as schoolroom).

Removed the small fountain in front of the women's building and replaced the old brick with a concrete pavement. This fountain was added to the fountain in the front yard (north) and contributes no little to its beauty.

Removed the old wooden coping from south wall in back yard and replaced same with brick.

These improvements were made possible by the hearty co-operation of the Building Inspector, Mr. Clarence E. Stubbs, who also furnished us throughout the year with paints, oils, cement, firebrick, etc.

At our solicitation, and with the co-operation of his Honor, the Mayor, the Paving Commission, the City Engineer and the City Forester the approach to the Jail has been improved with modern up-to-date pavements. Buren street, from Madison street to Eager street, has been laid with vitrified brick;

the sidewalk has been parked and the old brick pavement replaced with one of cement. We have continued the cement pavement from entrance in front yard to the administration building.

The lawns in the front and back yards have received special attention during the year.

PRISON CONGRESS.

It was my pleasure, in company with Mr. James A. McQuade, a member of the Board of Visitors, to attend the sessions of the Prison Congress, held at Indianapolis, Ind., October 11-16 of this year. The proceedings were of a most interesting and instructive character and afforded me another opportunity to discuss and exchange with interested persons ideas relative to criminal laws and modern methods of governing prisons, as well as an opportunity to visit quite a number of prisons in the Middle West. It is gratifying to me to report that our institution compares favorably with the best of them.

SCHOOLS.

The Baltimore City Jail has always taken a high rank as a punitive establishment. Its inmates always pay the penalties of their transgressions against the State according to the court's decree. Firm discipline prevails and the prisoners realize their responsibility to the prison regulations. It can be claimed with justice that the dignity of the law is scrupulously upheld, but the discipline has never been harsh. Each inmate, no matter how serious his offence, receives humane treatment and sympathetic attention. In other words, the prison serves its purpose as a punitive establishment with firmness and moderation.

For some time the Board has been of the opinion that the Jail has other functions than those of mere punishment. The prisoner doubtless ought to pay the penalty of his crime, but the State has duties toward itself and toward the prisoner during his incarceration. It is not enough that he be given wholesome food and proper shelter, nor that he be made to labor and repay the State part of the costs of his trial and detention. When he leaves the prison he should be a better and more efficient man. He should have acquired at the Jail training and information which he lacked before. His moral, intellectual and physical powers should be developed.

To this end the Board of Visitors have established a night school for the long-term male prisoners and a day school for the female prisoners.

In securing the services of Mr. Charles J. Koch, Assistant Superintendent of Public Schools in Baltimore, in starting and conducting the work in the male school, assisted by Messrs. M. A. Clemens, J. O. Martin and A. E. Williams of the Educational Department of the Young Men's Christian Association, we have indeed been most fortunate. These gentlemen are giving their time and labor gratuitously. The female school has been placed in charge of Miss Jeannette Campbell, with an assistant, Miss Miriam Bauer—both teachers in the schools of Baltimore

A report of Mr. Koch and Miss Campbell, as to their respective schools, is herewith appended:

REPORT OF MR. KOCH.

Mr. Bernard J. Lee, *Warden*.

Dear Sir—The first session of the male school was held on Tuesday, December 16, 1913, and about one hundred prisoners of Section 2 attended.

A preliminary survey showed that at least four grades would be necessary, and the prisoners have been thus graded. There will probably be more divisions later. As far as possible, the work is made to grow directly out of the needs of each prisoner. This not only vitalizes the instruction, but serves the best utilitarian purpose. The extreme earnestness which is manifested in the work gives the best assurance of success. The range of studies is extensive—from the first ments of English and arithmetic to history, higher English and mathematics.

Civics and general history are deemed of such importance that a half hour is allotted to those studies at each session. The prisoners seem to enjoy these lessons. They are especially interested in the stories of great lives. Without preaching to them, the instructor tries to influence them for good by showing what great deeds have been accomplished by men as frail and as humane as many of them.

Every session closes with singing. This, too, excites great interest and the prison corridors resound with hopeful strains. If the same sentiments which prevail at closing could be made permanent, no prisoner would return to prison after his release. That this happy state may be brought nearer to realization is the fond hope of the teachers and Board.

Respectfully submitted,

CHARLES J. KOCH.

REPORT OF MISS CAMPBELL.

MR. BERNARD J. LEE, *Warden.*

DEAR SIR—The school in the female department began on October 4, 1913. At that time there were eighty-nine women in the Jail; sixty-three attended the first session. The greatest number were of the class known as "long time girls."

There were two grades established—the beginners' and the advanced class. The beginners' class was composed of "long time girls" who could neither read nor write, who had no knowledge of the alphabet nor any idea of counting.

The first lessons given were to form the letters and recognize them alone and in words. Any "girl" can now write the entire alphabet, join the letters to make a word and form simple sentences. There are but two "girls" who now have difficulty in reading at sight simple stories.

The rhythmic method is used in teaching arithmetic. Spelling is taught by the flash method. The writing is exceptional. When the school started the "girls" were accustomed to designate themselves by cross-marks; after three lessons one "girl" signed her name. The progress made by these "girls" is not only creditable, but wonderful. The average attendance in this class is twenty-one.

The advanced class is composed of "girls" of three divisions—the long time, short time and court "girls." Their previous education varies greatly, but all have had some schooling. The studies given in this class are language, spelling, arithmetic, reading, writing and physiology, emphasizing the first three. The progress of this class is best seen in the letters which they now write, in their conversation, their penmanship and spelling. The average attendance of this class is eighteen.

The "girls" are greatly interested in their work and I feel, from the words of many who have been released, that the school is most beneficial.

Respectfully,

JEANNETTE CAMPBELL.

RELIGIOUS SERVICES.

As in the past, the religious services during the year have been ably looked after by the Prisoners' Aid Association. All denominations are represented in this work. Your attention is especially called to the most interesting report of this Association, which is attached hereto, showing the varied character, as well as remarkable work, accomplished during the year.

The Rev. Father Coppens, of Loyola College, has looked after the spiritual welfare of our Catholic inmates unremittingly and cheerfully responds to calls day or night.

The good sisters of the Sacred Heart Convent visit the women's department every Sunday and conduct services.

Rabbi L. M. Palitz has been untiring in attending to the services of our Hebrew population on Saturday afternoons.

CONCLUSION.

In concluding this report I desire to thank the President and Board of Visitors for their confidence and their help in solving the many vexatious problems attendant upon the management of this institution and would state that, to the best of my ability, the wishes of the Visitors, as expressed from time to time, together with the routine duties of the Warden for the coming year, will be executed to the best of my ability, with the sole aim of keeping this institution at its high state of efficiency.

I also take pleasure in acknowledging the valuable assistance rendered by the Deputy Warden, Mr. Guy L. Upperco; Dr. George L. Wilkins, the Jail physician; Mr. Harry C. Martin, the clerk; the keepers and matrons, who have been constant in their endeavor to discharge the duties of their respective positions.

Respectfully submitted,

BERNARD J. LEE,
Warden.

EXHIBITS

EXHIBIT A.

A summary of the appropriations for the twelve months ending December 31st, 1913. Also a summary of the revenues of the Jail and their dispositions, and a comparative statement for the years 1913, 1912, 1911 and 1910.

APPROPRIATIONS.		EXPENDITURES.	
Salaries	$36,050 00	Salaries.	$36,020 80
		Balance unexpended to surplus credit	29 20
	$36,050 00		$36,050 00
Expense	$27,500 00	General subsistence	$18,014 21
		Heating and lighting	1,069 53
		Machinery and supplies	1,492 18
		Clothing, drygoods, etc	2,168 23
		Sanitary	1,576 20
		Hospital drugs	770 95
		Hospital subsistence	275 83
		Incidental expenses	1,132 87
		Warden's subsistence	1,000 00
	$27,500 00		$27,500 00

EXHIBIT A—*Continued.* Revenues.

Amount paid to City Comptroller's account Jail revenue		$7,314 14	Outstanding accounts January 1, 1913	$2,536 22
Prisoners' shop earnings		4,136 65		
Outstanding Accounts:			Earnings During the Year:	
Maryland Button Co.	$1,099 32		Maryland Button Co.	7,975 72
U. S. Marshal	273 60		U. S. Marshal	1,414 40
U. S. Commissioner of Immigration	35 50		U. S. Commissioner of Immigration	62 00
U. S. Revenue Service	11 50		U. S. Revenue Service	82 70
Dorchester County	53 50		Board, county prisoners	674 50
Frederick County	27 50		Miscellaneous, junk, etc.	205 67
		1,500 42		
		$12,951 21		$12,951 21

In addition to the revenues from the Maryland Button Co., viz: $7,975.72, the said Company furnished the following amounts of bituminous coal:

2550 tons costing	$8,681 28

PHYSICIAN'S REPORT

Baltimore, January 1, 1914.

To the Honorable Board of Visitors to the City Jail.

Gentlemen:

I have the honor to submit the report of the medical department of the Jail for the fiscal year ending December 31, 1913, with a tabulated statement and summary of the work of the department.

The total number of cases treated during the year was *13,807, the total number of prescriptions was 13,791 and the total number of special diets was 7,075.

There were ten deaths during the year, or a death rate of .72 per 1,000 cases treated. Excluding two deaths by hanging and one death by accident, the death rate would be .51 per 1,000 cases treated. The causes of death were as follows: Bright's disease, 3; pneumonia, 2; strangulation by hanging, 2; accident, 1; cellulitis, 1; endocarditis, 1. Three of the cases were complicated with delirium tremens. Six of the deceased were ill when admitted to the Jail—two dying one day after admission; one, two days after; one, three days after; one, fifteen days after; and one, twenty-five days after. The proper place for such cases would be a hospital and not a jail.

During the year there were 1,140 cases of alcoholism and 62 of delirium tremens. In this connection I will quote from a former report: "The laws relating to chronic drunkards should be radically changed. The present laws neither benefit the State nor the individual. They utterly fail in their purpose. The same individual returns to the Jail over and over again on the charge of drunkenness. If he recovers from the immediate effect of his alcoholism, he goes out with the desire for drink just as strong as ever. To cure drunkenness, the individual should be separated from the opportunity to gratify his morbid desire long enough to take away his appetite for drink and reform him mentally and physically. To accomplish this it will require a period ranging from one to three years." To this end, the law should make repeated and habitual drunkenness a penal offence, punishable with a prison term of from one to three years with hard labor, the proceeds of his labor to go to his family.

---

*The same person is, during the year, treated a number of times for the same complaint, hence the large total of cases treated.

There were 13 drug habits during the year, all of whom recovered.

The records show 16 cases of pulmonary tuberculosis, 28 glandular, 1 intestinal and 1 of the testicle. There were no deaths from this disease, except a case of tubercular pneumonia.

Forty-seven insane prisoners were admitted. The Jail is not the proper place for the insane, but our comments in the past have been sufficiently emphatic on this point.

It is most earnestly hoped in the interest of the Jail administration that, during the present session of the Legislature, Section 144 of the City Charter will be so amended as to facilitate the transfer to an insane asylum of the insane sentenced to the Jail for short periods on minor offenses. The present laws, both local and State, fail in their purpose.

During the year there were one case of measles and two cases of diphtheria, but by prompt isolation the diseases were limited to the original cases.

Because of the appearance of smallpox in certain sections of the city, beginning in the fall of 1912 and continuing until the spring of 1913, we made a general vaccination of the inmates of the Jail. There was a total of 2,262 vaccinations, and of this number 1,508 were successful and 754 failed.

I wish to express my thanks to the Health Department for their liberal supply of virus for this work.

Thanking the Board of Visitors, the Warden and other officers of the Jail for their constant co-operation, I respectfully submit this report.

George L. Wilkins,
Physician to the City Jail.

REPORT OF THE PRISONERS' AID ASSOCIATION

BALTIMORE, January 1, 1914.

To the Honorable Board of Visitors to the Baltimore City Jail.

GENTLEMEN:

Herewith we hand you report of the work of the Prisoners' Aid Association of Maryland for year ending December 31, 1913.

On January 1, 1913, our records showed 501 probationers in our care; during the year 850 probationers were granted to us by the judges of the Criminal Courts, making a total of 1,351 probationers in our care for the year ending January 1, 1914 (960 white males, 28 white females, 332 colored males, 31 colored females). The terms of 336 expired and 24 violated their probation conditions and were incarcerated for said violation, leaving a total of 991 probationers at the present time in the Association's care. The reported earnings of our probationers for the year ending January 1, 1914, were $310,782.59.

We interviewed in Baltimore City Jail 2,146 persons in connection with our probation work, taking biographical statements of 663. Six hundred and seventeen cases that we investigated in this way have come before the Criminal Court during the year. During the year we received into our "Home":

Discharged prisoners from Baltimore City Jail	73
Discharged prisoners from Maryland House of Correction	180
Discharged prisoners from Maryland Penitentiary	27
Discharged prisoners from Towson Jail and Federal Prison	19
Probationers	12
Total persons admitted to the "Home"	311

Interviewed in Baltimore City Jail for employment	154
Interviewed in Maryland Penitentiary for employment and investigation	194
Interviewed probationers at "Home" for employment	175
Interviewed firms for employment	115
Employment secured for	110
Number of men now awaiting employment in "Home"	12
Number of men now in "Home"	17
Board and lodging received from beneficiaries of "Home"	$763.05
Families of prisoners visited	38
Miscellaneous visits for prisoners	147
Underwear, clothing, etc., furnished to	276
Eyeglasses furnished to prisoners	52
Meals furnished to beneficiaries	16,084
Lodgings furnished to beneficiaries	4,934
Persons placed in hospitals	7

Number of men leaving the "Home" rehabilitated, 145, as against 124 last year. We know from personal knowledge that these men have returned to their homes or have found employment in the city and have become law-abiding citizens.

Regarding the religious work, services were held Sunday mornings and afternoons at the Baltimore City Jail and in the afternoons at Towson Jail and Maryland House of Correction. These services were conducted by ministers and laymen from all denominations.

We distributed tracts and Bibles as follows:

	Tracts.	Bibles.
Baltimore City Jail	24,346	495
Maryland House of Correction	20,675	855
Towson Jail	1,875	170

Religious interviews with prisoners:

Baltimore City Jail	175
Maryland House of Correction	30
Towson Jail	37
Maryland Penitentiary	13

In conjunction with the Warden, a new departure was made during the year in the character of entertainments given to prisoners; these included moving pictures and band concerts.

Our records show the following charges for actual relief to beneficiaries for the year ending January 1, 1914:

Provisions	$1,408 19
Rent and outside lodgings	555 25
Transportation furnished to discharged prisoners	3 35
Clothing purchased	49 14
Sundry aid and relief	28 91
Sundry expenses in connection with the "Home"	659 11
Lectures, etc., in connection with religious work	115 60

Amount of non-support and embezzlement money collected and paid for the court during the year, $37,226.93 (as against $17,754.55 last year).

We congratulate the Board, the Warden and his assistants upon the work of the year, showing as it does that they are fully abreast of all the best of the new movements looking to the reformation and restoration to true manhood of the unfortunates under their care—many being in that position more through heredity and environment than from any innate viciousness of their own. Our own work along these lines has met in all instances with their most hearty co-operation.

Respectfully submitted,

CHARLES D. REID, *Executive Secretary,*
The Prisoners' Aid Association of Maryland.

CITY REGISTER'S REPORT

BALTIMORE, December 31, 1913.

To the Honorable Members of the
First and Second Branches of the City Council.

GENTLEMEN:

Complying with the provisions of the Baltimore City Code of 1893 (Article 11, Section 24), I have the honor to lay before you the following report:

The receipts into the treasury from all sources during the current fiscal year, ended December 31, 1913, as detailed in Statement "C" of this report, were........	$23,378,116 70
To which add the cash balance of December 31, 1912...	2,641,771 52
Making the total amount to be accounted for..........	$26,019,888 22
The total disbursements for the year, as detailed in Statement "C," were..................................	24,381,195 65
Leaving a cash balance on hand, December 31, 1913, of..	$1,638,692 57

FUNDED DEBT ACCOUNT

Net credit balance December 31, 1912	$1,578,932 04	
Net proceeds from sales of stock during the year	7,447,198 16	
Special paving tax	62,317 76	
		$9,088,447 96
Expenditures during year, as shown by Statement "C"		8,427,341 00
Credit balance December 31, 1912		$661,106 96

Funded debt:

The funded debt December 31, 1913, is	$78,917,679 50	
The funded debt December 31, 1912, was	71,294,382 95	
Showing an increase during the year of		$7,623,296 55

Thus explained:

Paving 4% 1951 Loan issued	$1,000,000 00	
Annex Improvement 4% 1951 Loan issued	325,000 00	
Water 4% 1958 Loan issued	1,500,000 00	
Jones Falls Improvement 4% 1961 Loan issued	400,000 00	
School House 4% 1961 Loan issued	80,000 00	
Dock Improvement 4% 1961 Loan issued	170,000 00	
New Sewerage Improvement 4% 1961 Loan issued	3,975,000 00	
Conduit 4% 1962 Loan issued	375,000 00	
General Fund Bonds ¼% issued	300,000 00	
		$8,125,000 00
Less $1,703.45 Five Million 6% 1890 Loan redeemed	$1,703 45	
Less $500,000 Water 4% 1922 Loan redeemed before maturity	500,000 00	
		501,703 45
		$7,623,296 55

FORM OF THE FUNDED DEBT

In my last annual report I referred to the form of obligation which the city has heretofore issued for its funded debt, namely, a registered stock with interest payable by check, and each loan payable in its entirety at some future date, and each requiring an annual sinking fund accumulation for its redemption. The principal object in adhering to a registered certificate has been to avoid the unnecessary payment of the State tax on that part of the city debt held outside of the State.

I pointed out that the remedy should come from legislation, and advocated the abolition of all taxes within the State, on its public debt, or on the public debt of any of its political subdivisions.

Since then, a bill abolishing all such taxes on all such obligations to be hereafter issued, and on all such obligations heretofore issued, upon which the city, county or political subdivision is obligated to pay the State tax on behalf of the holder, has been passed by the Legislature and has become a law. With this relief, I would recommend that the present form of city stock be discontinued in future loans, and that the latter be issued in the form of serial bonds with coupons attached for interest, registerable as to principal only, and only registered upon request. I would further recommend that both bonds and coupons be made payable in English as well as American money at a fixed normal parity, that such be denominated on the face of both bond and coupon, and that all be made payable in gold.

Bonds issued in the form and with the provisions just described would have a much broader market, and would command the highest market price obtainable for such securities, either at home or abroad. Fiscal agents should be appointed if the design is to be effectual.

Serial loans under which a yearly portion of the principal is repaid are usually issued in as many series as the debt has years to run, each year's series containing an equal part of the principal of the loan. This plan has, perhaps because of its simplicity, become usual, but under it the varying interest payments make the total yearly cost (principal and interest), during the early years, before the principal is much reduced, very much larger than the latter years, when the principal is nearly all repaid.

I would recommend, as being more scientific and better financing, a plan under which the total yearly cost would be uniform, but as interest payments must necessarily be larger at first than at last, the desired uniformity must be had by grading the annual payments on account of principal.

The total cost for each of the years cannot be made precisely uniform, because of the even denomination of the bonds, or because it is desirable to have even amounts in the different yearly series, but it can be made as nearly so as the denomination of the bonds or the even amounts in the series will permit, and at most the variation in the total cost for the different years can be made so small as to be unimportant.

This plan can be adapted to a loan, no matter whether issued in whole or in portions, and whether its repayment commences at once or is deferred. Variations of this plan have been comprehensively illustrated in a pamphlet published in 1905 by Mr. Robert M. Rother, comparing partial payments with sinking funds.

Under the old sinking fund plan the disadvantages are numerous and many of them are unavoidable, but it is manifest that no effort to hoard funds to pay a debt could hope to be as successful as the partial payment of the debt at the time the funds available for such redemption are acquired.

In years gone by, we have had the experience of having some of our sinking funds neglected, and in the instance of Water 1916 Loan, shortly to mature, we will be confronted with a deficit of nearly 30 per cent., due to such neglect. This, however, is the only one of those sinking funds which will be short at maturity, the others that were neglected having been replenished.

In connection with the Water 1916 Loan, to which I have referred, I would recommend that all the holders be offered the privilege of continuing the investment, for a term or ten years, on a somewhat lower percentage basis than the 5 per cent. which the loan now pays. It is probable that such an option would be accepted by more than the amount of stock left unprovided for by the sinking fund. If the rate of interest were made somewhat better than the market rate, the extension would probably be in demand, in which event only the exact amount, which the city might find it desirable to extend, need be offered, with the understanding that it would be granted to those first applying. Under this plan the annual contribution for interest and sinking fund for the ensuing ten years would be approximately $125,000 less than at present. If, however, the city should find it necessary to exercise its right of continuing the entire loan, the sinking fund, continued as heretofore, would be sufficient to redeem it in five years.

The sale of city stock, which took place direct to the public over the counter of this Department during the year, and which is more fully described in the report of the Commissioners of Finance of this year, has attracted wide attention, and has apparently given rise to a growing opinion that this method of disposing of municipal securities is preferable to any other.

Communications from many sources indicate that this city is regarded as having adopted this plan. We have had other sales "over the counter" in past years (I believe the plan of selling "over the counter" was originated by the Commissioners of Finance of Baltimore in 1907), and while it has several times been employed, it has not in any other sense been adopted.

There were many features to be considered in the sale of last June, and it is my belief that our experience does not warrant our selling our stock in this way exclusively, but indeed, only when the existing circumstances make it clearly advisable. When there is real and sufficient competition in the bidding, especially when the offering is large, there are many advantages in disposing of the entire amount to the highest bidder, and under normal and proper conditions it would probably be more economical. The factors and circumstances entering into these sales are so varying at different times as to make impractical any standard method of selling.

The statements herewith submitted for your information are as follows:

"A"—An analysis of the funded debt.

Supplement—Showing sources from which interest and sinking funds are derived.

"B"—Statement of the financial condition.

"C"—A statement in detail of the receipts and expenditures for the fiscal year, with the appropriations for the various accounts.

"D"—A statement of the fund held by the City Register in trust for property sold for taxes.

"E"—A statement of the fund held by the City Register in trust for unclaimed damages for opening streets.

Respectfully submitted,

RICHARD GWINN,
City Register.

SUPPLEMENT—STATEMENT A.

TABULATION OF LOANS OUTSTANDING, JANUARY 1, 1914, SHOWING SOURCES FROM WHICH INTEREST AND SINKING FUNDS ARE DERIVED

NAME OF LOAN	Interest Rate, Per Cent.	Date	Term	Maturity of Loan.	Amount of Loan.	Amount Issued	Sinking Fund Tax Rate.	Interest, 1913,		Basis of Sinking Fund, Per Cent.	Paid by Tax Levy.	Paid by Water Board.	Paid by Park Board.	Paid by Certificates of Deposit

STATEMENT B.

Funded Debt, Productive and Unproductive Assets.

Total funded debt December 31, 1913		$78,917,679 50
Temporary loan from national banks on the several promissory notes of the Mayor and City Council in anticipation of receipts from taxes	$500,000 00	
Accrued interest to December 31, 1913, at 4½%	250 00	
Accrued interest to December 31, 1913, at 5%	375 00	
		500,625 00
		$79,418,304 50

Against which the city holds the following productive assets:

Sinking funds, face value	$26,036,750 17	
Water works stock outstanding	11,100,000 00	
Electrical conduit system	3,375,000 00	
New docks and piers	6,105,000 00	
550 shares Baltimore and Reisterstown Turnpike stock (dividend paying)	412 50	
		46,617,162 67
Excess of funded debt over productive assets		$32,801,141 83

UNPRODUCTIVE ASSETS.

10,000 shares Valley Railroad of Virginia stock	
625 shares Baltimore and York Turnpike stock	
New Court House, cost	$2,750,000 00
City Hall, cost	2,250,000 00
Market and school houses, jail, police stations, engine houses, iceboats, Quarantine Station, parks and squares	15 000,000 00
	$20,000,000 00

Of the total funded debt amounting to		$78,917,679 50
Interest is provided as follows:		
On Water 5% 1916 Loan, paid from water rents	$5,000,000 00	
On Water 4% 1926 Loan, paid from water rents	1,000,000 00	
On Water 3½% 1943 Loan, paid from water rents	1,000,000 00	
On Four Million 3½% 1945 Loan (issued for extension of water supply), paid from water rents	2,000,000 00	
On Patterson Park 4% 1920 Loan, paid from Park Board receipts	200,000 00	
On Four Million 3½% 1945 Loan (issued for park purposes), paid from Park Board receipts	1,000,000 00	
On W. M. R. R. 3½% 1952 Loan, paid by Commissioners of Finance from special sinking fund	1,000,000 00	
On W. M. R. R. 4% 1925 Loan, paid by Commissioners of Finance from special sinking fund	684,000 00	
On W. M. R. R. 3¼% 1927 Loan, paid by Commissioners of Finance from special sinking fund	1,704,000 00	
On W. M. R. R. 3½% Loan, paid by Commissioners of Finance from special sinking fund	875,000 00	
Amounts carried forward	$14,463,000 00	$78,917,679 50

Amounts brought forward	$14,463,000 00	$78,917,679 50
On Public Park Improvement 4% 1955 Loan, paid from Park Board receipts	1,000,000 00	
Overdue stock, no interest allowed	1,379 50	
		15,464,379 50
Leaving the amount on which interest is provided for by taxation at		$63,453,300 00

REPORT OF THE

COMMISSIONERS OF FINANCE

OF BALTIMORE CITY

FOR THE YEAR 1913

BOARD OF COMMISSIONERS OF FINANCE

PRESIDENT

John M. Littig.

James H. Preston, *Mayor.*
Richard Gwinn, *City Register.*
James F. Thrift, *Comptroller.*
Harry Fahnestock.

CLERK

Isaac L. Newman, *Deputy City Register*

REPORT

Department of Finance,
Sub-Department, Commissioners of Finance,
City Hall,
Baltimore, December 31, 1913.

To the Honorable the Members of the First and
Second Branches of the City Council of Baltimore.

Gentlemen—In compliance with Section 16, Article 47, of the Baltimore City Code of 1893, the Commissioners of Finance have the honor to submit herewith their report showing in detail their transactions during the current year, by the following statements:

1. Receipts and payments on account of the various sinking funds (page 78).
2. The purchases of stock for the sinking funds (page 95).
3. The condition of the various sinking funds (page 108).
4. The condition of the Enoch Pratt Free Library Fund (page 126).
5. The condition of the Horwitz Benevolent Fund (page 127).
6. The condition of the Frederick Raine Fund (page 128).
7. A schedule of real estate from which ground rents are derived (page 128).
8. Cash balances of sinking funds (page 131).
9. A statement of the funded debt (page 132).
10. A statement of the issues of Baltimore City Stock held by the Commissioners of Finance in the sinking and special funds (facing page 134).

The matters embraced in the foregoing are exhibited under their respective heads in detailed form in the appendix to this report.

1.—Receipts and Payments

The receipts were as follows:

Cash to credit of Sinking and Special Funds, December 31, 1912		$16,231 57
Interest on stock and investments		907,512 92

		2,210,665 88
Balance to credit of Sinking and Special Funds, December 31, 1913		$37,241 74

2.—Purchases of Stock.

This statement is submitted in obedience to Section 13, Article 47, Baltimore City Code (1893), and exhibits in detail the purchases of stock during the current year amounting to $1,575,100, at a cost of $1,508,555.78.

3.—The Sinking Funds.

This statement shows the condition of the various sinking funds, at their face value, set apart for the redemption of the public debt. They are held in trust by the Commissioners of Finance, and amount to $26,036,750.17.

4.—Enoch Pratt Free Library Fund.

This statement shows the condition of the Enoch Pratt Free Library Fund, under the control of the Commissioners of Finance, who were required "to invest the interest upon the investments in the sinking fund, and the interest upon the interest, as the same shall be received, in the public debt of the City of Baltimore, until the annual income from said investment shall reach the sum of fifty thousand dollars." In the meantime the Mayor and City Council were required to pay the annuity by tax levy. In 1892 the taxation for this purpose ceased, for the reason that the income from investments contained in the fund yielded $50,341.

By the redemption of the 5 and 6 per cent. loans in the fund, from 1893 to the year 1902, and the reinvestment in stock bearing 3½ per cent. interest on the amounts received therefrom, the income has been reduced to $45,742; consequently, it is necessary for the Mayor and City Council to supply, by taxation, the annual deficiency of $4,258.

5.—The Horwitz Benevolent Fund.

This statement shows the condition of the Horwitz Benevolent Fund, under the management of the Commissioners of Finance, who, on December 28, 1888, under authority of Resolution No. 7, of 1888, accepted from the executors of Orville Horwitz, deceased, the sum of ten thousand ($10,000) dollars which is held in trust as directed under the following provision of the last will and testament of the said deceased:

"Article 7. I give and bequeath unto the Mayor and City Council of Baltimore the sum of ten thousand dollars to be invested in permanent securities in the City of Baltimore, and as soon as the said sum by investments and re-investments of the rents, issues and profits thereof, shall have been increased to the sum of twenty thousand dollars, then I will and desire that the said rents, issues and profits shall be annually distributed under the direction of the Mayor of said corporation, in aid of the support of twelve poor families of said City of Baltimore, to be selected by said Mayor without distinction of race, color, religion or politics in such proportions and sums as to the said Mayor may seem just; the said Mayor to report annually in his message to the City Council of said city the mode in which the said annual income has been distributed and the amounts in which and persons to whom the same has been paid and the reasons which have induced him to make such distribution. It is hoped that this bequest will be faithfully administered, and the money will not be wasted amongst political idlers or bummers, as they are called, but will be so applied as to relieve the actual distress of worthy persons, and induce others to follow my example. The fund shall be known as the Horwitz Benevolent Fund."

This fund now contains $20,000 of various issues of Baltimore City stock, the result of investing the annual income from the original investment of $10,000 in city stock in 1888 under the provisions of the testator's will. The annual income of this fund is distributed by the Mayor, according to the terms and conditions of said will.

6.—The Frederick Raine Fund.

This statement shows the condition of the Frederick Raine Fund, under the control of the Commissioners of Finance, who, on November 6, 1897, under authority of Resolution No. 51, of 1897, accepted from the executors of the estate of Frederick Raine, deceased, four hundred dollars (and accrued interest amounting to eighteen dollars and seventy cents), which amount has been invested in city stock; "the interest on two hundred dollars thereof to be annually expended for a medal, to be known as the 'Frederick Raine Medal,' and to be presented to the student in Baltimore City College who shall be adjudged, by the methods of determining merit practiced in said college, to be most proficient in the study of the German language and German literature," and "the interest on two hundred dollars thereof to be annually expended for a medal, known as the 'Frederick Raine Medal,' and to be presented to the student in the Maryland Institute for the promotion of the Mechanics Arts who shall be adjudged, by the methods of determining merit practiced in said institute, to be most proficient in mechanical drawing," according to the terms of the last will and testament of said Frederick Raine, deceased.

7.—Western Maryland Railroad Company.

A sale of the city's interest in the Western Maryland Railroad Company was made on June 27, 1902, to the Fuller Syndicate, for the sum of $8,751,370.45 *cash*, and the securities and cash contained in the following sinking funds, belonging to the Western Maryland Railroad

Company and held in trust by the Commissioners of Finance for the said Western Maryland Railroad Company, viz.: The Hillen Station Sinking Fund, amounting to $87,959.57, which was set apart for the redemption of the ground rent on Hillen Station property; The Western Maryland Railroad Terminal Company Sinking Fund, amounting to $35,187.85, which was set apart for the redemption of the ground rent on the Western Maryland Railroad Terminal Company depot property; also the Western Maryland Railroad 1927 Loan Sinking Fund, amounting to $162,662.29, which was set apart for the redemption of the Western Maryland Railroad 3¼ per cent. 1927 Loan. This last-named amount of $162,662.29, with the addition of $4,263,000, plus $65,909.71, making a total of $4,328,909.71, was placed in a sinking fund, to be called the "Western Maryland Railroad Sinking Fund," for the redemption at maturity of the Western Maryland Railroad 4 per cent. 1925 Loan, amounting to $684,000; the Western Maryland Railroad 3¼ per cent. 1927 Loan, amounting to $1,704,000; the Western Maryland Railroad 3½ per cent. 1950 Loan, amounting to $875,000, and the Western Maryland Railroad 3½ per cent. 1952 Loan, amounting to $1,000,000. Total, $4,263,000.

The investment of $4,263,000 of above amount of $4,328,909.71 is secured by certificates of deposit, with a like amount of city stock as collateral. The balance has been paid and invested in city stock.

The interest on the investment of said fund is to be applied to the payment of the annual interest on the outstanding loans mentioned. The addition to the special fund of $4,263,000 of the amount contained in the Western Maryland Railroad 1927 Loan Sinking Fund ($162,622.29), and $65,909.71 from proceeds of the sale was made in order to provide the annual deficiency between the fixed interest charge of $148,365 per annum on above outstanding loans and the interest to be derived from the investment of $4,263,000 in said sinking fund at 3¼ per cent., amounting to $138,547.50 annually.

8.—REAL ESTATE AND GROUND RENTS.

The schedule of real estate and ground rents, presented in this form for convenience of reference, embraces only so much of the city property as is in control and shown upon the books of the Commissioners of Finance, and from which income is derived from rentals.

The income derived from public wharves, turnpike stock and market houses being applied to current expenses of the Mayor and City Council, does not appear in these statements. (Section 15, Article 47, City Code, 1893.)

9.—CASH BALANCES OF SINKING AND SPECIAL FUNDS.

This statement shows the cash balances of the Sinking and Special Funds, which aggregated on December 31, 1913, $37,241.74.

The foregoing statement does not embrace any items connected with the current receipts and expenditures, but refers only to the stock obligations of the corporation and to investments specially set apart for the redemption of the same.

The accounts now submitted for your consideration exhibit in detail all the transactions of the Commissioners of Finance for the current fiscal year.

They show the receipts, including a cash balance at the beginning of the year, to have been	$2,747,907 62
And the payments to have been	2,710,665 88
Leaving a balance to the credit of the Sinking and Special Funds, on December 31, 1913, of	$37,241 74

FUNDED DEBT.

The funded debt, December 31, 1913, is	$78,917,679 50	
The funded debt, December 31, 1912, was	71,294,382 95	
Showing an increase during the year of		$7,623,296 55

The following stock having been issued:

Paving 4% 1951 Loan	$1,000 000 00	
Annex Improvement 4% 1951 Loan	325,000 00	
General Fund Bonds ¼ of 1% 1955 Loan	300,000 00	
Water 4% 1958 Loan	1,500,000 00	
Dock Improvement 4% 1961 Loan	170,000 00	
Jones Falls Improvement 4% 1961 Loan	400,000 00	
New Sewerage Improvement 4% 1961 Loan	3,975,000 00	
School House 4% 1961 Loan	80,000 00	
Conduit 4% 1962 Loan	375,000 00	
		8,125,000 00
Less $1,703.45 Five Million 6% 1890 Loan, redeemed	$1,703 45	
Less $500,000 Water 4% 1922 Loan redeemed, prior to maturity	500,000 00	
		501,703 45
		$7,623,296 55

Increment of the Sinking Funds.

The increment of the sinking funds from December 31, 1912, to December 31, 1913, amounting to........			$993,825 38
Was derived thus:			
From interest on city stock and other investments	$907,512 92		
Less portion applicable only to Enoch Pratt Free Library, Horwitz Benevolent and Frederick Raine funds.....	46,498 74		
		$861,014 18	
From rentals of real estate................		32,027 36	
From interest on bank deposits..........		4,375 52	
From Water Board, 1½% of gross receipts.		21,614 43	
From Park Board, annual contribution to Public Park Improvement 1955 Loan Sinking Fund		8,800 00	
From Park Board, 5% of "park tax"......		29,042 29	
From forfeiture of deposit with bid for stock		40 00	
From Mayor and City Council by tax levy:			
City Collector	$633,520 68		
City Comptroller	89,200 00		
		722,720 68	
From discount in the purchases of city stock for sinking funds:			
Par value of the stock.....	$1,575,100 00		
Cost	1,508,555 78		
		66,544 22	
			$1,746,178 68
From which deduct:			
One year's interest on W. M. R. R. 3¼% 1927 Loan............................		$55,380 00	
One's year's interest on W. M. R. R. 3½% 1950 Loan		30,625 00	
Amounts carried forward............		$86,005 00	$1,746,178 68

Amounts brought forward		$86,005 00	$1,746,178 68
One year's interest on W. M. R. R. 3½% 1952 Loan		35,000 00	
One year's interest on W. M. R. R. 4% 1925 Loan		27,360 00	148,365 00
Redemption of Five Million 6% 1890 Loan.		$1,703 45	$1,597,813 68
Extinguishment of Water 1922 Loan Sinking Fund in the redemption of Water 4% 1922 stock:			
Various issues of stock in fund	$601,000 00		
Cash contained in fund	1,284 85	602,284 85	603,988 30
			$993,825 38

The face value of the sinking funds December 31, 1913, is	$26,036,750 17	
The face value of the sinking funds December 31, 1912, was	25,042,924 79	
		$993,825 38

The increased value of the sinking funds is thus explained:

Increment of the sinking funds, as shown in detailed statement		$1,597,813 68
Less amount of Water 1922 Loan Sinking Fund extinguished in the redemption and cancellation of Water 4% 1922 stock, prior to its maturity	$602,284 85	
And redemption of Five Million 6% 1890 Loan, in part	1,703 45	
		603,988 30
		$993,825 38

INCREASE OF FUNDED DEBT AUTHORIZED, BUT NOT YET ISSUED.

Annex Improvement 4% 1951 Loan, Ordinance No. 662, 1911	$1,775,000 00
Conduit 4% 1962 Loan, Ordinance No. 162, 1912	1,625,000 00
Dock Improvement 4% 1961 Loan, Ordinance No. 557, 1910	1,030,000 00
General Fund Bonds, ¼ of 1% 1955 Loan, Ordinance No. 564, 1910	2,100,000 00
Jones Falls Improvement 4% 1961 Loan, Ordinance No. 555, 1910	300,000 00
New Sewerage Improvement 4% 1961 Loan, Ordinance No. 653, 1911	4,025,000 00

BALTIMORE AUDIT COMPANY,
1027-1033 CALVERT BUILDING,

BALTIMORE, March 20, 1914.

To the Honorable Mayor and City Council of Baltimore.

GENTLEMEN—We beg to report that on the 19th instant, in the presence of the Commissioners of Finance, we examined all the certificates of city stock deposited in a vault at the Safe Deposit and Trust Company, held by the Commissioners in trust for the various sinking and special funds, as follows:

City stock on hand, January 1, 1913		$20,207,359 97
Purchase of city stock from time to time during 1913		1,575,100 00
		$21,782,459 97
Less Water 1922 Sinking Fund, sold to Enoch Pratt Free Library Sinking Fund		601,000 00
		$21,181,459 97
Certificates of deposit (city stock as collateral)		4,263,000 00
		$25,444,459 97
Enoch Pratt Free Library Fund, January 1, 1913	$1,174,100 00	
Less Water 1922 5 per cent., sold to Finance Commissioners	500,000 00	
	$674,100 00	
Plus Water 1922 5 per cent., purchased from Finance Commissioners	601,000 00	
		1,275,100 00
Horwitz Benevolent Fund		20,000 00
Frederick Raine Fund		400 00
		$26,739,959 97

We have fully verified by count the foregoing funds.

We have also, by inspection and count, verified the certificates of deposit of the various institutions secured by city stock to the amount of $4,263,000, which represents a part of the Western Maryland Sinking Fund, and have seen that the proper powers of attorney accompany each and every certificate of stock pledged.

We have also verified, by certificates of the depository banks, the cash held by the Commissioners of Finance against the various sinking and special funds, amounting to $37,241.74.

The figures given above are all in accord and agreement with the books as kept in the office of the Commissioners, the detail of which will be fully shown in our report.

We feel that the City of Baltimore is to be congratulated on the splendid condition of its finances, and the able manner in which they are handled by the Commissioners and City Register, under whose immediate supervision they come.

Respectfully submitted,

BALTIMORE AUDIT COMPANY,
CHARLES L. HEHL,
Certified Public Accountant, President.

The principal sale of city stock for financing the public work in progress, took place this year in June. The amount then sold was $5,500,000. This time was selected after mature deliberation and after consultation with leading financiers both here and in New York.

The sale was advertised and the stock offered in the usual way, by sealed proposals, but on account of extremely unfavorable market conditions, which came about more or less suddenly, the bidding was unsatisfactory as to price, and there was but one bid for the entire offering. It was then decided to offer the stock "over the counter" direct to the public at the fixed price of ninety dollars per hundred. This price was based upon the existing condition of the market, and upon the basis on which other cities had, about that time, disposed of their bonds.

The sale was at once begun and there was an eager demand for the stock on the part of the public, due in some degree to extensive advertising, but mainly on account of the attractive price at which it was offered. Similar sales have heretofore been conducted by the city, but none where the amount of stock to be sold was as large as in this instance, and none with such great success.

Owing to the unexpected activity of the departments doing public work, the city's expenditures during the year were larger than had been anticipated by the departments, and it became necessary toward the end of the year to sell some additional stock; accordingly, a public sale by sealed proposals was held on December 1, for the disposal of $1,800,000 of New Sewerage 1961 Loan. The bidding was spirited, and a number proposed to take the entire offering, which was allotted to the highest of these bids at 94.83, and which was nearly eight points higher than the bid for the entire offering in June.

At the time of the sale in June, the Commissioners purchased for the sinking funds at the selling price of ninety $275,000, consisting of $50,000 School House 1961 and $225,000 New Sewerage 1961 Loans. At the time of the December sale, but independent thereof, they purchased $350,000 of Paving 1951 Loan and $175,000 New Sewerage 1961 Loan at the same price at which the New Sewerage 1961 Loan had been allotted, namely, 94.83. These purchases, with $300,000 General Fund Bonds One-Quarter per Cent. 1955 Loan, purchased early in the year at par, made $1,100,000 purchased from the Mayor and City Council during the year for the sinking funds. In addition, there was purchased in the open market $475,100, making in all $1,575,100 purchased for the sinking funds throughout the year.

During the year the Commissioners considered jointly with the Board of Estimates the recommendations of the City Register for the cancellation of Water 1922 Loan. Among the securities in the Enoch Pratt Free Library Fund was $500,000 of the Water 1922 Loan, which amount constituted the entire issue. The sinking fund already accumulated amounted to more than the face of the loan, and it was recommended that the repayment of the loan be anticipated by the selling of its sinking fund to the Enoch Pratt Free Library Fund for $500,000 and the amount applied to the redemption of the loan. Under resolutions of the Board of Estimates and the Commissioners of Finance this was done at the close of the year, thereby eliminating this loan and saving the city the unnecessary contributions of interest and sinking fund for the ensuing nine years.

Respectfully submitted,

JOHN M. LITTIG, *President*,
JAMES H. PRESTON, *Mayor*,
JAMES F. THRIFT, *Comptroller*,
RICHARD GWINN, *City Register*,
HARRY FAHNESTOCK,
} *Board of Commissioners of Finance.*

ISAAC L. NEWMAN, *Deputy City Register*,
Clerk to Board of Commissioners of Finance.

APPENDIX

ANNUAL REPORT

OF THE

CITY ENGINEER

TO THE

MAYOR AND CITY COUNCIL OF BALTIMORE

FOR THE

FISCAL YEAR ENDING DECEMBER 31, 1913

BALTIMORE
MEYER & THALHEIMER
CITY PRINTER

1914

ORGANIZATION OF THE

CITY ENGINEER'S DEPARTMENT

H. K. McCAY.......................................City Engineer.
GEORGE M. BOTELER...............Chief Clerk and Paymaster.

Sub-Division of Street Repairs.

Sub-Division of New Paving.

Sub-Division of Bridges.

Sub-Division of Sewers.

Sub-Division of Sewers, House Connections.

Sub-Division of Inspection.

Sub-Division of Footway Inspection.

Sub-Division of Municipal Laboratory.

Sub-Division of Forestry.

INSTRUCTIONS TO FOREMEN AND OTHER EMPLOYEES

1. Foremen must be on the ground not later than 6.45 A. M., in order that the work may begin promptly at 7 o'clock.

2. Eight hours constitutes a day's work, and each man will be allowed only for the actual time worked.

3. The hours for every working day will be from 7 o'clock A. M. until 4 o'clock P. M., with one hour, 12 o'clock noon to 1 o'clock P. M., for dinner.

4. Gangs must not be worked overtime if it can be avoided.

5. Foremen must not leave the work without permission. If anything is needed, report it to the engineer in charge, his assistants, or send a message to the City Hall. When necessary for foremen or men to be at the City Hall, business must be promptly transacted; they will not be allowed to remain in or about the Hall.

6. Foremen will be held responsible for the amount and character of work done, and for the orderly behavior and industry of their men.

7. Foremen must lay out the work for their men and not select a paver to act as boss paver over the other men.

8. Foremen must not allow mechanics, pavers, rammers or carters to work as laborers, unless expressly authorized to do so by the engineer in charge.

9. Work must be so planned as to obstruct travel and inconvenience the public as little as possible. Refuse material must not be allowed to accumulate on the work. Streets must be in safe condition when the force leaves, and the proper lights and guards set.

10. A careful record must be kept of each man's time, with the dates, location, kind of work, and all facts necessary to make up correct payrolls and accounts of the work, and report to the engineer in charge or his assistants.

11. Foremen must keep a careful record of all tools and materials received and delivered; they will be held responsible for the economical use of materials, and must account for all losses and breakage of all tools. All broken or worn-out tools must be returned to the Property Yard.

12. No repaving must be done on rainy days, when the ground is soft, and the sand too wet. No time to be allowed on rainy days, except for service rendered.

13. It must be the constant effort to have good work done at the least cost to the city.

14. As little time as possible must be lost in moving from one job to another, and foremen must learn in advance where they are to go next.

15. Any employee who shall absent himself from the works, without good and sufficient cause, will be dismissed and his place filled by another man.

16. Any employee found under the influence of liquor, or using profane and abusive language, negligent, insubordinate, or in any way interfering with or obstructing the work, shall be promptly suspended by the foreman. A written report, giving the facts in the case, must be immediately transmitted to the engineer in charge, signed by the foreman.

17. Foremen must not frequent saloons under any pretext whatever during working hours, nor permit any one under their charge to do so. Anyone not complying with this order will be liable to dismissal.

18. All orders or tickets for material on Property Yard, or on contractors, must be written and signed by the foreman.

19. Foremen will in all cases make written reports of any accident, of however trifling a nature, that may occur on their work, giving date, names and addresses of witnesses, etc.

20 Any employee on the work who shall solicit contributions of contractors furnishing material, or of any other person, will be dismissed at once.

21. Foremen will be provided with copies of specifications for materials, and must carefully read the same, and must accept only material in accordance with said specifications.

22. The use of the city's tools or materials by any one, in doing private work in or out of working hours, is strictly forbidden; any violation of this order will be followed by immediate dismissal.

23. Foremen must carefully read the foregoing rules, familiarize themselves with them, and see that those employed under them also fully understand the rules.

REPORT

BALTIMORE, January 2, 1914.

To the Honorable the Mayor and City Council of Baltimore.

GENTLEMEN—I herewith submit the following report of the operations of the City Engineer's Department during the year 1913. The Department has been engaged in the installation of three important pieces of work during the past year and has pushed the construction of this work with considerable energy. These pieces of work were the paving of the Fallsway; the grading, paving and construction of the Key Highway and the completion of the overhead crossings to eliminate the grade crossings on the Baltimore and Ohio Railroad in South Baltimore. This construction work was undertaken in addition to the usual work of the Department of Street Repairs, but was operated with practically the same force and at very little additional expense.

FALLSWAY.

The first section of the Fallsway has been completed from Baltimore street to Bath street and opened for traffic. The second section, from Bath street to Madison street, has been contracted for and, at this time, the entire square from Madison street to Monument street has been paved. The viaduct, or third section, is under contract. It has progressed so far that the concrete walls and arches are rapidly assuming shape and work will be continued as long as the weather permits.

KEY HIGHWAY.

The contract for paving the first section of the Key Highway has been let and at the present time the highway has been very nearly paved along the south side thereof from Light street to Covington street, and if the weather is favorable this will be completed within the next week.

BALTIMORE AND OHIO RAILROAD GRADE CROSSINGS.

The Ostend Street Viaduct of the Baltimore and Ohio Railroad has been completed and formally accepted by the city. This was opened for traffic on November 24. In connection with this viaduct, Ostend street has been improved to Ridgely street—a distance of two squares. These squares have been paved with smooth pavement (bituminous concrete being used), which makes a complete connection between Charles street and Ridgely street. This is one of the most important improvements that has been completed in South Baltimore during the year.

The Lee Street Viaduct, entrance to which is on Barre street, is about completed.

There is only one more viaduct to be constructed—namely, Cross street—and it is expected that this viaduct will be constructed this coming year. It will be noted that there have been two viaducts—namely, the Stockholm (or Ostend) street and the Lee street—completed this year.

REPAIR DIVISION.

The operations of the Repair Division are thoroughly described in the report of Assistant City Engineer Vandevanter, which is herewith attached.

FOOTWAY DIVISION.

I call your particular attention to the Footway Division, which has been extremely active, as shown by the following statement:

Total number of notices sent out to property-owners (showing an increase over 1912 of 4,523)	11,023
Total number of notices to lay concrete footways	8,088
Total number of square feet of concrete footways laid	1,485,733
Total number of concrete footways laid (showing an increase over 1912 of 5,867)	7,442
Total number of repairs made to footways	2,935
Total number of surface drains put under footways (showing an increase over 1912 of 2,299)	3,174
Total number of investigations made concerning footways (showing an increase over 1912 of 709)	10,000

PRIVATE PAVING AND INSPECTION.

I call your attention to the increased activities of the Construction Department of the Private Paving and Inspection Division. This Division, during the past year, has installed work amounting to $192,047.76. As a flat charge of 10 per cent. is made on all of this work, this Division earned for the city the sum of $19,204.77.

SEWER CONNECTIONS.

The Division of Sanitary Sewer Connections during the past year has made 1,931 contracts on which there is a profit of $5, making a profit of $9,655; the expense of this Division being $1,002.55, a net profit of $8,652.45 was left.

INSPECTION BUREAU.

The Inspection Bureau, which was formerly operated at an expense of $8,000 annually, shows a profit of $1,660—a net saving to the city of $9,660.

On my recommendation, the City Council adopted an ordinance changing the grade of the approaches to the Cross Street Viaduct over the tracks of the Baltimore and Ohio Railroad, which affected a saving of $51,000 by reason of not having to change the grades and repave Eutaw street, Warner street, Cross street and Howard street.

RECAPITULATION.

To summarize the above-mentioned savings and to show the efficiency with which the Department has been operated, I would recapitulate as follows:

Saving on Cross Street Viaduct	$51,000 00
Purchasing of cement in bulk	5,150 00
Inspection Bureau saving	9,660 00
Earned by Private Paving and Inspection	19,204 77
Sanitary sewer connections	8,652 45
Balance, due to new paving rates	7,171 05
	$100,838 27

SALE OF OLD MATERIAL.

The activity of every division of this Department during the past year has been pronounced. The division having charge of the sale of old material during the year has turned over to the City Register the sum of $9.509.57; this being nearly twice the amount received from the sale of old material during the year 1912.

MUNICIPAL GARAGE.

The Department has assumed, during the past year, the complete control of the municipal garage.

BUREAU OF INFORMATION AND COMPLAINTS.

Under the direction of your Honor, I have assumed charge of the Bureau of Information and Complaints and it is expected that this bureau will be in full working order within the next thirty days.

RECOMMENDATION.

I renew my recommendation, made to the Board of Estimates during the past year, for the extension of the Fallsway to Lombard street by means of a proper roof on which the paving can be laid. The sewerage work of caring for the flow of the Falls has been completed and if the proper roof is built between the present walls of the Falls this highway can be extended to Lombard street and to Pratt street with comparatively little expense. This would give a most excellent outlet for traffic that uses this low-grade street, which would practically connect the railroad stations in the center of the city with the wharves and President Street Station in South Baltimore.

I also have recommended to the Board of Estimates, which recommendation has been approved by your Honorable Body, the establishment of a municipal asphalt plant, the establishment of which, I believe, will effect a large saving to the city.

I desire to take this occasion to call attention to the efficiency of the various divisions of this Department. Each division is in charge of a capable and zealous engineer, each one of which is endeavoring to make a record for his division and to facilitate as much as possible the operation of his division and the efficiency of the entire Department.

Respectfully submitted,

H. K. McCay,
City Engineer.

AMOUNT EXPENDED IN THE CITY ENGINEER'S DEPARTMENT FROM JANUARY 1, 1900, TO DECEMBER 31, 1913.

YEAR.	Amount Expended in Old City.	Amount Expended in Annex.	Totals.
1900	$254,984 61	$39,893 55	$294,878 16

REPORT OF

C. O. VANDEVANTER, *Assistant City Engineer*

SUB-DIVISION OF STREET REPAIRS AND NEW PAVING

Report of C. O. Vandevanter, Assistant City Engineer
1913

City Engineer's Department,
Sub-Division of Street Repairs and New Paving,
Baltimore, January 1, 1914.

Mr. H. K. McCay, *City Engineer.*

Dear Sir—I beg to submit the following report of operations in the Division of Street Repairs and Maintenance during the year 1913.

This comprised the repair and maintenance of all streets, roads and alleys in the city not under a contractor's guarantee (except in cases where a contractor holding such a guarantee failed to obey the Department's order to make repairs, in which case, this Division makes them on guaranteed streets), laying new flag and vitrified block crossings, the laying of improved paving under special ordinances, the repaving over trenches opened by various corporations and individuals, including all city departments; the maintenance and supervision of the city property yards and the readjustment of street intersections where storm-water inlets have been constructed.

During the year 1913 a number of streets were paved with new pavements in the Annex, in the old city limits and for the Paving Commission, four of which it was thought best to give more in detail than is usually done.

On the south side of University Parkway, from the east curb line of Charles street to the west curb line of St. Paul street, this street was narrowed by moving the gutter toward the center line five feet, throwing this into a parkway between the gutter and the footway and the balance of the street was rebuilt by this Department, using bituminous concrete.

Edmondson avenue, from the west end of the bridge over Gwynn's Falls to the western city line, was rebuilt by laying a strip of bituminous concrete eighteen feet wide, the south edge of which was five feet from the north rail of the United Railways and Electric Company, and repaving on the north side of this with cobble to the gutter—the bituminous concrete being applied by a contractor.

Pratt street, from the header on the west side of President street to the west building line of Central avenue, which was a granite block street on a sand base, was repaved by the use of granite blocks on concrete base, with a tar and gravel filler. This street was widened by setting the curb back one foot on each side, thus increasing the width two feet.

Tables are attached showing the detailed cost of these streets.

New Pavements Laid.

The amounts of new pavements laid by contract and by the Department's labor are given below:

Kind of Pavement.	Lengths (All Widths) Feet.	Square Yards.
Sheet asphalt	....	....
Vitrified block	2,644.7	5,487.9
Granite block with white oak keys	700.0	2,727.0
Granite block	6,775.6	36,256.3
Macadam (ordinary)	160.0	320.0
Macadam (bituminous)	667.0	2,445.5
Bituminous concrete on concrete	....	1,910.5
Bituminous concrete on cobble	1,788.9	6,326.2
Bituminous concrete on macadam	6,744.0	9,997.6
Asphalt block on concrete	331.0	1,030.0
Sandstone block	300.0	522.0
Cobble	4,826.0	5,808.0
Total length, based on 30-ft. street (4.14 mi.)	24,937.2	72,831.0

STREETS AND STREET INTERSECTIONS PAVED WITH NEW PAVEMENTS IN 1913.

Ostend st......	Warner st.....	China al.. ...	160.0	20.3	361.0	....	Ordinary macadam.
Total cost..						$10,655 09	

Charged to regrading, repairing, underpinning walls on Howard, Stockholm and Eutaw streets, etc.

STATEMENT OF EXPENDITURES — SPECIAL ORDINANCES AND ALLOTMENTS.

Regrading, repaving and curbing Madison street, from east side of Luzerne avenue to west side of Grove alley (Ordinance No. 125, 1912)	$2,557 91
Regrading, repaving and curbing Garrett street, from west side of Park avenue to east side of Howard street (Ordinance No 133, 1912)	2,500 00

REGRADING, REPAVING, UNDERPINNING WALLS ON HOWARD STREET, STOCKHOLM STREET, EUTAW STREET AND NEIGHBORING STREETS.

(Incident to the construction of the Stockholm Street Viaduct and widening of Stockholm street.)

This appropriation, amounting to $25,000, was provided in the 1912 Ordinance of Estimates to cover costs to the city of work incidental to the construction of the Ostend Street Bridge by the Baltimore and Ohio Railroad Company under the terms of Ordinance No. 387, approved August 16, 1909.

This Division expended for the grading and paving of Ostend street, from the east building line of Ridgely street to the west building line of Russell street; from the east building line of Russell street to the west building line of Warner street; from the east building line of Warner street to the west building line of China alley; intersection of Warner and Ostend streets; Howard street, from the south curb line of West street to two hundred and ten feet south of the north curb line of Ostend street; the south side of Ostend street, from the east building line of Howard street to the east building line of Plum alley; Denver street, from the north curb line of Ostend street to the south curb line of West street, $20,789.91.

Other expenditures from this appropriation were made by the Bridge and Sewer Divisions of this Department.

STATEMENT OF EXPENDITURES.

Labor, as per pay roll	$17,207 61
Hauling	813 61
Stone, 256,172 yards	609 30
Cement	510 30
Sand, 488 yards	503 32
Gravel, 343,943 yards	367 86
Road binder, 3,347 gallons	301 23
Filler, 2,504 gallons	295 88
Coal, 11 tons; wood, ½ cord	56 75
Wire mesh	56 56
Filler gravel, 25 yards	32 50
Installing road crossing	23 31
Adjusting manhole	6 25
Canvas	2 00
Dry cells	1 50
Coal oil and gasoline	1 45
Gauge glasses	38
Nipples	10
	$20,789 91

AMOUNT OF REPAIR WORK DONE IN 1913.

The following table shows the amounts of work done during the year 1913 under all accounts, the same data for 1912 and the increase or decrease, as the case may be, is also shown.

CLASSIFICATION.	Unit.	1912.	1913.	Increase.	Decrease.
Asphalt block pavement repaired	Sq. Ft.	307,534	574,669	267,135	
Cinders hauled	Ct. Lds.	5.912	4,198		1,714
Cobble base on roads	Sq. Ft.	2,584	21,035	18.451	
Cobble pavement (new)	Sq. Ft.		47,632	47.632	
Cobble pavement repaired	Sq. Ft.	968.502	1,006.483	37.981	
Cobble rebuts paved	Sq. Ft.	52,262	37,482		14,780
Concrete curb constructed	Lin. Ft.	5,156	7.605	2.449	
Concrete curb reset	Lin. Ft.		334	334

Repairs to Alcott's wood wedge block pavement	124.0	242 40	1 9549

PAVING PRIVATE ALLEYS.

Assessments were made for paving private alleys to abate nuisances, under orders from the Health Department, based on Ordinance No. 13, approved October 23, 1905, as follows:

Alley in rear of north side of 700 block Thirty-fourth street, between east building line of Elm avenue to west building line of first alley west of Chestnut avenue. Assessment completed November 9, 1912. Amount, $1,000.

Alley south of Gorsuch avenue, from east building line of Tyler street to west building line of Kennedy avenue. Assessment completed April 15, 1913. Amount, $800.16.

Alley west of Ostend street, from alley north of Scott street to Wicomico street. Assessment completed August 13, 1913. Amount, $2,460.94.

Hudson alley, from Oliver street 110 feet south, and alley in rear of No. 47 to 65 West Oliver street. Assessment completed October 11, 1913. Amount, $1,337.52.

STATEMENT OF EXPENDITURES.

Labor, as per pay roll	$2,644 42
Refunds	452 26
Vitrified block, 52,000	1,024 43
Paving sand, 272½ cubic yards	269 70
Gravel, 126.4 cubic yards	181 74
Screened sand, 13½ cubic yards	15 53

PRIVATE PAVING AND INSPECTION.

The work under this heading includes the repaving over trenches opened by all city departments, public service corporations and plumbers on all streets not under a contractor's guarantee. Where a contractor fails to comply with his guarantee, when notified by the City Engineer to repave a cut, this Department makes the repairs and charges the responsible party direct. This account also includes repairs, other than cuts to pavements under a contractor's guarantee, where the contractor has failed to comply with a repair notice from the City Engineer; the cost thereof being charged to the contractor direct. It also includes all work for public service corporations and city departments, when requested by them, and a great amount of special work for private corporations and individuals, upon their application, in writing, to this Department.

The work done under this account for the year 1913 amounts to $151,787.46. A total of 8,070 jobs were handled during the year, distributed as follows: 5,611 for the Water Department; 1,245 for the Electrical Commission; 248 for the Sewerage Commission; 327 for the Chesapeake and Potomac Telephone Company; 639 for other city departments, corporations and private individuals. Cinders and refuse hauled, 5,335 loads.

In addition to the above, the force employed to carry on this work made repairs to streets charged against appropriations of this Department, classified as follows: Cobble stone repairs, 50,705 square feet; gutter relaid, 4,643 lineal feet; curb reset, ,1540 lineal feet; flag stone reset, 1,701 square feet; vitrified block on sand, 2,397 square feet; vitrified block on concrete base, 1,668 square feet; vitrified block gutter, 264 lineal feet; belgian block on sand, 30,894 square feet; belgian block on concrete base, 41 square feet; wood block on concrete base, 2,307 square feet; asphalt block on sand, 4,547 square feet; asphalt block on concrete, 30 square feet; cinders and refuse hauled, 1,239 loads. Cost: Labor, $5,195.49; material, $1,243.35.

A very large part of the above work, charged to the appropriation of this Department, was in connection with the repairs over trenches and cuts where it was not practical to confine the repaving to the areas allowed by the department making the cut.

The following table shows the amount of work done under new paving rates:

Class.	Square Yards.	Amount Charged.
Sheet asphalt	40.23	$241 38
Belgian block	202.51	1,241 90
Vitrified block	137.50	818 23
Asphalt block	388.37	1,832 71
Wood block	29.77	159 96
Macadam	558.01	1,623 58
Total		$5,917 76

Amount of bills rendered to Water Department, Electrical Commission and Sewerage Commission; actual cost plus 10 per cent.:

Water Department	$17,758 45
Electrical Commission	10,118 07
Sewerage Commission	34,299 80

Areas are included in the following summary of private paving and inspection work:

Class.	Square Yards.	Expended.	Avg. Cost per Sq. Yd.
Cobble repaved	53,139	$18,912 00	$0 36

PROPERTY AND STORAGE YARDS.

Rogers Avenue Yard.

The force employed at this yard consists of the following: One superintendent, one assistant superintendent, one clerk, one blacksmith, one blacksmith's helper, one emergency wagon and horse and one horse and cart.

An average of nine laborers were carried on the pay roll.

The number of emergency jobs, due to reports from Police Department and others, attended to from this yard was 861.

Lights were placed and maintained on 261 emergency calls and turned over to other foremen, contractors and departments.

There were 11,199 loads of materials and tools received at this yard and 11,116 loads of materials and tools distributed from this yard during the year 1913.

This yard furnished the Engineer's Department rodmen on 132 days. Men were sent to receive and tally vitrified block, belgian block and wood block on 171 days.

Foremen were furnished men for emergency work on 460 days and carts and horses on 70 days.

The laborers repaired and repainted steam rollers 1, 2 and 3; street sweeper; tar boilers 1, 2, and 3; concrete mixers 1, 2 and 3; two-horse wagons 1, 2 and 3; drays 1 and 2; water wagons 1 and 2; oil wagon; tool boxes; grout boxes and small tools of every description.

After deducting men furnished for outside work, the number of laborers actually working in this yard during the year 1913 averaged five per day.

In order to provide increased facilities for testing brick, the old frame rattler shed was demolished and a new concrete building erected. Foundations, walls, floor, roof and partitions are all of concrete. Size of building is 24 feet by 24 feet, height nine feet, containing two rooms separated by a six-inch partition. Building is covered with a six-inch concrete roof. Entire building equipped with electricity. For carrying off dust, a motor-driven fan was provided and connected with the Low Street Sewer. Concrete bases for three rattlers and three motors were also erected. Cost of structure was $1,096.13. The building is equipped with two Hetherington & Berner rattlers, two Wagner Electric Manufacturing Company's 7½-horsepower motors for rattlers, one Wagner Electric Manufacturing Company's 2-horsepower motor for fan, one fan or blower for removing dust. One thousand two hundred brick tests were made in this new building during the year 1913.

A frame shed for accommodating the steam rollers, mixers and large rolling stock was erected during the year 1913. Size, 75 feet by 22 feet and 16 feet high. Cost, $236.99.

Total yardage, 1913, 183,456; total yardage, 1912, 145,802; increase, 1913, 37,654. Total length (lineal feet), 1913, 91,221; total length (lineal feet), 1912, 59,229.2; increase, 1913, 21,991.8. Mileage, 1913, 15.38; mileage, 1912, 11.22; increase, 1913, 4.16.

University Parkway, from the east curb line of Charles street to the west rail of the United Railways and Electric Company's tracks at the intersection of St. Paul street and University Parkway, was formerly water-bound macadam with cobble rebut and vitrified brick gutters. The gutter was moved in five feet toward the center of the road, repaved and granite headers set along the railway area from the east curb line of Charles street to the west building line of St. Paul street, and the macadam base reshaped and covered with two inches of bituminous concrete by the repair forces of the City Engineer's Department. Work was commenced on May 8 and completed June 14, 1913. The cost of the work was as follows:

Grading and setting 456 feet of headers, at $0.2367..........	$107 96
Grading and repaving 2,197 square feet of cobble rebut, at $0.1068...	234 69
Preparing 1,257.4 square yards of macadam base, at $0.3247.	408 29
Covering 1,257.4 square yards of 2-inch bituminous concrete, at $0.777	976 96
	$1,727 90

EDMONDSON AVENUE, FROM WEST END OF BRIDGE OVER GWYNN'S FALLS TO WESTERN CITY LINE.

Edmondson avenue, from the west end of the bridge over Gwynn's Falls to the Western city line, was a water-bound macadam street with a double railroad track along the south edge. Only a small portion of the distance was provided with gutters, the balance being simply a dirt ditch. This roadway was improved by rebuilding the macadam base and covering with two inches of bituminous concrete. For the first 400 feet west of the bridge the bituminous concrete was run from the railway area to the gutter, from that point to the western city line a strip of cobble was paved on each side, about one foot on the south side and five feet on the north side. Gutter stones were laid the entire length and cobble rebut gutters paved.

A sub-drain, 375 feet long, at Station 15-40 to Station 19-15 (Station 0 being at the west end of bridge) was laid along the south edge of the cobble paving to take care of the spring which developed in the roadbed. Two lines of pipe—one 15 inch and one 12 inch—were laid across the road to take care of the drainage. This work was commenced on March 25, 1913, and completed July 3, 1913.

	Sq. Yds.	Cost per Yd.	Amount.
Cobble paving	5,152.0	$0.8899	$4,585 23
Preparing macadam base for bituminous topping	8,975.5	.5106	4,583 14
Drainage, including the laying of 46 feet 15-inch and 30 feet 12-inch terra-cotta pipe	....	....	....
Terra-cotta pipe (375 feet 2½-inch drain) and building two inlets	....	....	114 35
Bituminous concrete, 2-inch topping	8,975.5	.95	8,562 72

GRANITE BLOCK PAVING ON PRATT STREET.

Pratt street, from header on west side of President street to west building line of Central avenue, including intersections. This work was begun on May 8, 1913, and finished October 27, 1913, but work was not continuous, caused by failure of delivery of granite blocks. Owing to the heavy amount of traffic on the street and its congested nature, caused by the double car tracks, it was decided to increase the width outside of car tracks; and, in order to accomplish this, the curb was moved and reset one foot nearer the building line on both sides of the street, which work is included in the cost of resetting curb.

EXPENDITURES.

Labor, as per pay rolls	$8,557 33
Granite block, 133,721 at $62.50	8,357 56
Granite block, 4,750 at $58	275 50
Hauling granite block, Barrett filler and excavation	841 50
Barrett block filler, 13,293 gallons at $0.0832	1,105 98

Gravel, 599 cubic yards at $1	$599 00
Paving sand, 698.1 cubic yards at $0.85	593 39
Screened gravel, 40.8 cubic yards at $2	81 60
Grits, 14.5 cubic yards at $1.20	18 60
Stone dust, 13.07 cubic yards at $0.85	11 11
Cement, 1,862 bags at $0.30	558 60
Coal, 5.63 tons at $4.75	26 75
Cost of testing 13,293 gallons of Barrett filler	12 00
Coal oil, 132 gallons at $0.09	11 88
Crushed stone (Ashland Avenue Lot), four cubic yards at $0.85	3 40
Curb iron, 100 lineal feet at $0.15	15 00
Cement, 21 bags at $0.30	6 30
Curb iron frogs, 40 at $0.04	1 60
Sundries—engine oil, waste, etc	2 51
	$21,079 91

Statement of Cost, Including Labor and Material.

Moving and resetting 2,262.4 lineal feet of granite curb, at $0.5252	$1,188 30
Redressing 2,262.4 lineal feet of granite curb, at $0.2321	525 23
Barring up and hauling 5,035 square years granite block pavement, at $0.281	1,414 14
Grading 1,260 cubic yards excavation, at $1.349	1,699 85
*Laying 4,235 square yards of 6-inch concrete, at $0.61	2,583 41
Paving with tar and gravel filler 5,035 square yards new granite block, at $2.6966	13,577 46
Constructing 95 lineal feet of concrete curb, at $0.8108	77 13
Coal oil, 132 gallons at $0.09	11 88
Sundries—engine oil, waste, etc	2 51
	$21,079 91

---

*The yardage of concrete is the superficial area of the paving, less the tie area in tracks.

Respectfully submitted,

C. O. VANDEVANTER,
Assistant City Engineer.

1. Sheet asphalt over cobble stone, except Chester street, between Jefferson street and McElderry street, which is to be sheet asphalt on a concrete base.
2. Omit intersection at Frederick street.
3. Omit intersections at Lombard, Baltimore and Fayette streets.
4. Concrete base at Wolfe street.
5. Omit intersection at Greenmount avenue.
6. Omit intersection at Aisquith and Gay streets.
7. Railway area at Caroline street to be vitrified block.
8. Intersection of Monument street to be granite block, 6-inch concrete base; intersection of Madison street to be vitrified block, 6-inch concrete base.
9. Omit intersection of Eager street; sheet asphalt, 6-inch concrete base, between curb and rails; vitrified block, 6-inch concrete base, between rails.
10. Intersection of Madison street to be vitrified block on 6-inch concrete base; intersection of Ashland avenue to be sheet asphalt on a 6-inch concrete base; from north side of Madison street to the south side of Ashland avenue to be sheet asphalt on cobble.
11. Vitrified block between outer rails of railway tracks, 6-inch concrete base.
12. Omit intersection of Biddle street and Preston street.
13. Omit intersection at Greene street.
14. Omit intersection at Lombard street; railway tracks to be vitrified block on 6-inch concrete base.
15. Omit intersections at Oliver street, Chase street, Gay street, Biddle street, Eager street and Preston street; vitrified block between outer rails.
16. Omit intersections at Lexington street and Baltimore street; granite block in railway area of intersection of Fayette street.
17. Omit intersections at Davis street and Holliday street.
18. Omit intersection at Lee street.
19. Omit intersection at Water street.
20. Omit intersection at Hillen street.
21. Omit intersections at Hillen street, Gay street and Ensor street.
22. Omit intersection at High street.
23. Omit intersection at Forrest street.
24. Omit intersections at Aisquith street, Harford avenue and Broadway; granite block between outer rails, Bond street to Broadway.
25. Omit intersection at Charles street.
26. Include intersection of Plowman street.
27. Omit intersection at Lombard street.
28. Omit intersection at Greene street.
29. Intersection of Baltimore street to be paved with granite block, 6-inch concrete base, bituminous filler.
30. Omit west half of Central avenue from N. B. L. Pratt street to N. B. L. Granby street and east half from S. B. L. Granby street to N. B. L. Fayette street; omit intersections of Baltimore street, Gay street, Chase street and Preston street; street railway area to be vitrified block, 6-inch concrete base; steam railway area to be granite block, 6-inch concrete base.
31. Omit intersections at Lamont avenue, Harford avenue, Bond street, Aisquith street and Caroline street.
32. Omit intersections at Harford avenue, Bond street and Caroline street.
33. Omit intersections at Aisquith street, Harford avenue and Central avenue.
34. Omit intersections at Biddle street and Preston streets.
35. Omit intersections at Hoffman street, Biddle street and Preston street.
36. Omit intersection at Bolton street.
37. Intersection of McMechen street to be vitrified block.
38. Omit intersections at Orleans street and Jefferson street; intersection of Monument street to be vitrified block.
39. Intersection of McMechen street to be vitrified block.
40. Omit intersections at Preston street and Hoffman street; vitrified block, cement filler, between outer rails.
41. Vitrified block gutters to be used as directed by Chief Engineer.
42. Omit intersection at John street.
43. Omit intersections at Lombard street, Baltimore street, Orleans street, Fayette street, Jefferson street and McElderry street.
44. Omit intersection at Central avenue.
45. Omit intersection as Pearl street; granite block between Pine street and Paca street to be redressed and reset with bituminous filler, 6-inch concrete base.
46. Omit intersections at Twenty-seventh street, Twenty-eight street and Twenty-ninth street.
47. Omit intersection at Forest Park avenue.
48. Omit intersection at Callaway avenue.
49. Omit intersection at Oakfield avenue.
50. Omit intersection at Twenty-ninth street.
51. Omit intersection at Twenty-seventh street.
52. Omit intersection at Windsor Mill road.
53. Omit intersection at Hampden avenue.
54. Base is top of drainage tubs and not included in price.
55. Omit intersection of Lexington street.
56. Omit intersection of Hillen street.
57. Omit intersections of Greenmount avenue and Harford avenue.
58. Vitrified block gutters and crossings to be used at the discretion of Chief Engineer.
59. Vitrified block on 6-inch concrete base, cement filler, between outer rails; sheet asphalt on concrete base in dummy between W. B. L. Lawrence street and Fort McHenry Gate.
60. Eastern terminus of this paving on McMechen street will be at W. B. L. Malster avenue; omit intersection of Mt. Royal avenue.
61. Omit intersection of Lafayette avenue; wire-cut lug blocks to be used at discretion of the Chief Engineer.
62. Omit intersections of Druid Hill avenue, McCulloh street and Madison avenue.
63. Omit intersections of McCulloh street, Madison avenue and Eutaw Place.
64. Omit intersection of McCulloh street.
65. Sheet asphalt on concrete base in railway area, between N. B. L. Lafayette avenue and S. B. L. North avenue; omit intersections of Lanvale street, Lafayette avenue, Mosher street and McMechen street.
66. Omit intersections of Charles street, St. Paul street, Calvert street and Guilford avenue; vitrified block on 6-inch concrete base with cement filler between outer rails; wood block stretchers along outer rails adjacent to sheet asphalt paving.
67. Intersections of Harford avenue and Aisquith street to be included in this contract.
68. Omit intersections of Oliver street and Lafayette avenue.
69. Omit intersection of Chase street.
70. Intersection of Franklin street to be old granite block, 6-inch concrete base, bituminous filler.
71. Pave west half of Central avenue, from S. B. L. Fawn street to N. B. L. Pratt street, granite block, 6-inch concrete base, cement filler, except in railway area, which is to be bituminous filler; pave west half of Central avenue, from N. B. L. Pratt street to N. B. L. Granby street; pave east half of Central avenue, from S. B. L. Granby street to N. B. L. Fayette street; vitrified block on 6-inch concrete base with cement filler, except railway area to be granite block, 6-inch concrete base, bituminous filler. The limits of this contract to include that part of Central avenue not included in Contracts 26 and 27.
72. Vitrified block Valley gutters and 6-inch armored concrete curb.
73. Macadam base furnished by City Engineer's Department.
74. Sheet asphalt, concrete base, in railway area from S. B. L. Preston street to a point 72.5 feet south of southwest corner of Eager Place; vitrified block on 6-inch concrete base and cement filler between outer rails elsewhere, also intersections of Fairmount avenue and Monument street.
75. Vitrified block, 6-inch concrete base and cement filler, between outer rails at intersection of Caroline street.
76. Vitrified block, 6-inch concrete base, between outer rails.
77. Intersection of John street to be sheet asphalt, with vitrified block between outer rails.
78. Intersection of Monument street to be vitrified block on 6-inch concrete base.
79. Intersection of Fairmount avenue and Fayette street to be vitrified block, 6-inch concrete base.
80. Intersection of Patterson Park avenue to be sheet asphalt, with vitrified block on 6-inch concrete base between outer rails.
81. W. B. L. Frederick street to E. B. L. Gay street to be vitrified block, 6-inch concrete base; E. B. L. Frederick street to W. B. L. Market Place to be granite block, 6-inch concrete base, bituminous filler.
82. Omit west half of Central avenue, S. B. L. Fawn street to N. B. L. Pratt street.
83. Omit intersection at Oliver street; Federal street railway area to be vitrified block.
84. Include paving of Patterson Park avenue, from southwest to northwest building line of Lombard street.
85. Area of Presstman street, from E. C. L. Linden avenue to S. B. L. North avenue, in included.
86. Area of Willian street, from southeast to northeast building line of Hamburg street, is included in total area.

IMPROVED PAVEMENTS UNDER GUARANTY, JANUARY 1, 1914.—Concluded

87. Area of Central avenue, from S. B. L. to E. C. L., is included in total area; also paving of Oliver street, from W. B. L. Harford avenue to E. B. L. Central avenue.
88. Paved under private contract.
89. Granite blocks in railway area.
90. Except intersection of Roland avenue.
91. Cobble in railway area.
92. From Taylor street to Valley street paved with granite blocks, also railway area.
93. Guaranty expires: Liberty Heights avenue to northern city limits, February 15, 1914; Liberty Heights avenue to Liberty road, November 24, 1914.
94. Except intersection of Granada avenue.
95. Paved for C. E. Spalding Company.
96. Except intersection of Charles street.
97. Except intersections of Charles street, St. Paul street and Calvert street.
98. Except St. Paul street car tracks; granite blocks in railway areas.
99. Formerly Harrison street.
100. Two driveways, each thirty-three feet wide, with parkway in center.
101. Under ordinance.
102. See Remington avenue and First avenue
103. Omit intersection at Chase street.
104. Omit intersection at Howard street.
105. Repaved by City Engineer.
106. Except intersection with Hollins street; Bl-Bl in old pavement.
107. Paving on left half extends to line, five feet west of E. C. L. Garrison avenue.
108. Paved under private contract (Ordinance No. 125, 1912).
109. Except intersection with Denison street; included in Denison street (Contract Bl-Bl).
110. Include 15-foot alley, from N. C. L. Keyworth street to S. B. L. Old Pimlico road.
111. Streets completed, but contract incomplete.
112. Omit intersections at Preston street and Lamont avenue.
113. Omit intersection at Gay street.
114. Omit intersections at Greenmount avenue, Central avenue and Federal street; railway area to be vitrified block.
115. Omit intersection at Wilson street; intersection of McMechen street to be vitrified block; between rails at Caroline street to be vitrified block.
116. Outside area includes vitrified block gutters.
117. Omit intersections at Madison street, McElderry street and Jefferson street.
118. Omit intersection at Forrest street.
119. Outside area includes vitrified block gutters.
120. Omit intersections at Preston street and Chase street; Federal street railway area to be vitrified block.
121. Omit intersections at Aisquith street, Harford avenue and Central avenue.
122. Includes vitrified block alleys and gutters.
123. Omit intersections at Oliver street and Lanvale street.
124. Omit intersection at Montford avenue.
125. Omit intersections at Harford avenue, Ensor street and Aisquith street.
126. Omit intersections at Madison avenue, Eutaw Place and Linden avenue.
127. Omit intersection of Montford avenue.
128. Omit intersection at Brevard street.
129. Work done by surface heater method, no base laid.
130. Paving between outer rails at intersections of Mosher street and Division street to be vitrified block.
131. Vitrified block gutters and crossings to be used at the discretion of the Chief Engineer.
132. Include vitrified block gutters.
133. Omit intersection at Lombard street.
134. Vitrified block to be used between outer rails, with wood block liners.
135. Omit intersections at Lafayette avenue, McMechen street and Wilson street.
136. Include west intersection at Charles street; omit intersection at Hanover street.
137. Omit intersection at Central avenue.
138. Omit intersection at Penn street.

**Price given is for asphalt topping only, binder put in by tons and base by cubic yards.

REPORT OF

J. W. OGIER, *Assistant Engineer*

SUB-DIVISON OF BRIDGES

Report of J. W. Ogier, Assistant Engineer
1913

BALTIMORE, January 24, 1914.

MR. H. K. MCCAY, *City Engineer.*

DEAR SIR—I beg to submit the following report of the operations of the Division of Bridges and Grades for the year ending December 31, 1913. This includes the following:

Maintenance of existing bridges and culverts, the erection of new structures and design, and construction of improvements and additions. The record of street grade establishments, the inspection of maintenance of improved pavements during guarantee period.

The supervision on the part of the city of the work undertaken by the Baltimore and Ohio Railroad Company in accordance with the terms of the Grade-Crossing Elimination Ordinance No. 387, approved August 16, 1909.

Supervision of Nanticoke street material storage lot. Operation of stone-crushing plant, converting refuse cobble and other stone into suitable forms of crushed stone for use in construction work of the Department.

Considerable work of a miscellaneous character was done and charged to the account of Repairs of Roads and Streets.

WORK DONE FOR ACCOUNT OF REPAIRS OF ROADS AND STREETS

Nanticoke Street Storage Lot No. 2.

This was used for the receipt, storage and distribution of paving materials, in addition to stone-crushing operations; a watchman was employed and such forces as were needed from time to time; expenditures on account of handling old materials, including hauling, amounted to $3,776.90.

In addition to handling of paving materials, the ironwork taken from the Baltimore and Lexington street bridges over Jones Falls, consisting of plate girders, floor plates, brace, frames, etc., which it was deemed advisable to retain rather than dispose of them as old iron, was stored here either for future use by this Department or for disposition at a price commensurate with their value as fabricated members.

Miscellaneous expenditures: A lattice screen was erected on the north building line of North avenue, the full width of Mount Royal Material Storage Lot, in order to render its appearance less unsightly. An arched entrance eighteen feet wide was provided and vines were planted which will eventually cover the entire lattice work.

A wood fence was erected surrounding Ashland avenue lot also, with the intention of improving its appearance. Charges arising on account of maintenance of improved pavements under guarantee were also made against this account.

STATEMENT OF EXPENDITURES.

Carpentry work in office	$32 52
Cement	17 02
Draughting room and field supplies	5 65
Hauling	2.696 44
Hardware, tools, etc	115 18
Incidentals, miscellaneous, etc	55 90
Inspecting improved pavements under guarantee	1,227 00
Labor, as per pay rolls	7,984 58
Lime	1 00
Lumber	2,783 51
Motorcycle, accessories, etc	592 37
Office supplies	22 75
Paints, oils, brushes, coal tar, etc	159 13
Repairs to improved pavements under guarantee	734 68
Sand	8 40
Stone crushing	10.509 06
Surveys and grades	112 00
Total	$27,057 19

There had been a considerable accumulation of useless cobble, gutter, curb and flag stone, etc., on the Ashland avenue and Nanticoke street material storage lots, due to substitution of improved paving for cobble, which it was deemed advisable to crush for general construction purposes. A contract was executed by this Department and Clarence M. Morfit for this purpose, and the following work done thereunder at a cost of 95 cents per ton for crushing.

At Ashland avenue lot, 4,132.5 cubic yards were crushed.

At Nanticoke street lot, 4,434 cubic yards. A considerable quantity of this stone has been used during the year for various purposes and charged accordingly.

There remains in stock for further use as needed, 3,142.3 cubic yards; at Ashland avenue lot and at Nanticoke street lot, 1,598.1 cubic yards.

Grade-Crossing Elimination Under Ordinance No. 387, Approved August 16, 1909.

The past year has been the most active, and more actual construction work has been completed than in any other year since the passage of the ordinance.

The Ostend Street Viaduct was finished and opened to traffic November 26. This bridge now provides the connecting link in a continuous highway along the water front without any obstruction by railroad tracks, and at the same time connecting with improved smooth pavements Ridgely street, an arterial highway for Southwest Baltimore; and Hanover street, bearing a similar relation to South Baltimore.

The approaches beginning at Sharp street on the east and Warner street on the west, consist of gravity concrete retaining walls, in the case of the west approach being founded on sand and gravel, and the east approach on a wood-pile bearing. The roadways of both approaches are paved with granite block paving on a concrete base laid over compacted earth fills.

The bridge spans extending from the west building line of Eutaw street to the east building line of Howard street are of the plate girder construction, with the floor systems of reinforced concrete supported by transverse "I" beams, and paved with granite block wearing surface. The spans vary from about fifty to one hundred feet. They are supported by iron columns and piers, having in all cases wood-pile bearings in foundation. The roadway is 21 feet wide and a reinforced concrete footway ten feet wide is suspended along the south side.

Construction work began on August 14, 1912. It was somewhat impeded in the beginning by the necessity for a revision of the plans, due to the fact that difficult foundation problems were encountered; a large part of the area occupied by the foundations of the structure having been, at one time, reached by tidal waters, and consisted largely of an alluvial deposit.

Charles F. King & Co., of Philadelphia, Pa., contracted with the Baltimore and Ohio Railroad Company to build the structure The work proceeded under the supervision and direction of the City Engineer, as per the terms of Ordinance No. 387 above. The cost of the completed structure is approximately $165,000.

Baltimore city, upon acceptance of the bridge, acquired absolute title, with responsibility for maintenance of the two approaches. The title and maintenance of the bridge spans remains with the Baltimore and Ohio Railroad Company.

Before construction work began on this structure, Ostend street (formerly Stockholm street), was not graded or paved between China street and Ridgely street, although the street bed was owned by the city. The City Engineer, realizing the desirability of opening this thoroughfare, which will considerably shorten hauls in this vicinity, and at the same time increase the efficiency of the bridge, proceeded to grade, out of available funds, this portion of the street. It is expected that the opening of this bridge and street and the co-related improvements in connection therewith will prove of immense value to South Baltimore.

The Ordinance of Estimates for 1913 appropriations carried an amount of $25,000 for regrading, repaving and other miscellaneous work incidental to the construction of the Ostend street bridge, necessary in the adjacent streets.

Out of this fund the work mentioned above was done, and in addition a 30-foot street along the south side of the east approach was opened between Howard street and Plum alley to serve the business which would otherwise be hampered by the closing of Plum alley and the present Stockholm street.

In order to provide adequate clearance under the span crossing Howard street the intersection was lowered two feet and Howard street to north and south, as far as change was made, was repaved with granite blocks, taken from Hanover street, on a six-inch concrete base, as also was Ostend street; both north and south driveways from Howard street to Plum alley.

Work was also begun on the Lee Street Viaduct. The Vang Construction Company of Cumberland, Md., contracted the work on the two approaches in Creamer alley and Little Greene street. The American Bridge Company erected the steel work of the bridge spans and the McLean Construction Company executed the concrete work and the granite block paving in the driveway, and the reinforced concrete footway suspended on brackets along the south side of the bridge.

In general design, the spans and approaches are similar to those on Ostend Street Bridge described above. The work on this structure has proceeded expeditiously, and provided favorable weather prevails will be completed about January 15, 1914.

In addition to checking the plans and making adjustments, arising on account of the construction for which the city was responsible, this Division maintained active inspection of the field work.

The resultant work on both these structures was creditably executed and is of pleasing workman-like appearance. Plans were approved for the construction of the Cross Street Viaduct also, which is to be built on the north side of the street, from Sharp street to Warner street.

The grade of this structure, as laid down in Ordinance No. 387, calling for a rate of grade of 4 per cent. on the approaches, entailed so much costly reconstruction of existing streets in order to provide adequate clearance at Howard and Eutaw streets, that it was deemed advisable to increase the rate of grade to a maximum of 5 per cent. A new grade was accordingly adopted and validated by passage of a new ordinance, No. 320, approved July 16, 1913.

The Baltimore and Ohio Railroad Company are ready to proceed with the construction along these lines, and only await certain legal adjustment, involving the securing to owners of property involved, resultant damage thereto.

INSPECTION AND MAINTENANCE OF IMPROVED PAVEMENTS UNDER GUARANTEE.

The rapid increase in number of improved pavements under guarantee by recent construction activities of this Department, the Paving Commission and the Commissioners for Opening Streets have greatly increased the work herein involved, and compels clearer definition of policy as to many points involved.

One of the most material questions involved is the question of responsibility for failure of pavements within the area of the tracks of the United Railways and Electric Company. The presence of the tracks and their form of construction with inadequate foundation and drainage is undoubtedly the cause of serious damage in many cases within and outside the railway area.

The failure of guarantors to comply promptly with notification to restore areas opened by authority of permits or made necessary by failure, should be corrected at once and some penalty imposed for failure to comply with the terms of their contracts in this respect.

A large percentage of the work made necessary by failure, and which should be restored by the guarantors, is now of necessity executed by the forces of this Department and the cost billed against them. The collection of the bills for this work should be pushed and the liability of the bonds for the amounts discovered promptly. Any contractor persistently failing to comply with the terms of the contract in this respect should be declared an irresponsible bidder.

I desire again to recommend that a stringent specification be adopted controlling the backfilling of trenches, and that more efficient inspection be provided to compel compliance at the expense of the agency making the opening.

On January 1, 1914, the pavements under guarantee and in the control of this Department constituted 1,374,532.8 square yards with a total length of 64.99 miles, as against 851,427.46 yards with a length of 39.32 miles on January 1, 1913.

During the year the guarantee expired on 216,847 square yards with a mileage of 8.68. The amount received for maintenance from all sources during the year was 739,952.34 square yards with a length of 34.35 miles.

Grade Establishments.

Following is a statement of expense of establishments and re-establishments:

Appropriation		$5,000 00
Amount paid by applicants for establishments		1,783 02
		$6,783 02

Expenditures.

Amount paid City Surveyor	$4,027 00	
Amount paid for advertising	658 93	
Rebates on bills rendered	57 86	
Labor, as per pay roll	632 00	
Grade book and stationery	99 00	
		5,474 79

Grade establishments to the number of 255 were requested by this Department, checked upon receipt from City Surveyor, the profiles plotted and records completed.

The number of squares established was 427 and the total length equals 25.87 miles.

As evidenced again this year, a source of much expense to the city and to innocent abutting property-owners involved, is the legal insufficiency of the existing laws to cover cases where owners develop property and entirely disregard grade establishments in cases of private streets. Legislation should be enacted compelling compliance with grades as established.

The city should also refuse to permit installation of conveniences until streets are properly graded in conformity with the recorded established grade. I would recommend that when the construction of a new street is finished, the grade be immediately established legally in agreement with the work as built, if there has never been an establishment made, and if the design of the street departs from an existing grade, a re-establishment should be requested. This is, in my opinion, essential to safeguard the city's rights and validate action taken to compel property-owners to adjust footways.

If this policy is not adopted now and existing discrepancies adjusted, the grade records of this office will eventually be invalidated in many cases, and can only be used with extreme uncertainty for a reference or for design of structures to be erected along streets affected. The cost involved is small, and I think any agency or interests should be required to comply as outlined above and also assume the expense of establishment.

MUNICIPAL GARAGE.

The management of the garage was recently delegated to this Division, and a scheme is being formulated looking forward to an economical and efficient administration.

It is intended to perform all the ordinary repairs at the garage and by careful inspection and prompt attention to maintain the cars so as to afford highest efficiency of operation.

The reduction in cost of supplies, accessories, materials, etc., together with the reduction in number and cost of repairs and added efficiency and availability of the cars, is expected to demonstrate conclusively the wisdom of the establishment of the garage.

The garage located at rear of the old Polytechnic Institute building, at 311 Courtland street, is equipped with ample and modern appliances, and is adequate for the cars, sixteen in number, belonging to the various departments which are now cared for there.

The present organization consists of a superintendent in charge, one washer, one polisher and a general assistant as helper on repairs, etc. When the contemplated alterations are undertaken by the Inspector of Buildings to the old school buildings, I desire to recommend that the open yard areas on north and south sides of the building in which the garage is located be covered by spanning their width without any intermediate supports, so as to provide additional space and that the entire area be regraded and repaved with concrete floor.

The policy of having the more extensive repairs made at the machine shop of the Water Department will be continued, as there is not a sufficient amount of this work to justify the more extensive organization necessary only at intervals at the garage.

If future observation disproves this, the enlargement of our repair facilities will be recommended. The cost of work done at the Water Department's machine shop will be authorized by the various departments upon recommendation of the superintendent of the garage, and billed directly against the Department, a copy of the bill being sent to this Department for the purpose of compiling a maintenance statement showing the cost of operation, etc., of the various cars, and their comparative efficiency.

All other charges, including direct and overhead, investment and depreciation, will be billed monthly against the departments.

The expenditures will be charged to account of Private Paving and Inspection as a medium for transfer. There should, however, be some fund to which charges not assessable against the departments can be charged to.

PRIVATE PAVING AND INSPECTION.

To this account was charged all expense of repaving over cuts made in improved pavements under guarantee under authority of permits issued by this Department and all other work where deposits were made by applicants for permits, also where work was done for private parties and the cost to be billed against them.

The account shows a surplus of credit largely due to the new paving rate charge of six dollars per square yard. The charges made against the account during the year were $6,723.15, and the credit invoices amount to $8,071.33.

REGRADING, REPAVING, ETC., OF HOWARD, OSTEND AND EUTAW STREETS.

This appropriation, amounting to $25,000, was provided in the 1912 Ordinance of Estimates to cover costs to city of work incidental to the construction of the Ostend Street Bridge by the Baltimore and Ohio Railroad Company under terms of the Ordinance No. 387, approved August 16, 1909.

This Division expended for grading Ostend street, between Plum alley and Warner street, inspection of construction work and other incidentals, $2,579.31.

Other expenditures from this appropriation were made by the Repair Division of this Department.

EXPENDITURES.

Labor, as per pay roll	$1,536 00
Developing and printing photographs	14 70
Blue prints	24
Surveys, marking lines, etc.	16 00
Excavating on Ostend street	911 67
Cleaning cesspool	78 40
Renewing service at No. 504 West Lee street	22 30
	$2,579 31

PAVING AND REPAIRING CROSS STREETS.

Certain charges were made against this account, of which the following is a statement:

STATEMENT OF EXPENDITURES.

Concrete protection to members of Calvert Street Bridge	$465 95
Hauling	19 05
Labor, as per pay roll	467 00
Lumber	350 94
Stone crushing	541 21
	$1,844 15

CITY FORESTER EXPENSE.

A frame building was erected to serve as a store and tool house and a field headquarters on the Mount Royal storage lot. The work was done by forces of this Division and charged to above fund. Amount expended, $333.90.

ENCASEMENT WITH CONCRETE MEMBERS OF FLOOR SYSTEM OF CALVERT STREET BRIDGE 145-FOOT 10-INCH SPAN.

On account of the inability to protect the bridge by painting, from the corrosive action of gases emanating from engine stacks on the tracks of the Pennsylvania Railroad below, it was decided to provide permanent protection to the essential members of the floor system by covering them with a protective coating of reinforced concrete.

Plans were made and specifications drawn providing for a covering of 1½ inches of reinforced concrete to be applied to the transverse floor beams and the suspending hangers of the 145-foot 10-inch bow-string truss span. An appropriation of $7,000 had been provided this year for this purpose.

On August 22, a contract was made with the David M. Andrew Company for the work at a price of $1.25 per square foot. This Company sub-let the job to the New York Cement Gun Company. The work was executed in a workmanlike manner by them, using their patented process based on the "Cement Gun."

The ironwork was first thoroughly cleaned, then after being wrapped with a wire mesh spaced about one inch from the metal surfaces, the "Gunite" was applied by the "Gun" in such a manner as to insure maximum density of concrete and insure perfect adhesion to the iron surface. This method was highly satisfactory, and with the application of a water-proofing compound (min-wax) to the surface, I am confident, insures the exclusion of all moisture and will serve as a permanent protection to the iron.

The result of the work will be to extend indefinitely the life of the structure, which was otherwise doomed to destruction.

I desire to recommend the further application of this method of protection to certain of our city bridges, which are being jeopardized by presence of similar corrosive agencies as exist at Calvert Street Bridge. The entire appropriation was expended for the work.

Maintenance of Bridges and Culverts.

The appropriation for 1913 for this account was $18,000, which being inadequate for the work planned, was augmented by transferring on September 5, $7,000 from the Emergency

Fund. The principal items of work done and charged to this appropriation were as follows:

Franklin Road Culvert.

A new culvert was erected on Franklin road, just east of the Western Maryland Railroad Company's right-of-way, to provide adequate water way for small stream crossing at this point. It was of the box type with an opening four feet by six feet in size and a length of forty-one feet three inches, having plain concrete headwalls and side walls and reinforced slab covering. Inlet gratings were placed in gutter lines at north and south sides.

Cedar Avenue Bridge.

The entire deck of this bridge was reconstructed, including new under and top floor of driveway and reconstruction of both footways with the best of the lumber taken from the driveway. Under floor is of two-inch and top floor three-inch Georgia pine.

Rayner Avenue Culvert Over Gwynn's Run.

A concrete retaining and parapet wall was erected at the south building line of the street to relieve a dangerous condition existing on the footway, and to protect the end of the arch barrel, which was considerably weakened.

A short wall was also erected on the north footway to hold up footway, and general repairs made to old masonry.

St. Paul and Calvert Street Bridges.

The old gas-lighting systems on these two bridges were expensive and inadequate. Plans were made and specifications drawn providing for wiring and installation of incandescent multiple arc system with time switches, allowing for reduction of lights at will and providing automatic control. Lights were placed on the existing posts at ends of trusses, and on viaducts and some of the rosette bases at panel points on the trusses designed to conceal connections and to add ornamentation were converted and lights here located. Immense improvement resulted in illumination as well as in the general appearance of the structures.

On September 13 a contract was made with the Kingsbury Samuels Electric Company for the work at a cost of $2,050 for St. Paul Street, and $1,750 for Calvert Street Bridge, with an amount of $80 deducted as per terms of their proposal for the awarding to them of the work on both bridges. The work on both bridges is practically finished, except for a few finishing details.

The ironwork of the Calvert Street Bridge, below the floor level, was repainted and extensive repairs made to the ironwork which was in bad condition. Ten new floor beams hangers were put in at the south end of the long span as the old ones were so badly corroded and weakened as to be dangerous. A portion of the cost of concrete encasement of floor system members was also charged to this account.

Wilkens Avenue Bridge Over Gwynn's Falls.

The top and under floors of this bridge were almost entirely renewed.

Maryland Avenue Bridge Over Jones Falls.

The old wooden deck construction of the east driveway was entirely reconstructed. Steel "I" beams were substituted for the old wooden stringers in driveway, including railway area, and an oak-block wearing surface four inches thick was laid on a three-inch Georgia pine underfloor. The blocks were grouted with bitumen filler. The United Railways and Electric Company substituted a new seven-inch girder grooved rail for the old rail. The Railways Company bore the cost of the paving within their area.

A new reinforced concrete slab, three inches thick, supported on encased steel "I" beams was substituted for the old wooden footway on the east side, including a six-inch reinforced concrete curb at roadway side.

The entire top floor of the Brunswick Street Bridge over Gwynn's Falls, at entrance to Union Stock Yards, was relaid with three-inch Georgia pine plank, and the footway was rebuilt.

The ironwork of the Lombard Street Bridge over Jones Falls was painted throughout with red oxide of iron paint, covered with a black composite base in linseed oil paint.

The footways were entirely rebuilt, and considerable work of a miscellaneous character done in addition.

All the ironwork of the Columbia Avenue Bridge over Gwynn's Falls was painted with two coats of Aetna iron paint. The footways were completely reconstructed, and other repairs made to roadways and hand-rails.

When the Fallsway work required the removal of the bridges at Lexington and Baltimore streets, and no satisfactory offer had been secured for the ironwork contained in them, it was deemed advisable to retain same with a view to future use by this Department, or to await an opportunity to dispose of them at a price commensurate with their value as fabricated members. Accordingly, this steel work was stored on the Nanticoke street lot.

The track area of the Edmondson Avenue Bridge over the Philadelphia, Baltimore and Washington Railroad Company's tracks was entirely rebuilt; new stringers of 12-inch by 12-inch Georgia pine were installed. Other repairs to roadways and footways were also made.

An incandescent lighting system on ornamental iron posts was installed on the new concrete bridge on Harford road over Herring Run.

The hand-rails of the North Avenue Bridge were painted, after being thoroughly cleaned, with one coat of red oxide of iron paint and a cover coat of Lowe Brothers' Black Metalcote.

The four corners of the head-walls of the Wilkens Avenue Culvert over Gwynn's Run were showing signs of failure and were underpinned and secured.

The head-walls of the Wilkens Avenue Culvert over Maiden Choice Run were extended in order to support the footways properly.

The roadway and footway floors of the Argyle Avenue Bridge were entirely relaid and concrete retaining walls erected at the north and south ends of the bridge.

Also various repairs were made and painting in part on bridges and culverts, other than those here mentioned, expending amounts varying from $5 to $500 on each as is shown in the tabulated statement following.

MAINTENANCE AND REPAIRS OF BRIDGES AND CULVERTS.

The work done during the year on the different bridges is given below:

Argyle Avenue Bridge.

The roadway floor of this bridge was renewed, and the best of the material taken from same used to repair sidewalks. A cement retaining wall was built on the north and south ends of bridge across roadway portion.

Charged to—

Maintenance of bridges and culverts	$223 06
Repairs of roads and streets	653 42
	$876 48

Brunswick Street Bridge.

The top roadway floor of this bridge was renewed and the best of the material removed from same was used to repair footway, also minor repairs to hand and guard railing.

Charged to—

Maintenance of bridges and culverts	$108 50
Repairs of roads and streets	1,085 16
	$1,193 66

Calvert Street Bridge.

Painted iron work under floor as follows:

Eight panels south of south pier, of 145-foot 10-inch span, painted with two coats Aetna iron paint; also shutters removed, cleaned and painted and replaced on this portion. The five panels south of the above eight were touched up in places where corrosion was bad, and then the entire surface covered with one coat of Aetna iron paint.

South Span—Painted two panels over railroad tracks with two coats of Aetna iron paint. The portion north of the north pier of the 145-foot 10-inch span was painted with two coats of Aetna iron paint.

One hundred and forty-five foot ten-inch Span—All the shutters in the span were removed, including four-foot end brackets; also sheet iron under lower chord removed and chords cleaned and painted. The buckle plates in this span were cleaned and touched up where same had been splashed with cement. Two holes were cut in the lamp pedestal on the southwest corner of the 145-foot 10-inch span. Removing all ornamental ironwork from beside lamp posts on both spans, cleaning and painting iron underneath same, also putting on 18 angles beside lamp posts where logs were broken off.

It was found that 10 of the hangers suspending the transverse floor beams on the 145-foot 10-inch span were diminished in cross-section, and before encasing same in concrete it was necessary to renew them. This work was done by the Chesapeake Iron Works.

Charged to—

Paving cross streets and repairs of roads and streets....	$1,330 03
Maintenance of bridges and culverts......................	2,386 11
	$3,716 14

Baltimore Street Bridge Over Jones Falls.

The Fallsway construction eliminated this bridge this year, and the steel work was hauled and stored for future use or sale.

Charged to—

Maintenance of bridges and culverts......................	$723 32

Centre Street Bridge.

On account of the Fallsway it was necessary to remove this bridge. This Department superintended the removing of same and disposition of old materials.

Charged to—

Maintenance of bridges and culverts......................	$43 20

Charles Street Bridge.

Minor repairs were made.

Charged to—

Maintenance of bridges and culverts......................	$0 75
Repairs of roads and streets..............................	3 60
	$4 35

Clarkson Street Box Drain.

In order to remove a source of nuisance due to defective drainage, the bed of Clarkson street was filled in between Dickman and Moale streets and a box drain was constructed to provide waterway for an existing drainage channel.

Charged to—

Maintenance of bridges and culverts	$16 12

Calvert Street Bridge.

A new incandescent electric lighting system was installed to take the place of the old gas lamps under contract with the Kingsbury-Samuels Electric Company. The following amount was expended on the partially completed contract:

Charged to—

Maintenance of bridges and culverts	$1,059 57

Caton Avenue Culvert.

Repairs to hand railing.

Charged to—

Maintenance of bridges and culverts	$37 18

Cedar Avenue Bridge.

The top and under floor of the roadway of this bridge was renewed and the best of the material removed used to repair the footways; minor repairs were made to the hand and guard rails.

Charged to—

Maintenance of bridges and culverts	$2,742 52
Repairs of roads and streets	16 00
	$2,758 52

Chase Street Bridge.

The ironwork under floor was cleaned on the second panel from east abutment all the way across bridge over the tracks of the Western Maryland Railroad, and painted with two coats of iron oxide and one coat of Metalcote. The third and fourth panels east of middle pier over Pennsylvania Railroad tracks were cleaned and painted with two coats of iron oxide and one coat of Metalcote. Minor repairs were made to roadway and footway.

Charged to—

Maintenance of bridges and culverts	$179 48
Repairs of roads and streets	296 24
	$475 72

Clipper Mill Foot Bridge.

Put in additional new stringer, entire length of bridge, and made other necessary repairs to floor and steps.

Charged to—

Maintenance of bridges and culverts	$42 65

Columbia Avenue Bridge.

Painting ironwork above and below floor with two coats of Aetna iron paint, putting in 4½-inch old curb header on west end of east and west driveways, and repairing wood block adjoining same. Repairs to hand railing, one new iron post on the southeast corner of bridge and repairing two posts on the north side with two wrought-iron straps over the tops of same, where they were cracked.

Charged to—

Maintenance of bridges and culverts	$1,358 79
Repairs of roads and streets	55 38
	$1,414 17

Cribbing at Twenty-third Street and Huntingdon Avenue.

On account of flow from street inlets at this point washing out the footway, a wooden cribbing was erected to make same safe.

Charged to—

Maintenance of bridges and culverts	$212 92

Edmondson Avenue Bridge Over Gwynn's Falls.

Cleaning expansion joints between coping blocks on top of parapet wall. It was necessary to reset many of the blocks in order to open up these joints. A fill of approximately 400 cubic yards of earth was made at the northwest corner of bridge to replace embankment washed out.

Charged to—

Maintenance of bridges and culverts	$30 96
Repairs of roads and streets	223 94
	$254 90

Edmondson Avenue Bridge Over Pennsylvania Railroad.

New 12 by 12 stringers were laid under United Railways tracks, including top and bottom floor in railway area, concrete retaining wall on east and west end of bridge entire width of railway area, repairs to guard rail and dummy. Repairs were also made on south driveway, including renewing under-floor where necessary, and replacing wood block over same.

Charged to—

Maintenance of bridges and culverts	$324 34
Repairs to roads and streets	358 45
	$682 79

Falls Road Bridge.

Painting iron floor beams and repaired roadway floor.

Charged to—

Maintenance of bridges and culverts	$73 14

Franklin Road Bridge Over Gwynn's Falls.

This bridge had formerly been painted with Aetna iron paint, which was scraped off down to the iron, both above and under floor. Two coats of Lowe Brothers' Red Oxide of Iron Paint and one coat of Black Metalcote paint was then applied.

Charged to—

Maintenance of bridges and culverts....................	$657 04
Repairs to roads and streets..........................	19 03
	$676 07

Franklin Road Culvert, East of Western Maryland Railroad.

A new concrete culvert was erected on Franklin road, east of the Tide Water Division of the Western Maryland Railroad. This culvert is of the box type and extending the entire width of the roadway, 41 feet 3 inches. Waterway opening is 24 square feet, side and end walls are plain concrete, and cover-slab is of reinforced concrete.

Charged to—

Maintenance of bridges and culverts....................	$1,845 80
Paving cross streets and repairs to roads and streets......	174 05
	$2,019 85

Hamburg Street Bridge.

When this bridge was constructed under the terms of Grade Crossing Elimination Ordinance No. 387, of August 16, 1909, the footway 10 feet in width along the south side of the structure was supported on a line of columns placed along the south building line of Hamburg street. This created an open area in front of the houses varying in height from a few feet to the full heighth of the bridge, which was a source of nuisance and an encouragement to crime. To correct this condition, it was decided to erect curtain walls enclosing the areas so as to prevent accumulation of filth and access thereto. The work was done by forces of the Repair Division.

Charged to—

Maintenance of bridges and culverts......................	$1,439 70

Harford Avenue Bridge Over Herring Run.

A new lighting system was installed on this bridge, including latest improved incandescent lights, time switch, etc. Other minor repairs were made to catch-basin gratings.

Charged to—

Maintenance of bridges and culverts......................	$607 83

Harmon's Bridge.

Minor repairs were made to this bridge, including the renewing of twelve bent posts and repairs to roadway, etc.

Charged to—

Maintenance of bridges and culverts......................	$238 38
Repairs to roads and streets............................	28 00
	$266 38

Latrobe Park Footbridge.

As described in report for 1912, a new footbridge was erected, crossing the tracks of the Baltimore and Ohio Railroad Company in Claggett street, at the southwest corner of Latrobe Park. The cost of the structure was charged and reported in 1912, except on account as below, which was remaining cost of steelwork erected by Dietrich Brothers of this city.

Charged to—

Maintenance of bridges and culverts......................	$480 00

Lexington Street Bridge.

On account of the Fallsway it was necessary to remove this bridge, its removal being superintended by this Department, and hauling and storing of ironwork charged as below.

Charged to—

Maintenance of bridges and culverts	$188 42
Repairs to roads and streets	21 50
	$209 92

Garrison Lane Culvert, South of Pennsylvania Railroad.

Work done on this culvert included a concrete slab on the east end, the same to act as a retaining wall for the road; also other minor repairs such as drain pipe and repairs to hand railing.

Charged to—

Maintenance of bridges and culverts	$63 50

Jenkins Lane Bridge.

As this bridge formerly had one floor of two-inch material, on account of increased traffic of heavy teams, we deemed it necessary to lay another floor of three-inch material over the present floor.

Charged to—

Will appear in the report for 1914.

Lee Street Bridge.

Lamp posts were provided for the incandescent lighting system on the east and west approaches.

Charged to—

Maintenance of bridges and culverts	$42 05

Light Street Footway.

This footway was replaced with an entire new structure, the length of same being 735 feet long by 3 feet wide, including hand railing and guard railing on the roadside.

Charged to—

Maintenance of bridges and culverts.................... $1,386 43

Lombard Street Bridge.

Painting ironwork under floor with two coats iron oxide; top, including hand railing, painted with one coat iron oxide, and one coat of Lowe Brothers' Black Metalcote. A concrete retaining wall was erected at east and west end of both footways. All new stringers were put in under both footways, and new floor laid where necessary. Minor repairs were made to hand railing and other ironwork of bridge.

Charged to—

Maintenance of bridges and culverts.................... $1,210 61

Madison Street Bridge.

This bridge was removed on account of the Fallsway construction. This Department superintended the removing of same, including the checking of iron sold as junk and hauling lumber.

Charged to—

Maintenance of bridges and culverts...................... $22 75

Maryland Avenue Bridge.

The east driveway of this bridge was improved by removing the wooden stringers which supported the roadway and replacing same by steel "I" beams, including the railway area; also paving same with white oak blocks with bitumen-poured joints. The wooden east footway was replaced by a reinforced concrete footway, supported on steel "I" beams, three inches in thickness. Oak block paving of roadway is laid on a three-inch Georgia pine under-floor.

Charged to —

Maintenance of bridges and culverts	$1,193 53
Paving cross streets	786 14
	$1,979 67

Miscellaneous Account Tool and Supplies.

Various tools, supplies, etc., were purchased, and work done not chargeable to any specific bridge. Inspection was also periodically made of all bridges, the expense of which was:

Charged to—

Maintenance of bridges and culverts	$1,033 68
Repairs of roads and streets	3 00
	$1,036 68

Miscellaneous Surveys, Blue Prints, Etc.

Not chargeable to any definite individual account. Total expenditures to this account were:

Charged to—

Maintenance of bridges and culverts	$37 40

Montpelier Street Culvert.

A portion of the old hand-rail taken from the Lexington Street Bridge over Jones Falls was placed on the Montpelier Street Culvert.

Charged to—

Maintenance of bridges and culverts	$71 19

Monument Street Bridge.

This bridge was removed on account of the Fallsway construction. This Department superintended the removing of same, including the checking of ironwork sold as junk and hauling lumber.

Charged to—

Maintenance of bridges and culverts	$15 69
Repairs to roads and streets	58 63
	$74 32

Mount Vernon Avenue Bridge.

A portion of the top floor and guard-rail was repaired, also minor repairs to piers and drainage underneath of bridge was readjusted to prevent scour around foundations.

Charged to—

Maintenance of bridges and culverts	$23 70
Paving cross streets and repairs to roads and streets	204 50
	$228 20

North Avenue Bridge.

Painting hand-rail one coat iron oxide, and one coat Metalcote; also repairs to hand-railing.

Charged to—

Maintenance of bridges and culverts	$585 96

North Monroe Street Bridge.

Minor repairs to top floor of driveway and footways.

Charged to—

Repairs to roads and streets	$0 69

Old Liberty Road Culvert.

Repairs to guard-rail along both sides of road.

Charged to—

Maintenance of bridges and culverts	$43 66

Rayner Avenue Culvert.

A concrete parapet wall was built on the south side of this bridge; also repairs on the north spanded wall, including fence on north and south side and reinforcing inside of arch along water line the entire length of culvert.

Charged to—

Maintenance of bridges and culverts	$2,051 98
Repairs to roads and streets	6 00
	$2,057 98

Sales of Old Material.

An amount of old iron "I" beams taken from one of the bridges was sold, and following is cost of hauling same to load on cars.

Charged to—

Maintenance of bridges and culverts	$14 70

Slingluff Avenue Bridge.

The ironwork was painted with two coats of oxide of iron paint.

Charged to—

Maintenance of bridges and culverts	$11 00

Reese Street Bridge.

Repairs to guard-rail, including extension of same.

Charged to—

Maintenance of bridges and culverts	$25 36

South Monroe Street Bridge.

Erecting name tablet and minor repairs, including painting and hand-rail.

Charged to—

Maintenance of bridges and culverts	$167 38
Repairs to roads and streets	16 81
	$184 19

St. Paul Street Bridge.

The installation of electric lights by the Kingsbury-Samuels Electric Company under contract. This includes an up-to-date incandescent system, including time switch, etc., in the place of the old gas system which was expensive and unsightly. Minor repairs were also made to ironwork, etc.

Charged to—

Maintenance of bridges and culverts	$796 03
Repairs to roads and streets	5 50
	$801 53

Thirtieth Street Culvert.

Repairs to guard-rail and other minor repairs.

Charged to—

Maintenance of bridges and culverts	$67 05

Union Avenue Bridge.

Minor repairs were made to the south sidewalk of this bridge.

Charged to—

Maintenance of bridges and culverts	$11 48

University Parkway Bridge Over Stony Run.

The cement sidewalk on the southeast end of this bridge was extended, also repairing a portion of the north side near the east end.

Charged to—

Maintenance of bridges and culverts	$12 30
Repairs to roads and streets	81 06
	$93 36

Wilkens Avenue Bridge Over Gwynn's Falls.

The top and bottom roadway floor of this bridge was renewed.

Charged to—

Maintenance of bridges and culverts	$388 14
Repairs to roads and streets	1,177 99
	$1,566 13

Wilkens Avenue Culvert Over Gwynn's Run.

The parapet walls of this bridge were underpinned on all four corners, including considerable amount of filling in and grading around same.

Charged to—

Maintenance of bridges and culverts	$652 86

Wilkens Avenue Culvert Over Maiden Choice Run.

Rubble masonry retaining walls were added at four corners, extending the present head-walls sufficiently far to support footways.

Charged to—

Maintenance of bridges and culverts	$203 28

MAINTENANCE OF BRIDGES AND CULVERTS

REPORT OF

J. U. ISAACS, *Assistant Engineer*

SUB-DIVISION OF SEWERS

Report of J. U. Isaacs, Assistant Engineer
1913

BALTIMORE, January 15, 1914.

MR. H. K. MCCAY, *City Engineer.*

DEAR SIR—I beg to submit the following report of the work done by the Sewer Division during the year 1913:

NEW DRAINS.

The length of new drains laid in 1913, exclusive of inlet connections, was 5,630.5 feet; the length of such connections being 785 feet.

In addition to this, in connection with the work of installation of new inlets, the change of location of old inlets and the general repair work of the Division, there was laid 3,294 feet of drain pipe of sizes between 12-inch and 24-inch diameter.

Under the head of New Drains the following work was done during the year 1913:

Lateral Drain in Gorsuch Avenue.

Eighteen-inch double strength vitrified pipe, extending from inlet at northeast corner Greenmount and Gorsuch avenues, eastward in north footway of Gorsuch avenue to manhole at northwest corner Gorsuch avenue and Old York road, a distance of 240 feet.

Side inlets were constructed on northwest and northeast corners of Gorsuch avenue and Old York road. Total cost of work, $1,189.25. Charge: Improvements in and Additions to the Drainage System.

Lateral Connection to Stockholm Street Drain.

Twelve-inch vitrified pipe, connecting with main drain on Stockholm street, about 50 feet west of Scott street; thence southerly in 10-foot alley 100 feet; thence westerly in 10-foot alley to Wicomico street. Seven connections, draining the yards of houses Nos. 857 to 875 Stockholm street, were installed. This work was made necessary on account of regrading and repaving of the alley parallel to Stockholm street. Total cost of work, $1,013.42. Charge: Account Paving Private Alleys, $846.18; Improvements to and Additions to Drainage System, $167.24.

Lateral Drain in Brentwood Avenue.

Twelve-inch vitrified pipe, connecting with inlet on northeast corner Biddle street and Brentwood avenue, running northerly in east footway of Brentwood avenue to first alley north of Biddle street, a distance of 97 feet.

Two grating inlets were installed at the alley north of Biddle street and the existing Sewerage Commission inlet at the northeast corner of Biddle street and Brentwood avenue entirely reconstructed. Total cost of work, $411.27; work done in 1912, $150.84; work done in 1913, $260.43. Charge: Private Paving and Inspection, $209.43; Improvements and Additions, $51.

Reconstruction of Sanitary Sewer in Moses Alley.

Eight-inch vitrified pipe, connecting with 12-inch drain in Granada avenue at south building line of Fernhill avenue; thence southerly 125 feet to manhole at intersection of Moses alley; thence easterly in Moses alley. Total distance, 477 feet. Nine six-inch house connections were constructed to this drain. This work was made necessary on account of the regrading of Moses alley by the Commissioners for Opening Streets. Total cost of work, $534.63. Charge: Private Paving and Inspection, account of Commissioners for Opening Streets.

Lateral Drain in Walbrook Avenue and Hilton Street.

Eighteen-inch double strength vitrified pipe, connecting with 24-inch terra-cotta drain in Walbrook avenue, about 200 feet west of Hilton street; thence easterly in Walbrook avenue to Hilton street; thence northerly in Hilton street to manhole at Windsor Mill road.

Fifteen-inch double strength vitrified pipe in Hilton street, from manhole at Windsor Mill road northward to Clifton avenue. Total distance, 602.5 feet. Two side inlets were constructed on northeast corner Hilton street and Clifton avenue; one "F" grate inlet on the northeast corner of Hilton street and Windsor Mill road, and one combination grate and inlet on the northeast corner of Hilton street and Walbrook avenue.

Four manholes and 62 feet of 15-inch inlet connections were also constructed. Total cost of work, $1,938.18. Charge: Private Paving and Inspection, account of Commissioners for Opening Streets.

Extension of Drain in Westwood Avenue.

Eighteen-inch double strength vitrified pipe in Westwood avenue, from manhole at Rosedale street, Westwood to manhole at Windsor Mill road, a distance of 150 feet.

Fifteen-inch double strength vitrified pipe, from manhole at Westwood avenue and Windsor Mill road to inlet at southwest corner, a distance of 16 feet.

Twelve-inch vitrified pipe in south footway of Westwood avenue, between Windsor Mill road and Ellamont street.

Two manholes, three side-inlets, two grate-inlets, 112 feet of 15-inch inlet connections, and 24 feet of 12-inch inlet connections were constructed. Total cost of work, $1,138.45. Charge: Private Paving and Inspection, account of Commissioners for Opening Streets.

Lateral Drain in Thirty-ninth Street.

Fifteen-inch double strength vitrified pipe, connecting with 18-inch terra-cotta drain on Thirty-ninth street, between Oak street and University Parkway; thence running easterly in Thirty-ninth street to Oak street, a distance of 462 feet.

Three manholes, four side-inlets and 132 feet of 12-inch inlet connections were constructed. Total cost of work, $1,734.15. Charge: Private Paving and Inspection, account of Commissioners for Opening Streets.

Extension of Drain in Reisterstown Road.

Forty-two inch concrete pipe, connecting with main drain at Orem lane and Reisterstown road; thence southerly along west side of Reisterstown road to manhole at Ruskin avenue; thence westerly, emptying in open ditch at a point about 175 feet west of Reisterstown road. Total length of 417 feet.

One manhole and two concrete and brick curves, each 33 feet in length, were constructed. Total cost of work, $3,066.85. Charge: Private Paving and Inspection, account of Sewerage Commission, $2,717.20; Improvements in and Additions to the Drainage System, $349.65.

Extension of Drain in Cedar Avenue.

Twenty-inch double strength vitrified pipe, connecting with existing manhole located in Cedar avenue, about 175 feet north of Thirty-fourth street; thence northerly to manhole at Crisp street.

Eighteen-inch double strength vitrified pipe, from manhole at Crisp street to manhole at north side of Thirty-sixth street.

Fifteen-inch double strength vitrified pipe, from manhole at north side of Thirty-sixth street to manhole at Carwell street.

Twenty-four inch double strength vitrified pipe was laid in Cedar avenue at the intersection of Thirty-fourth street, from existing 20-inch drain in Cedar avenue, eastward in Thirty-fourth street to east building line of Cedar avenue. This is dead-ended at present, but will be used later to divert the drainage eastward in Thirty-fourth street to Stoney Run, and thus relieve the old drain in Cedar avenue, which is now overloaded. Total length of 1,075 feet. Six manholes, five inlets and 96 feet of inlet connections were constructed in conjunction with this work. Total cost, $5,807.17. Charge: Private Paving and Inspection, account of Commissioners for Opening Streets, $5,293.51; charge: Improvements and Additions to Drainage System, $34.24; Repairs of Sewers, $479.42.

Lateral Drain in Charles Street.

Fifteen-inch and 12-inch vitrified pipe in Charles street, at intersection of Thirty-fourth street, connecting with 24-inch drain in west footway of Charles street, and thence running around the Hopkins Oval for a distance of 552 feet. Two manholes and 15 grate-inlets were constructed for this work. Total cost of work, $1,752.82. Charge: Private Paving and Inspection, account of Roland Park Company, $557.29; account of Johns Hopkins University, $557.29. Charge: Improvements in and Additions to Drainage System, $638.24.

Lateral Drain in Thirty-eighth Street.

Fifteen-inch double strength vitrified pipe in Thirty-eighth street, between Falls road and Hickory avenue, a distance of 307 feet.

Eighteen-inch double strength vitrified pipe, connecting with 24-inch drain in Falls road and running eastward to east building line for a distance of 27 feet.

Two manholes, three side-inlets, and one combination inlet were constructued. Total cost of work, $1,841.20. Charge: Private Paving and Inspection, account of Commissioners for Opening Streets, $1,708.12; Improvements in and Additions to the Drainage System, $133.08.

Lateral Drain in Twenty-first Street.

Eighteen-inch double strength vitrified pipe, from existing manhole at intersection of Twenty-first street and Hargrove alley; thence easterly in Twenty-first street a distance of 49 feet. This work was abandoned at this point, and later picked up by Sewerage Commission and extended to Calvert street. Cost, $401.73. Charge: Improvements in and Additions to the Drainage System.

Lateral Drain in Patterson Park Avenue.

Twelve-inch vitrified pipe, from main drain in Orleans street, and thence southerly in west footway of Patterson Park avenue, a distance of 265 feet. One combination grate and inlet and one side-inlet were constructed in connection with this work. Charge: Private Paving and Inspection, account of Paving Commission, $459.53; Improvements in and Additions to the Drainage System, $206.45; total cost, $665.98.

Completion of Drains in High Street.

The work of constructing drain and connections in High street, between Hillen and Front streets, was started in 1912 and completed the early part of this year. This work was authorized by the Western Maryland Railroad Company and the cost of this work was borne by them. Total cost of work, $1,353.42; work done in 1912, $1,246.77; work done in 1913, $106.65. Charge: Private Paving and Inspection, account of Western Maryland Railroad.

Low Street, Between Front Street and the Fallsway.

Two side inlets with connections and one manhole were constructed in Low street, between Front street and the Fallsway, to drain the sump formed by the regrading of Low street. Total cost of work, $627.55. Charge: Improvements in and Additions to the Drainage System.

Drain for Municipal Garage.

The surface drainage of the Municipal Garage was provided for by the construction of an eight-inch vitrified pipe drain, with connections to the rain leaders and area of the building in Hargrove alley west of St. Elizabeth's Court, a distance of 180 feet. Total cost of work, $210.23. Charge: Improvements in and Additions to the Drainage System.

RECONSTRUCTION AND REPAIR.

McMechen Street Sewer.

The old wooden invert in the McMechen street sewer, between Jordan alley and Bolton street, for a distance of 256 feet, was removed and replaced by one of vitrified blocks laid in cement mortar on a cinder concrete base, and the side walls and arch plastered with cement mortar. Total cost of work, $1,264.95. Charge: Repairs of Sewers.

Chatsworth Run Sewer.

The old wooden invert in the Chatsworth Run sewer in the bed of Myrtle avenue, between George and Greenwillow streets, for a distance of 325 feet, was removed and replaced by one of vitrified blocks laid in cement mortar on a cinder concrete base, and the side walls and arch plastered with cement mortar. Total cost of work, $1,183.56. Charge: Repairs of Sewers.

Broadway Sewer.

The old cast-iron girder-plates over the Broadway sewer were replaced by a concrete slab, from the intersection of Thames street and Broadway, southward for a distance of 78 feet. Total cost of work, $734.25. Charge: Repairs of Sewers.

Inlets and Minor Sewer Repairs.

Under this head is included all work of repairs to inlets and drains, or work incidental to such repairs, where the cost of such work did not exceed $50.

The cost of such work during the fiscal year was $5,609.29, and the number of locations at which work was done was 319, making an average cost of $17.59 per location. Charge: Repairs of Sewers, $4,764.97; charge: Improvements in and Additions to Drainage System, $844.32.

Inlet Manholes.

Manholes were cut in 65 stone inlet covers and castings fitted to same. Total cost of this work was $634.45, averaging per manhole, $9.76. Charge: Improvements in and Additions to the Drainage System.

Calvert and Baltimore Streets.

At the intersection of Calvert and Baltimore streets a broken private drain belonging to the Emerson Hotel Company caused a large cavity to form through the liquefication of the material of the street bed and the flowing of the same through the drain. Upon the subsequent choking of this drain by the street material, the condition became evident to the Emerson authorities, and this Department was authorized by them to relieve the situation at their expense, and they having since refused payment of the account, the cost of the same is being temporarily carried by the sewer repair account until the attendant litigation is settled. Charge: Repairs of Sewers, $2,403.98.

North and Patterson Park Avenues.

This work consisted of the repair of top and side walls of the drain in North avenue at intersection of Patterson Park avenue, for a distance of 100 feet, also the filling up of cave-in over same. Total cost of work, $429.35. Charge: Repairs of Sewers.

Reconstruction of Manhole at Mount Royal Drive and Newington Avenue.

This manhole, through its faulty original construction, became choked by debris, blowing off the head and damaging the surrounding improved paving for a considerable area. It was necessary to entirely remodel this manhole. Total cost of work, $667.48. Charge: Repairs of Sewers.

New Inlets, etc., and Inlets Reconstructed.

Under this heading was done all work in connection with inlets or inlet connections that could be considered additional to or improvement in the system, as distinguished from minor repairs. The total cost of this work was $13,919.80, and the number of locations where such work was done was 145. Charge: Improvements in and Additions to the Drainage System, $12,484.88; Repairs of Sewers, $1,434.92.

Vicinity of Lexington Market.

On account of the rearrangement of sewer inlets in the vicinity of Lexington Market, it was necessary to repave a considerable area to properly divert the surface drainage. This work was done by the Division of Street Repairs and charged to Improvements in and Additions to the Drainage System. Total cost of work, $1,108.78.

Mondawmin, Roslyn, Carlisle and Bateman Avenues.

The macadam paving over the trenches of the drainage work on the above streets, as well as the remodeling of the intersection to remove the existing valley gutters was done by the Division of Street Repairs and charged to Improvements in and Additions to the Drainage System. Total cost of work, $280.64.

Inlets at Howard and Ostend Streets.

In connection with the lowering of the grade of Howard street, at the intersection of Ostend street, it was necessary to construct new inlets and connections at the northeast and southeast corners, and at the west side of Howard street, opposite the center of Ostend street. Cost of work, $346.05. Charge: Regrading, Repaving, Underpinning Walls on Howard Street, Stockholm Street and Eutaw Street, etc.

WORK DONE FOR OTHER CITY DEPARTMENTS, CORPORATIONS AND PRIVATE INDIVIDUALS.

Under this general head is included the less important work for which no detailed account has been previously given.

Commissioners for Opening Streets.

New drains, new inlets and connections, changing location of old inlets, and extension of old drains, are included under the above head. The total cost of such work done during the fiscal year is $1,520.33, and the number of locations, where such work was done is 23. Charge: Private Paving and Inspection.

Paving Commission.

In connection with the changes of grades and lines of curb, incidental to the paving work of the Paving Commission, inlet and connection work in the nature of changing locations of old inlets and connections, constructing new inlets and connections, narrowing of inlet openings, raising drip-stones, etc., was done in 220 locations at a total cost of $8,905.83. Charge: Private Paving and Inspection.

Water Department.

Changing inlet connection at Park avenue and McMechen street, $191.50; lowering 15-inch terra-cotta drain at Mount Royal avenue and Mosher street, $75.63. Charge: Private Paving and Inspection, $267.13.

Sewerage Commission.

Under this head is included the reconstruction of inlets and connections. Total cost of such work was $1,080.31, and the number of locations where such work was done was 13. Charge: Private Paving and Inspection.

Harbor Board.

Under this head is included the construction of three new inlets and connections, on account of Key Highway. Cost, $314.17. Charge: Private Paving and Inspection.

Electrical Commission.

Changing two inlet connections at Baltimore and Linwood avenue, $146.43. Charge: Private Paving and Inspection.

Northern Central Railway Company.

West side Central avenue, south of Orleans street, new grate inlet and connection	$109 52
Northeast and southeast corners Central avenue and Fairmount avenue, new inlets and connections	127 08
East side Central avenue, north of Lombard street, new inlet and connection	150 51
South side Boston street, opposite Lakewood avenue, two grate inlets and connections	258 73
Central avenue and Jefferson street, new track drain and connection	57 77
Southeast corner Central avenue and Monument street, new grate inlet and connection	178 42
Monument street, between Buren and Forrest streets, four new grates and connections, also changing two inlets	428 75
Northeast corner Central and Eastern avenues, connecting pipe to inlet	44 53
East side Central avenue, north of Eastern avenue, new grate inlet, side inlet and connections	304 94
North side Monument street, between Ensor street and Ajax alley, pipe line, manhole, grate inlet, side inlet and connections	280 42
Total	$1,940 67

Miscellaneous Corporations and Individuals.

Ryan & Reilly Contracting Company, Oak and Twentieth streets, restoring manhole	$5 37
Western Maryland Railroad Company, northwest corner Front and Hillen streets, two new inlets and connections	237 62
Baltimore and Ohio Railroad Company, Pratt street, west of Fremont avenue, new pipe line and side inlet	592 15
Rochester-Kirkness Realty Company, Harford avenue, opposite Clifton Park entrance, remodeling inlet	86 92
United Railways and Electric Company, northeast corner Charles and Saratoga streets, changing inlet	47 44
J. F. Wiessner Brewing Company, Hoffman street and Shields alley, new inlet head	20 15
McCarthy & O'Herron Company, pumping sub-basement of Baltimore Bargain House	8 53
John T. Lewis & Brothers Company, Fayette and Colvin streets, new connections to sewers	9 75
Cowan Building Company, High and Front streets, new pipe line	28 42
Consolidated Engineering Company, East Falls avenue and Granby street, replacing 18-inch pipe	4 50
J. H. McLauchlan Engineering Company, Bay View power house, building shanty for motor	18 82
Total	$3,000 34

Charge: Private paving and inspection, account of above corporations.

MISCELLANEOUS EXPENDITURES.

Inspection and Tests.

Under this head is included the inspection of the work of laying or repairing private drains in the beds of public streets or alleys, excavating test pits to locate the source of drainage or sewerage trouble, and for general information, relieving choked sanitary sewers where damage to valuable property is imminent, and the cost of similar work done by other departments and charged by agreement to this Department. Cost of above work for 1913, $726.40. Charge: Repairs of Sewers.

Machinery Purchased During the Year.

Two single-cylinder motor-cycles and accessories purchased from Reading Standard Company. Total cost, $488.50. Charge: Repairs of Sewers.

Bay View Siding and Coal Conveyer.

This work, which was started in 1912, was completed in January of this year by the erection of the conveyer structure and machinery.

The contractor for this portion of the work was penalized $90 for failure to complete the work in contract time, this amount representing the actual expense of hauling coal during the period of penalty.

In addition to this, the sum of $50 was, by agreement with him, retained to cover the expense of certain changes in the driving gear. This work has been finished and the plant is operating in a satisfactory manner. The capacity of the plant is 30 tons per hour.

STATEMENT OF EXPENDITURES.

Contract of J. H. McLaughlin Engineering Company for conveyer structure and machinery		$3,360 00
Extra work on above contract		158 81
Philadelphia, Baltimore and Washington Railroad Company, completion of track work, including rearrangement of surface drainage		191 75
Dietrich Brothers, screen bars over hopper		74 25
Rittenhouse-Fleury Company, work of alteration of driving gear		60 00
Labor, erection of screen bars		14 22
Total		$3,859 03
Charge—		
Bay View siding and coal conveyer	$3,822 81	
Repairs of sewers	36 22	
		3,859 03

Respectfully submitted,

J. U. ISAACS,
Assistant Engineer.

REPORT OF
GRAFTON DUVALL

Sub-Division of Sewers—House Connections

Report of Grafton Duvall
1913

CITY ENGINEER'S DEPARTMENT,

SUB-DIVISION OF SEWERS—HOUSE CONNECTIONS.

BALTIMORE, January 1, 1914.

MR. H. K. McCAY, *City Engineer.*

DEAR SIR—I beg to submit the following report, showing the number of houses connected through this Division during the year of 1913, including the entire amount expended for the same and incidental figures thereto. In connection with my report, I desire to say that a complete change in the system of making loans for house connections was made as well as the filing method. Following the order of His Honor, Mayor James H. Preston, bids for sanitary connections were not asked for after April, 1913. The total number of houses given out from January 1, 1913, until the date of the order issued by the Mayor, is seventy-one.

Amount expended during 1913, from January 1 to December 31		$237,012 01
On hand January 1, 1913	$63,119 75	
Credited during 1913	19 64	
		63,139 39
Expended from general fund		$173,872 62
Total amount expended for connections, salaries, etc.		$237,012 01
Incidentals—		
Salaries	$974 61	
File	18 84	
Index folders	5 75	
Ledger	3 35	
		1,002 55
Total amount expended for sewer connections		$236,009 46

This amount, plus the 6 per cent. interest, is to be returned to the city in five years. Each house is also liable for the sum of five dollars.

Number of houses connected during 1913		1,931
Number of houses connected with owners' consent	1,860	
Number of houses connected without owners' consent	71	
Total		1,931

REPORT OF
FRANK H. BEALL, *Chief Inspector*

SUB-DIVISION OF INSPECTION

Report of Frank H. Beall, Chief Inspector
1913

City Engineer's Department,
Sub-Division of Inspection.

Baltimore, January 6, 1914.

Mr. H. K. McCay, *City Engineer.*

Dear Sir—I hereby submit a synopsis, showing work performed during the year 1913 in the city's streets by the public service corporations, contractors and individuals on permits issued by this Department, over which this Sub-Division had supervision and control.

The Chesapeake and Potomac Telephone Company constructed in public streets 61,244 feet of conduit.

The United Railways and Electric Company did a large amount of repairs and renewals to their tracks and structures during the year. Considerable inspection was necessary over their operations, both day and night, during which time over seven thousand different locations were inspected, exclusive of the one hundred and ninety preliminary inspections made prior to the issuance of the permits.

The Consolidated Gas Electric Light and Power Company constructed, in new and renewed service pipes, 410,500 feet; in new and renewed gas mains 60,100 feet, and in addition, did a large amount of work in disconnecting mains and service pipes, in changing the location of pipes and in making new connections. We had a very rigid inspection over this work and covered nearly 20,000 different openings made in the public streets, as well as 152 preliminary inspections made before the issuance of the permits. A very considerable amount of the repaving was restored by the Sub-Division of Street Repairs upon our paving orders.

The various pole and electric operating companies performed work in the public streets on approximately 1,400 permits, which covered approximately 7,000 different locations. Most of the paving disturbed in the footways was restored by the Chief Footway Inspector upon our paving orders.

During the year we supervised the blasting of sewer trenches, tunnels, foundations, embankments, etc., on 83 permits. This Sub-Division issues all permits and certificates of fitness necessary when explosives are handled in any manner whatsoever.

This Sub-Division issued 461 permits for the removal of steam rollers, traction engines, etc., as provided for in Ordinance No. 132, approved July 3, 1912.

The Baltimore and Ohio Railroad Company laid a considerable amount of new drain pipe and did the usual amount of repair work to their tracks and structures in the public streets, as well as the construction of new sidings under ordinances.

The Western Maryland Railroad Company did the usual amount of repairing to their tracks and structures in the public streets.

The Philadelphia, Baltimore and Washington Railroad Company did the usual amount of repair work during the year, as well as the construction of sidings under ordinances.

The Northern Central Railway Company did a very considerable amount of repair work to their tracks, renewal of switches, change of rails and relocation of sidings during the year, as well as the construction of sidings under ordinances.

The Terminal Heating and Freezing Company did the usual amount of repairing to their steam mains and service during the year and constructed eight new services.

The various electrical operating companies removed and trimmed during the year 2,510 trees in the public streets, under the supervision of this Sub-Division.

In addition to the foregoing, we inspected a large amount of work performed in the public streets on permits of a miscellaneous character. Over two hundred complaints, which arose from blasting, pole work, tree trimming, damaged drains, etc., were investigated and reported on. During the year a great number of paving tickets were forwarded to each respective division for their attention, and practically all of the paving disturbed on permits issued to corporations, contractors and individuals was restored by this Department.

About $150 in delinquent poles was reported to the Collector of Water Rents and Licenses for his information and attention, against the various pole-setting companies within the city.

Private drain work was inspected by this Division until August 1, 1913. Since then work of this character has been supervised by the Sewer Division of this Department.

During the year this Division has earned over and above the salary of the Chief Inspector and one clerk the sum of $1,660.65.

Respectfully submitted,

F. H. BEALL,
Chief Inspector.

REPORT OF

D. D. PORTER, *Chief Inspector of Footways*

Sub-Division of Footway Inspection

Report of D. D. Porter, Chief Inspector of Footways
1913

City Engineer's Department,

Sub-Division of Footway Inspection.

Baltimore, January 10, 1914.

Mr. H. K. McCay, *City Engineer.*

Dear Sir—I beg to submit the following report, showing the work done and the cost of same in the Footway Inspectors' Division of this Department for the year 1913. The report includes the cost of repaving and repairing footways by assessment, paving private footways, paving in front of city property, private paving and inspection and miscellaneous footway repairs, due to the resetting of curb by this Department; these footways were in good condition and on grade prior thereto; also the number of inspections made concerning footways, of which there were a great number, on account of the numerous excavations made across footways for sewerage connections, also investigations made concerning damage and accident suits and surface drains put under the footways.

Footway Notices.

The number of notices sent to property-owners during the year were 11,023, which is an increase of 4,523 over the year 1912.

Concrete Footways Laid.

There were 8,088 notices sent to property-owners to repave footways with concrete, where the bed of the streets had been paved with improved material and new curb installed; of this number, 7,442 concrete footways were laid for a total of 1,-

485,733 square feet, showing an increase of 5,867 concrete footways over 1912.

FOOTWAY DRAINAGE.

The number of open water drains put under footways during the year were 3,174, which is an increase of 2,299 over the year 1912.

PAVING PRIVATE FOOTWAYS.

There were a number of property-owners who failed to comply with notices sent them to repave dangerous footways. This work was given out on bids and awarded to the lowest responsible bidder. The number of footways thus constructed under inspection of this Department were 158 for a total cost of $11,586.72, and an assessment showing cost of same was sent to the Tax Collector for collection. This amount was charged to Paving Private Footways.

PAVING IN FRONT OF CITY PROPERTY.

New concrete footways were laid around public buildings as follows: Baltimore City Jail, No. 6 Public School, No. 22 Public School, No. 27 Public School, Polytechnic Institute, No. 19 Fire Engine House, Eastern Police Station, and various city squares. Bids were received and the work given to the lowest responsible bidder; work done under inspection of this Department. Total square feet, 43,601.

Total cost of work	$4,965 62
Repairs were made by this Department to footways around various public buildings throughout the city and city squares, fire engine houses, police stations and libraries:	
Repairs made at 181 locations—	
Cost of labor	805 89
Cost of material	95 27
Total	$5,866 78

PRIVATE PAVING AND INSPECTION.

Repairs were made throughout the city upon orders from private parties and the various telephone and telegraph companies in the removal and planting of poles under permits from this Department. The number of footways repaired were 406.

Cost of labor	$1,015 10
Cost of material	351 22
Work done for United Railways Company	2,150 00
Work done for Inspector of Buildings	2,192 09
Work done for Commissioners for Opening Streets	156 57
Work done for Sewerage Commission	24 42
Work done for Paving Commission	24 93
Work done for Superintendent of Lamps and Lighting	30 06
Total	$5,945 29

This was charged to Private Paving and Inspection.

FOOTWAY REPAIRS.

Repairs were made through the city due to the resetting of curbs, change of grades and to footways which were in good condition prior thereto. The cost of said repairs was $773.13.

Cost of labor	$577 74
Cost of material	195 39
Total	$773 13

This was charged to Repairs of Roads and Streets.

FOOTWAY INSPECTORS' REPORT.

Water stops reported to Water Department	106
Water washers reported to and lowered by property-owners	9
Surface drains across footways put under same	3,174
Improved driveways constructed by property-owners	525
Dead and dangerous trees reported to the City Forester	90
Inspections made concerning footways	10,000
Accident and damage suits investigated	12
Footway notices sent to property-owners	11,023
Concrete footways laid throughout the city	7,442

Respectfully submitted,

D. D. PORTER,
Chief Inspector of Footways.

REPORT OF

BRUCE ALDRICH, *Chief Asphalt Inspector*

Sub-Division of Municipal Laboratory

Report of Bruce Aldrich, Chief Asphalt Inspector
1913

CITY ENGINEER'S DEPARTMENT,

SUB-DIVISION OF MUNICIPAL LABORATORY.

BALTIMORE, February 5, 1914.

MR. H. K. MCCAY, *City Engineer.*

DEAR SIR—I have the honor to submit the report of the Municipal Asphalt and Chemical Laboratory for the year ending December 31, 1913.

The Laboratory has, during this period, in conjunction with the inspection (at seven asphalt plants) of the manufacture of sheet asphalt and bituminous concrete mixtures used in the construction of 447,000 square yards of pavement (an increase of 126,150 square yards over last year), tested all materials entering into the composition of and made daily examinations and analyses of the output of each asphalt plant.

All asphaltic and tar block fillers used in the laying of bituminous filler granite block streets were tested in this Laboratory, and a number of miscellaneous examinations were made, as will be seen on the attached tabulation sheet.

The work of the Chemical Laboratory has greatly increased during the past year, having made in addition to the coal analyses, many examinations of lead, steel, brasses, greases, oils, etc.

It is necessary for me to point out the lack of working room and storing facilities in this building, considering the increase in the number of analyses and tests that have been made in the past year. The cement department on the first floor could very readily use an additional room. The second floor is very much congested, on account of the large number of asphalt, tar, coal and miscellaneous tests that are being carried on. This condition often causes considerable loss of time, as there is some apparatus used in the miscellaneous work which should always remain set up ready for use, but because of the lack of room, must be taken down after the necessary work is carried out on it. Another difficulty, arising from the lack of space, is the insufficient room for storing samples, which causes the Laboratory to have an untidy appearance.

In the examination of asphalts, it is often necessary to ignite carbon-di-sulphide. This causes considerable carbon-di-oxide in the air of the Laboratory, and due to this, there is great chance for error in determining the sulphur in coals.

These conditions could be remedied if sufficient space were provided to separate the miscellaneous work from the asphalts, tars, etc., and provide storage room for the samples.

Attached hereto, please find a summary-sheet of the cost of maintenance of the Asphalt and Chemical Divisions of the Municipal Laboratory for the year 1913.

Respectfully submitted,

BRUCE ALDRICH,
Chief Asphalt Inspector.

SUMMARY OF EXPENDITURES OF THE ASPHALT AND CHEMICAL DIVISIONS OF THE MUNICIPAL LABORATORY.

(January 1, 1913, to December 31, 1913.)

Asphalt Division—		
Salaries		$10,601 01
Equipment		1,573 15
		$12,174 16
Credit—Asphalt analyses for various departments		1,186 50
Total		$10,987 66
Chemical Division—		
Salaries	$1,919 98	
Equipment	699 13	
	$2,619 11	
Credit—Miscellaneous analyses for various departments	2,059 50	
Total		559 61
Grand total		$11,547 27

SHEET ASPHALT AND BITUMINOUS CONCRETE LAID DURING THE YEAR.

	Sq. Yds.
Paving Commission	274,989.41
Commissioners for Opening Streets	112,980.00
City Engineer's Department	59,031.00
Total	447,000.41

	Per Sq. Yd.
Cost of inspection	$0.0207494
Cost of equipment and maintenance	.0050834
Total cost of inspection	$0.0258328

SAMPLES EXAMINED AT MUNICIPAL LABORATORY.

(January 1, 1913, to December 31, 1913.)

ASPHALT DIVISION.

REPORT OF

R. BROOKE MAXWELL

City Forester

Report of the City Forester

1913

BALTIMORE, January 1, 1914.

MR H. K. MCCAY,
City Engineer.

DEAR SIR:

I have the honor to submit herewith the first annual report of the Forestry Division of the City Engineer's Department for the fiscal year ending December 31, 1913.

REGULATING AND INSPECTING PRIVATE WORK.

After organizing the Division, the first work taken up was the matter of regulating and inspecting work done by private individuals. This was done by means of a permit system. The issuance of a permit for any sort of tree work frequently involves a preliminary and final inspection. The permit is accompanied by a set of specifications, which indicates the proper manner in which the work is to be done, and no work is approved until it fulfills the requirements of these specifications. The permit system proves fairly satisfactory, but is not the ideal method of municipal regulation of the street tree problem. Until the Division has sufficient funds to do all of the necessary work in connection with planting, pruning, spraying, removing, etc., the problem will not be fully and satisfactorily solved.

PRIVATE PLANTING.

The number and varieties of trees planted by individuals under the permit system since March 1, 1913, is tabulated below:

Species.	No.
Oriental plane	452
Norway maple	206
American elm	1
Sugar maple	37
European linden	16
Pin oak	1
Silver maple	138
Total	851

WORKING CENTER.

As the work of the Division grew it was found necessary to establish a building to be used as a working center. Accordingly, a building (sixteen feet by thirty feet) was erected by the Division of Forestry on the North avenue lot. This building serves as a tool house and as a meeting place for workmen and foremen. It contains a well-equipped shop, where tools are repaired and sharpened, and also an office, which is used by the Assistant City Forester and his foremen. Surrounding this building is a small tract of ground about one-eighth of an acre in area. It is used by the Division as a heeling-in ground and as a place for compost heaps. The Street Cleaning Department has generously donated to this Division a great amount of excellent street sweepings, which is being mixed with good, rich soil (whenever it is available) and piled in heaps to decompose. Several hundred tons of this material have already been been saved and is highly prized by the Division.

PRUNING WORK DONE BY THE DIVISION.

Realizing that it would be impossible to properly prune all of the trees in the city under several years, it was thought advisable to select localities where the more desirable species were growing and to put the trees there in proper growing condition. In these localities the low branches, all dead wood and fungous-covered branches were removed. Work of this nature was done on the following streets:

Mt. Royal avenue, from North avenue to Guilford avenue.
North avenue, from McCulloh street to Mt. Royal avenue.
Linden avenue, from North avenue to Dolphin street.
Eutaw Place, from North avenue to Druid Hill Park.
Madison avenue, from Druid Hill Park to Hoffman street.
Lafayette avenue, from Mt. Royal avenue to McCulloh street.
Park avenue, from Lafayette avenue to Wilson street.
Charles street, from North avenue to Twenty-fifth street.
Calvert street, from Twenty-fifth street to Thirty-first street.

About five hundred large trees and one thousand small trees were pruned during the season.

PLANTING DONE BY THE DIVISION OF FORESTRY.

Numerous requests from individuals have been received by the Division to place trees in front of their property. Requests have also come from neighborhoods to beautify a particular section by planting. The Division has found it impossible to comply with these requests, but, as far as possible, has tried to co-operate with those interested in tree planting in order that something might be done. Trees have frequently been planted for individuals, who purchased their own stock. The regular planting of the Division, since it has to be very limited, is being done where the greatest number of people will be benefited. Accordingly, public drives and otherwise much used thoroughfares are selected as the most desirable places to establish trees first. Below is a list showing the number, species and location of the young trees planted by this Division since March 1, 1913:

PLANTED IN SPRING OF 1913.

Holbrook street, from Lamont avenue to Hoffman street, planes	*89
Collington avenue, from Ashland avenue to Orleans street, Norway maples	*117
Allendale street, from Windsor Mill road to Clifton avenue, Norway maples	†42
Belle avenue, from Garrison avenue to western city line, European lindens	†104
Thirty-second street, from Charles street to St. Paul street, sweet gums	†23
Ensor Street Triangle, planes	*3
Total	378

PLANTED IN FALL OF 1913.

Garrison avenue, from Walbrook Junction to Berwyn avenue, planes	243
Mt. Royal avenue, from North avenue to Guilford avenue, planes	99
Hampden avenue, from Twenty-seventh street to Twenty-ninth street, planes	†42
Twenty-eighth street, from Huntingdon avenue to Hampden avenue, Norway maples	†20
1300 block Aisquith street (co-operation with owner), silver maples	13
Poplar Grove street (scattered), silver maples	41
School No. 64, mixed	15
Berwyn Triangle, ginko	1
Baltimore and Ohio tunnel surface (silver maples, 27; planes, 8)	35
Replanting failures on parked streets	168
City Jail, silver maples	4
Old Folks' Home (co-operation with institution), planes	19
Miscellaneous (property-owners), Norway maples	12
Total	612
Total planted in spring of 1913	378
Grand total	990

---

*Planting done for the Paving Commission.

†Planting done for the Commissioners for Opening Streets.

REPLANTING FAILURES.

All failures which occurred during the summer of 1913 on parked streets were filled during the fall of 1913. This work was paid for by the Division of Forestry. Because of a particularly unfavorable season and the late date at which some of the planting was done, the percentage of failures was greater than it should have been, amounting to 19 per cent. The failures were filled as follows:

Location and Species.	No.
Allendale street, Norway maples	*36
Belle avenue, lindens	25
Bond street, pin oaks	23
Collington avenue, Norway maples	42
Huntingdon avenue, pin oaks	14
Parkwood avenue, Norway maples	8
Thirty-second street, sweet gums	12
Hoffman street, planes	6
Woodbrook avenue, ginkos	2
Total	168

*Twenty-one of these were lost due to the placing of a sewer.

WASHINGTON'S GIFT.

The Division wishes to acknowledge here its gratitude to the City of Washington for its generous gift of trees. Six hundred trees were received from the City of Washington for the mere cost of digging and transporting the stock. Four hundred of these were Oriental planes, the remaining two hundred being silver maples. (The Division recognizes that silver maples are not especially desirable for street tree planting.) Some of these silver maples were planted in outlying districts and will be given the necessary attention to keep their crowns well shaped. Others of the silver maples were used for screen planting on the Baltimore and Ohio tunnel surface.

MAINTENANCE OF GRASS ON PARKED STREETS.

The maintenance of grass on newly-parked streets was taken care of by the Division of Forestry during the summer months. It was found necessary to cut the grass at least once a week. It was also found necessary to water the grass and young trees during the hot, dry months.

This maintenance of grass on parked streets is an important problem and as the number of parked streets increases it is safe to say that unless the funds of this Division are materially increased the grass will not be properly cared for.

After dealing with the problem of parked spaces for a year, the Division wishes to respectfully suggest the following: Intensive parking (using both trees and grass) can be used most advantageously in suburban or outlying sections. This is found to be true because of the fact that property-owners in a semi-rural section take great interest in helping the city to care for the areas. It is further respectfully suggested that the proper way to treat narrowed residential streets in the heart of the city is to properly space and plant desirable shade trees without the grass. It is important to leave a large opening about each of these trees—usually a space four feet by eight feet is adequate.

FIGHTING INSECTS.

Both leaf-eating and scale insects were found throughout the city during the past summer. Of the former, the tussock moth, bag worm and the fall web worm were common. Of the scale insects, the soft scale, the cottony maple scale and the oyster shell scale were found.

The northwestern portion of the city, including Forest Park and Walbrook, was very badly infested with the bag worm. These insects were discovered very early in the summer and they were thoroughly sprayed for during the early part of July. The application of the poison was found to be very effective and a second spraying was unnecessary. Later in the summer a serious infestation of tussock moth larvae was discovered in the vicinity of Mt. Vernon Place. These were sprayed for with arsenate of lead and destroyed. The scale insects will not be sprayed for until the winter months. This is necessary because of the fact that the materials used in the fighting of the insects is almost sure to burn the foliage if applied during the summer. Below is a list of the number and variety of trees sprayed during the past summer:

Variety.	No.
Oriental plane	1,500
Norway maple	200
Silver maple	250
North Carolina poplar	145
Total	2,095

The cost of this work did not exceed five cents per tree.

MUNICIPAL NURSERY.

From the very first the need of a municipal nursery was apparent. Although it is possible to buy very desirable stock from nurserymen, the problem of transportation must always be dealt with. This is a serious problem because it means the handling of the stock from three to five times, which, together with other unfavorable factors connected with transportation, frequently results in loss. By raising our own trees we have them available at all times and they have to be out of the ground only a few hours before they are planted again. It is estimated that trees can be grown on the city's watershed at a saving of 25 per cent. per tree. The nursery is located at Loch Raven and at present contains the following stock:

Species.	No.
Norway maple	900
Oriental sycamore	1,000
American elm	500
White ash	300
Total	2,700

These trees are being cared for by the superintendent of the County Division of the Water Department under the direction of the Division of Forestry. They will be sold to the Forestry Division at cost.

FORESTRY OPERATIONS ON THE CITY'S WATERSHED.

The Water Board has decided, together with other improvements in the Gunpowder Valley, to afforest those watershed areas which directly affect the drainage in the valley. Although much of this land is rich agricultural soil it is necessary to put it under forest cover to prevent erosion and the consequent silting of the reservoir. The protection afforded will also mean purer water and the gradual "paying out" or equalization of the flow—a condition which is desirable. Incidentally, an attractive woodland can be formed, which may eventually be lumbered at a profit. The Division acts as an advisory office to the Water Board and the plans drawn up are put into operation by the superintendent of the County Division. A "planting plan" has been drawn up covering four hundred and forty acres of the area. This plan will be carried out as rapidly as possible.

The old woodlands on the watershed will also be given attention. Forest thinnings in the young hardwood growths and damage cuttings in the older timber will constitute the chief operations in the woodland. In connection with the planting on the watersheds, a small amount of stock will be held in the Water Department's nursery. This nursery will be used to hold over evergreen stock (white pine and Norway spruce) to be used in filling failures and a small amount of hardwood stock (such as tulip, ash and red oak) to be raised to a size best adapted to successful planting.

FINANCIAL STATEMENT.

The following are the appropriations, expenditures and balance on hand January 1, 1914:

Appropriated for expenses	$5,000 00
Credit items	63 55
Total	$5,063 55

EXPENDITURES.

ANNUAL REPORT

OF THE

COMPTROLLER

DEPARTMENT OF FINANCE

COMPTROLLER'S OFFICE

CITY HALL

BALTIMORE, June 1, 1914.

To the Honorable the Mayor and City Council of Baltimore.

GENTLEMEN:

Herewith I respectfully submit the report of the finances of all departments of the City of Baltimore for the year 1913, showing, in detail, the receipts, expenditures, assets and liabilities as of December 31, 1913.

PART I contains "The Ordinance of Estimates for the Year 1913," reproduced for convenient reference.

PART II embraces the receipts, appropriations and expenditures for the year, arranged, as explained in the key immediately preceding Schedule A-1, in accordance with the uniform system of accounting of the National Municipal League.

PART III is a statement of active loans.

PART IV gives the assets and liabilities, taxable basis and other financial data, an explantory statement of which immediately precedes Schedule B-I.

NUMBER OF VOUCHERS.

During the year 19,391 pay warrants were issued, representing an expenditure of $24,381,195.65. The receipts were $23,378,116.70, evidenced by 748 receipt warrants.

DISCOUNTING BILLS.

The plan instituted by this Department for discounting bills saved the city $6,036.84 during 1913.

CITY PROPERTY INSURANCE FUND.

The "City Property Insurance Fund," referred to in my report for 1912, was created by Ordinance No. 408, approved February 21, 1914. It is believed that the creation of this fund will ultimately save the city a large sum of money, which is now expended for insuring city property.

REVISION OF CITY'S ACCOUNTING SYSTEM.

The agitation which has arisen from time to time for some years in regard to revising the city's accounting system resulted in the appointment by the Board of Estimates of a committee to study the subject. The committee consists of the City Comptroller, as chairman; the City Register, one of the judges of the Appeal Tax Court, the director of the Bureau of State and Municipal Research, and a representative of the audit company to which the contract was awarded for auditing the city's accounts for 1914. It is hoped that the work of the committee will be completed in time to institute, with the beginning of 1915, any changes which may be found advisable and practicable.

During the year two reports were made by the director of the Bureau of State and Municipal Research on the method of compiling and arranging the Comptroller's annual report. These reports carried with them several recommendations which, if put into practice, would no doubt improve the present system. The recommendations will be considered in connection with the work which has been undertaken by the committee above referred to.

A sub-committee, consisting of the Comptroller and the City Register, visited Pittsburgh, Chicago and Cleveland, and reported its findings to the Mayor as follows:

"The city of Pittsburgh is now engaged in the process of installing, for its municipal accounting, the system advocated by the New York Bureau of Municipal Research. Its late system of accounts has been in operation for the past twenty-five years, and it is proposed to displace entirely the old system by the new. The committee of business men appointed during the late administration by Mayor Mahool, to investigate our own accounting, recommended the system then advocated by the New York Bureau of Municipal Research, which, however, has probably undergone some change since that time.

"It was not deemed advisable, at the time the New York system was recommended by the Mahool committee, to abolish the existing system and supplant it with the new, and it is the opinion of this committee that the entire displacement of the present system by one that is radically different, would not be advisable now.

"We found at Chicago, that several years ago they substituted for their old method of accounting, a new municipal system. This system cost the city to install, all told, about $200,000, and we were informed that since that time a great portion of it has been abandoned. It is the opinion of the Chicago Comptroller's Department that the net result that now obtains could have been accomplished by a sensible revision of their former system, by their own and other competent accountants, at an expense of less than $10,000.

"At Cleveland we found them actively engaged in remodeling and extending their accounting system in very much the same manner that this committee recommends that the work be done here.

"Whilst we were not entirely unacquainted with the system in Philadelphia, it was planned that we should stop there, but we concluded to defer this examination on account of the failure of Mr. Chase to join us, and because the visit to Philadelphia could easily be made later, at some time when Mr. Chase could accompany us.

"In regard to the detail of the systems which we examined, we found in every instance that the accounts of the comptroller embraced all of the accounts of the lower departments, and that accounts were kept in full detail though not always to the minute extent in which they are kept in the lower departments. We found no instance where accounts were skeletonized in either the comptroller's or the lower departments. In some instances there was even a triplication of accounts.

"As compared with what we have seen, our own system, as a whole, has much to recommend it. It is not only acceptable in the main, but aside from the recommendations of the Baltimore Audit Company, and the suggestions of this committee, which will follow, needs little fundamental changing. There is more to be done in some departments than in others, but we believe all can be readily accomplished in our own time and at moderate expense.

"As the result of our observations, thus far, we submit the following suggestions:

"That there be installed in the Comptroller's Department accounts of the contractual obligations of the city with credits as payments are made, so as to show at all times the city's immatured obligations thereon: That similar accounts be kept in the lower departments with regard to purchases not under definite contract, so as to show the departmental floating debt: That in addition to the present controlling accounts in the Comptroller's department, others be installed to embrace all accounts of receipts and disbursements of the lower departments, and that controlling accounts be kept in like manner in the lower departments: That a complete classification of accounts be adopted, and that the same be standardized throughout all the departments: That a general auditor be appointed to install changes under the direction of the committee and to ultimately establish a distinct and independent department to carry on the work now being done by certified public accountants under contract.

"Certain changes, which these suggestions are intended to embrace, cannot be made without legislative authority, and obviously this should be obtained, if possible, from the Legislature now in session.

"We are aware of many needed improvements of lesser import that have not been referred to here, but which would naturally be taken care of in a revision, as would any others that might become manifest as such work progresses.

"It may not be out of place to make some reference to the system of checking, auditing and paying bills, and the drawing and issuing of vouchers and warrant-checks, which has lately been installed in the departments of the Comptroller and the City Register. Not only has this system worked satisfactorily and without obstruction in a single instance, but we have seen no other system that would accomplish our purpose quite so well, or that would suggest any improvement in the one we have established, and which we understand has since been adopted elsewhere.

"Municipal accounting may be carried to an indefinite extent, and may be made to exhibit information upon every line of thought that could be suggested, and even then it might not be free from criticism from some quarter. However, with rational development of, and addition to the system we have in operation, we believe it will compare favorably with the most modern and acceptable that we have seen."

In this connection I call attention to my suggestion in my report for 1912, that the city's accounting system be enlarged in order that the

Comptroller's ledger may show not only the appropriations and expenditures, as at present, but also the unincumbered balances of all appropriations and all outstanding credits and debits of the city.

I also suggested last year that the city adopt the principle of "scientific budget making."

This Department, however, is unable, with its limited force and the constantly increasing work, to undertake to put into effect many of the changes which it believes should be made.

PROPERTY LEDGER.

The work of preparing a property ledger was almost completed during the year, and when complete will give a record, historical and financial, of all property owned by the city.

SUPERINTENDENT.

Provision was made in "The Ordinance of Estimates for the year 1914" for the appointment of a superintendent to have general supervision over the sub-department, Department of Weights and Measures, the Harbor Masters and the eleven municipal markets. The creation of such an office by the Board of Estimates was made necessary by reason of the fact that there has never been adequate supervision of what may be called the outside work of the Comptroller's Department.

NEW MARKET ORDINANCE.

The legality of Ordinance No. 332, approved July 25, 1913, making changes in the market rates and regulations, was sustained by the Court of Appeals in an opinion filed May 6, 1914. While this is a legal victory for the city, it is my opinion that the outcome of the litigation means the prolonged life of the municipal markets, for with the increased revenue the city will be justified in making many needed improvements to the market structures. The increased rates cannot be seriously said to impose a hardship upon the market people, when it is realized that the increase upon the butcher stalls amounts only to eleven cents a market day and on all other kinds of stalls to less than one cent a market day.

DEPARTMENT OF WEIGHTS AND MEASURES.

As an evidence of the thorough and efficient work of the several inspectors of the Department of Weights and Measures, fewer complaints of short weights and false measures were received in the Comptroller's office from consumers during 1913 than during any previous period of the present administration. For the first time in the history of the Department, the inspectors were shifted in the various districts. The effect of the change was good. It made it possible for the inspectors to check up the work done by their predecessors.

CITY STOREKEEPER.

The new City Storekeeper's Department is being put into operation. For the present it is under the Comptroller's supervision. This department promises to be a money saver to the city as the result of systematizing and standardizing supplies and purchasing in bulk, instead of individual departmental action, as heretofore. Mr. Charles Wilson, formerly connected with the Storekeeper's Department of the Baltimore and Ohio Railroad Company, was appointed City Storekeeper last fall.

EFFICIENT FORCE.

It is with much pride and pleasure that I can refer again to the continued efficiency and loyalty of each member of the Department throughout the year. The work of the Department is constantly enlarging, with the increased activities of all the city departments, and it is gratifying that the force have, without exception, thoroughly and faithfully discharged their duties.

Very respectfully,

James F. Thrift, *Comptroller.*

PART I

THE
ORDINANCE OF ESTIMATES
FOR THE YEAR
1913

THE
ORDINANCE OF ESTIMATES
FOR THE YEAR 1913

In accordance with the provisions of the New Charter of Baltimore City (Sections 36 to 40, inclusive), the following three lists, for the use of the Mayor and City Council of Baltimore for the year 1913, were presented by the Board of Estimates to the City Council, and were duly passed and approved by the Mayor on December 11, 1912. (Ordinance No. 201.)

LIST No. 1

Departmental Estimates

INSPECTOR OF BUILDINGS.

Salaries	$60,360 00	
Repairs to city property (consolidated)	161,700 00	
Contingencies (to be expended only upon written orders from the Board of Estimates)	20,000 00	
Emptying cesspools	300 00	
Livery and transportation	1,800 00	
Incidentals	400 00	
		$244,560 00

COMMISSIONER OF STREET CLEANING.

Salaries	$26,840 00	
Street carts and men	140,400 00	
Sweepers and scrapers	193,440 00	
Foremen	19,188 00	
Sweeping machines and sprinklers	63,634 00	
Cleaning sewers and inlets	37,368 00	
Tools, repairs, etc.	8,085 00	
Incidental expenses	2,720 00	
Removal of garbage	66,500 00	
Collection of ashes and garbage	227,483 22	
Removal and disposition of non-perishable waste	25,000 00	
Emergency Fund (to be expended by permission of the Mayor upon request of Commissioner of Street Cleaning for removal of snow, ice, etc.)	10,000 00	
Destruction of weeds, grass, etc.	2,000 00	
		822,658 22

The Board of Estimates reserves the right at any time during the year to use part of the appropriation for one or more items for another or other items upon request of the Commissioner of Street Cleaning.

SUPERINTENDENT OF LAMPS AND LIGHTING.

Salaries	$16,788 00	
Gas lighting and maintenance	179,742 60	
Electric lighting and maintenance	257,340 81	
Naphtha lamps and maintenance	9,312 00	
Incidentals	350 00	
		$463,533 41

HARBOR BOARD.

Salaries	$6,130 00	
Dredging harbor	55,277 00	
Iceboats	23,430 00	
Repairs to wharves, piers and bulkheads	7,300 00	
Light Street Bridge, salaries and maintenance	16,619 00	
Removal of ashes	1,100 00	
Removal of floating matter	1,935 00	
Incidentals	500 00	
		112,291 00

COMMISSIONER OF HEALTH.

Salaries	$131,780 00	
Expenses	32,950 00	
Abatement of nuisances	1,000 00	
Tuberculosis dispensary	6,000 00	
Quarantine, salaries	13,525 00	
Quarantine, expenses	7,350 00	
Sydenham Hospital, salaries	10,160 00	
Sydenham Hospital, expenses	10,650 00	
		213,415 00

BOARD OF FIRE COMMISSIONERS.

Salaries	$764,335 00	
Expenses	193,350 00	
Pensions, firemen's widows	5,425 00	
		963,110 00

CITY COLLECTOR.

Salaries	$74,900 00	
Expenses	5,855 00	
		80,755 00

CITY ENGINEER.

Salaries	$43,880 00	
To be taken from estimated receipts from Commissioner of Motor Vehicles:		
Expenses	19,400 00	
To be taken from tax levy:		
Expenses	423,250 00	
Emergency Fund (to be expended only upon written orders of the Board of Estimates)	10,000 00	
		496,530 00

APPEAL TAX COURT.

Salaries	$67,600 00	
Expenses	2,285 00	
		69,885 00

BOARD OF LIQUOR LICENSE COMMISSIONERS.

Salaries	$13,300 00	
Expenses	3,300 00	
		16,600 00

COMMISSIONERS FOR OPENING STREETS AND ANNEX IMPROVEMENT COMMISSION.

Salaries	$9,900 00	
Expenses	500 00	
		$10,400 00

BOARD OF SUPERVISORS OF ELECTIONS.

Salaries	$15,000 00	
Expenses	3,461 00	
Registration, fall	49,990 00	
Primary, fall	33,710 00	
General election, fall	33,810 00	
		135,971 00

CITY LIBRARIAN.

Salaries	$5,272 00	
Expenses	23,900 00	
		29,172 00

		$16,408,977 78

RECAPITULATION

Estimated amount necessary for the maintenance of the city government for the year 1913, as appropriated by the Ordinance of Estimates for the year 1913	$23,412,869 41
Estimated receipts from licenses, fees, rents and all other charges, including the amount believed to be collectible from taxes in arrears and also from taxes at fixed rates for the year 1913	16,408,977 78
Amount to be raised by taxation at the full rate	$7,003,891 63

Estimating 82½ per cent. collectible on $422,366,449, this representing property assessable at full rate, or $348,452,320, the Board of Estimates, on November 26, 1912, stated a tax rate of $2.01 per $100 for the fiscal year 1913 would be necessary to produce the difference between the anticipated expenditures and receipts of the city, the product of the same being $7,003,891.63.

Table Showing Apportionment of Taxes to be Raised by Taxation at Full Urban Rate of $2.01 Per $100 for the Year 1913.

TAXES	TAXABLE BASIS OF PROPERTY ASSESSABLE AT FULL RATE	RATE Per $100	Per Cent. Collectible	PRODUCT OF SAME	AMOUNT REQUIRED	EXCESS	DEFICIENCY

PART II

Receipts, Appropriations and Expenditures

FOR THE

FISCAL YEAR ENDED DECEMBER 31, 1913

SCHEDULES A

Receipts, Appropriations and Expenditures

of the City of Baltimore, for the Fiscal Year 1913

EXPLANATORY.

Schedule A-I is a consolidated statement of the total receipts from all sources and the expenditures for all purposes for the fiscal year. It includes all financial transactions of the city which enter into the debits and credits of the year, together with the cash balances at the beginning and end of the year.

Schedule A-I*a* is a consolidated statement of the Comptroller's ledger, as of December 31, 1913, according to city departments. This statement is published monthly in the *Municipal Journal.*

Schedule A-II gives the large items which make up the total receipts, as per Schedule A-I, arranged to conform with "Estimates of Receipts to Apply on Appropriations for the Year 1913."

Schedule A-III gives the large items which make up the total expenditures, as per Schedule A-I.

Schedule A-IV divides the total receipts, expenditures and appropriations into four distinct heads: "Ordinary," Extraordinary," Trust Funds" and "Temporary Accounts."

Schedule A-V sub-divides into ten groups, according to general purposes or functions, the "Ordinary," Extraordinary" and "Appropriations" items of Schedule A-IV.

Schedule A-VI expands the ten groups of Schedule A-V into various divisions.

Schedule A-VII takes up the entire budgetary activities, including balances brought forward, appropriations, receipts, transfers, expenditures and the balances remaining at the close of the year, and the disposition of the latter. This schedule is a digest of the Comptroller's ledger.

Schedule A-VIII consists of the ultimate details of each department's accounts, sufficient space being allowed that all the important divisions of expenditure may be completely set forth. The gross receipts of each sub-division are also shown.

It will be seen that the schedules progress consistently and steadily from the gross statements to the details, each succeeding schedule being an amplification of the preceding one and in complete harmony with it, and all arranged upon a definite, consistent and uniform system.

SCHEDULE A—1.

Consolidated Statement of Cash Balances, Receipts and Expenditures of the Fiscal Year 1913.

NAME OF ACCOUNT.	Cash Balance Certified by City Depositories, Jan. 1, 1913.	Receipts, Jan. 1 to Dec. 31, 1913.	Total.	Expenditures, Jan. 1 to Dec. 31, 1913.	Cash Balances Certified by City Depositories, Dec. 31, 1913.
Mayor and City Council of Baltimore account	$2,641,771 52	$23,378,116 70	$26,019,888 22	$24,381,195 65	$1,638,692 57

Grand total (A-I)		$26,591,954 27

SCHEDULE A—IV.

General Exhibit of Receipts, Appropriations and Expenditures of the Fiscal Year 1913.

Separated under the four heads, "Ordinary," "Extraordinary," "Trust Funds" and "Temporary Accounts."

	Receipts.	Appropriations.*	Expenditures.
ORDINARY.................... (Schedule (A-VI)	$17,457,863 96	$16,065,348 77	$18,639,720 41
EXTRAORDINARY............... (Schedule (A-VI)	7,949,280 52	7,331,625 90	7,471,272 63
TRUST FUNDS................ (Schedule (A-VI)	51,962 73	4,258 00	50,849 54
TEMPORARY ACCOUNTS......... (Schedule (A-VI)	401,891 53	9,873 64	430,111 69
Totals (A-I-I*a*-II-III)...	$25,860,998 74	$23,411,106 31	$26,591,954 27

*Ordinance of Estimates, Part I.

"Ordinary" has relation only to the current receipts and "running expenses" (operation and maintenance), and does not include receipts or payments on account of loans, nor on account of permanent construction or other capital accounts.

"Extraordinary" has no relation to current receipts or "running expenses," but does include receipts and payments on account of loans, and for permanent construction and other capital accounts.

"Trust Funds" include all receipts and payments of the city when acting as trustee or as agents for funds, trusts, special deposits, etc., which cannot be used except for particular and specified purposes.

"Temporary Accounts" include all receipts and payments of the city which are simply journal items, or items paid in, temporarily held and paid out again.

It will be observed that the "Expenditures" are in excess of "Appropriations" or "Receipts," which is explained by credit balances being brought forward from previous years. The "Receipts" and "Appropriations" are actual for the year 1913 and do not include credit balances brought forward.

SCHEDULE A—V.

Exhibit of Receipts, Appropriations and Expenditures, Separated into Ordinary and Extraordinary, and Grouped According to Functions.

	Receipts.		Appropriations.	Expenditures.

PENSIONERS (20).

Appropriation	$48,531 03	
Balance brought forward from 1912	2,568 76	
		$51,099 79

EXPENDITURES.

Retired officers of the Police Department:		
Eastern District	$6,915 65	
Northeastern District	8,978 41	
Northern District	4,049 29	
Central District	9,470 12	
Western District	5,793 55	
Northwestern District	4,619 36	
Southern District	6,872 64	
Southwestern District	5,521 90	
Headquarters	1,693 51	
	$53,914 43	
Paid out of Police Department funds	2,814 64	
Paid by city		51,099 79

The above covers but seven months, the remaining five months of the year being paid by the Police Department out of its own funds, over which funds the city has no control, because of the fact that the department is a State institution. The city is responsible for its salaries and expenses and any deficiency in the pension fund.

NOTE 1—The large deficit of 1913 is due to non-payment of licenses, rents and per diems pending contest by the market people of the validity of Ordinance No. 332, approved July 25, 1913, making changes in the market rates and regulations.

NOTE 2—Case decided in the city's favor by the Court of Appeals, May 6, 1914.

PART IV

SCHEDULE B

THE

ASSETS AND LIABILITIES and TAXABLE BASIS

OF THE CITY OF BALTIMORE

AS OF DECEMBER 31, 1913

EXPLANATORY

Heretofore, in preparing the assets and liabilities of the City of Baltimore, the original costs of properties have been used as the basis. It is quite evident that in most cases the cost no longer represents the present market value, and it is only proper that due consideration should be given to changes in the value of lots since acquisition and in the value of buildings since erection, either by way of depreciation or appreciation; and, while a complete and thorough revaluation of city properties has not been made in recent years, a revaluation statement was nevertheless prepared by Thomas J. Lindsay and Alfred D. Bernard, Esquires, Special Assessors of the Appeal Tax Court, early in January, 1911, in a hurried period of ten days, of the market values of all city properties, excepting the following classes of property, namely: New sewerage system, water system, electrical conduit system, fire and police electrical systems, free public baths, public libraries, bridges, public comfort stations, public franchises and easement values and miscellaneous personal property.

Among "miscellaneous personal property" may be included the equipment, horses, carts and machines of the Department of Street Cleaning; furniture and office equipments of the city departments and municipal buildings; library and invaluable records of the City Librarian; libraries of the Appeal Tax Court and Law Department; Bay View Asylum and Hospital outfit; the Tug "Baltimore," the Iceboats "Latrobe" and "Annapolis" and the Launch "Major," under the control of the Harbor Board; the Park Board's machines, machinery and farm and garden implements and utensils; the equipment of Sydenham and Quarantine Hospitals; and numerous other items and articles, all of which are valuable and would increase the assets of the city by many hundreds of thousands of dollars.

In our tables of assets this year we reproduce the findings, with the changes which have subsequently occurred, of Messrs. Lindsay and Bernard, which we have used as the basis, rather than the original costs, as heretofore; and, while the present statement is not entirely satisfactory, we believe it is preferable to using cost figures as the basis. The Comptroller's Department undertook the preparation of a property ledger in 1913, and when this is completed errors which may have crept into the statements of assets and liabilities from year to year will be corrected.

The following is reproduced from Messrs. Lindsay and Bernard's letter, in which they submitted their report to the Appeal Tax Court:

"In computing the values of lots owned by the city, we have considered the present highest utility, from which we have deducted the fair market value of all the ground rents on such portions as are leasehold, and where the properties are improved we have added the cost of the improvements, from which we have deducted depreciation at the rate of 1 per cent. per year for each year of the age of the building, except where buildings were erected between 1895 and 1903, where we have made average increases in construction value before deducting depreciation account.

"In reaching the fair market value of the various parks and squares in the city, we have assumed that the purchasers would develop the tracts to meet the utility of the land, and have put them in at a valuation running from four-fifths to one-quarter of the market value of a single lot. This is based on the theory that a single block of ground would be developed at a profit of 20 per cent., while a tract which might cover a period of twenty years in the development ought to show at least 400 per cent. gross paper profit, to cover loss of area in producing streets and alleys, development expenses and interest.

"We have not considered the value of these tracts at single lot prices, but have assumed a single purchaser for a whole tract.

"In reaching the value of the city's waterfront, we have assumed that the purchasers would pay taxes and have, therefore, capitalized rentals from 7 per cent. to 8 per cent.

"In a scheme so large to make other than an approximate estimate in a short time would be impossible, and we have, therefore, omitted anything like an analysis of values.

"We have, however, valued each property separately, and whenever we deem it necessary, we have given figures and made comment sufficient we trust to make our work intelligible.

"We have also approached the subject in the spirit of the utmost conservatism, and have not been influenced by prices paid for property, simply using these sales as guides, and have resolved all our doubts and misgivings against the city in order that its citizens may have a conservative valuation of the property it owns.

"We have not valued any asset of the city, the sale of which would injure adjoining property irreparably and, therefore, cannot include a number of properties classed as park and squares which are of necessity parts of streets; the sewerage system, conduits, franchise rights and easements are all excluded.

"In fixing acreages of tracts, we have assumed the acreages were given in the Comptroller's report. In a few instances we have made the computation ourselves.

"As it would be impossible for us to make an approximate value of the water system as an entirety, we suggest that it be added as reported to the Comptroller. We have, however, in computing the area of the parks, excluded the acreage of the reservoirs."

The Bureau of State and Municipal Research, in its Report No. 4, presented suggestions for improving the method of reporting the assets and liabilities of the city. This report will be given due consideration in the general study to be made of the city's accounting system, as stated in the letter transmitting the Comptroller's Report to the Mayor and City Council of Baltimore. Some slight changes are, however, made in the present report.

SCHEDULE B

B—I.	Taxable Basis of Baltimore City for the Year 1914.
B—I*a*.	Comparative Statement of Departmental Appropriations, With the Full Assessable Basis and the Tax Rate for the Years 1901-1914.
B—II.	Consolidated Statement of Assets and Liability Accounts.
B—III.	Comptroller's Balance Sheet.
B—III*a*.	City Register's Summary of Cash Receipts, Disbursements and Balances During the Year 1913.
B—III*b*.	Current Assets and Liabilities of Active Loans.
B—III*c*.	Appropriation Balances (Against Other Assets).
B—IV.	Commissioners of Finance Cash Balances (Sinking Funds).
B—V.	Funded Debt.
B—V Con.	Increase of Funded Debt Authorized, But Not Yet Issued.
B—V*a*.	Accrued Interest on Funded Debt.
B—V*b*.	Stock and Certificates Held by Commissioners of Finance for Sinking Funds.
B—V*c*.	Accrued Interest on City Stock in the Sinking Funds.
B—V*d*.	Accrued Rentals of Real Estate and Ground Rents on the Books of the Commissioners of Finance.
B—V*e*.	Enoch Pratt Free Library Fund.
B—V*f*.	Horwitz Benevolent Fund.
B—V*g*.	Frederick Raine Fund.
B—VI.	Uncollected Taxes.
B—VII.	Miscellaneous Assets and Trust Funds and Special Accounts.
B—VIII.	Salaries and Sundry Bills Due December 31, 1913, Not Payable Until January 1, 1914.
B—IX.	Water Department Statement of Land, Construction and Real Estate to December 31, 1913.
B—X.	Electrical Commission Subways.
B—XI.	Wharf Property Owned by the City of Baltimore.
B—XII.	Miscellaneous City Property, Public Buildings and Real Estate.
B—XIII.	Public Schools.
B—XIV.	Fire Department Property (Engine Houses and Equipment).
B—XV.	Public Parks and Squares.
B—XVI.	Police Station Houses.
B—XVII.	Municipal Markets.
B—XVIII.	Ground Rentals on City Property, Held by Commissioners of Finance for Redemption of Loans.
B—XIX.	New Sewerage System.
B—XX.	Free Public Baths and Public Comfort Stations.
B—XXI.	Uncollected Water Rents.
B—XXII.	The Enoch Pratt Free Library.

SCHEDULE B—I.

Taxable Basis of Baltimore City for the Year 1914.

Assessable at Full Rate ($1.98 per $100):			
Real estate		$352,681,639	
" " (estimated additional)		750,000	$353,431,639
Personal property (individuals, firms and foreign corporations		$49,347,004

†Total depreciation on structures marked off from cost of construction, $333,472.23.

SCHEDULE B—XVIII.

Ground Rentals on City Property Held by Commissioners of Finance for Redemption of Loans.

The following ground rents are held by the Commissioners of Finance for the redemption of loans, and while practically these rents are extinguished, yet as the cost price of each was furnished out of the Sinking Fund, they become assets of the Sinking Fund to the extent at least of their redemption value, if not their full market value, so that Messrs. Lindsay and Bernard, in their revaluation of 1911, charged off the ground rents at market, or redemption, values, and tabulated them separately, including them among the city's assets.

SCHEDULE B—XXII.

The Enoch Pratt Free Library.

General Statement.

The Enoch Pratt Free Library was founded by a citizen of Baltimore, whose name it bears. On January 21, 1882, he made the city the munificent offer of a Central Library Building and the sum of $833,333.33, "provided the city will grant and create an annuity of $50,000 per annum forever, payable quarterly to the Board of Trustees, for the support and maintenance of the Library and its branches." This offer on the part of Mr. Pratt received the thanks of the Mayor and City Council and, as a result of the action of these authorities, an Act was passed by the General Assembly of Maryland at its January Session of 1882 (Chapter 181) enabling the city to accept the donation from Mr. Pratt and providing for the appointment and incorporation of trustees for the management of the Library.

This acceptance was made by the legal voters of the City of Baltimore at an election held October 25, 1882, when they approved an ordinance of the Mayor and City Council accepting the gift.

The powers given the institution by the original charter were enlarged by Chapter 221 of the Acts of 1900, so that gifts, bequests, devises and conveyances of property could be received from any source by the trustees and held in a similar manner to the original gift.

The Central Building was completed in the autumn of 1884, and shortly thereafter the Hon. Lewis H. Steiner, M. D., was elected librarian, and the Library was formally opened to the public on January 4, 1886.

The total number of books now owned by the Library is 307,540. The circulation of books for home use from the Central Library and the sixteen branches and stations amounted to 621,924 in 1913, and 92,098 magazines were used in the Central Library reading-room.

The expenditures for 1913 were:

Books	$15,955 01
Periodicals	2,313 91
Binding	3,759 07
Construction and repairs	5,348 39
Stationery and supplies	2,461 80
Insurance	685 00
Furniture and typewriters	1,084 24
Drayage	799 80
Rent	615 02
Coal	2,801 00
Light	2,833 52
Printing	633 89
Miscellaneous	3,231 76
Salaries	51,422 71
Total	$93,945 12

At the time the Library was opened, probably no city in the United States, except Boston, was more adequately served by a public library than Baltimore. As the years passed on, however, both population and area of the city were doubled, while no additional income was received by the Library, which was thus unable either to enter new fields of library work or properly to cover the ground which it endeavored to occupy. After careful thought, Mr. Andrew Carnegie was asked to consider our needs, and generously responded by a gift in November, 1906, of a half a million dollars to be used for the construction of twenty branch library buildings, which should be maintained by the city, with an appropriation of not less than 10 per cent. of the cost of the buildings, and should be erected upon lots provided either by the municipality or by the gift of individuals or corporations. The funds provided by Mr. Carnegie may be used for the purchase of furniture for the buildings, but are not available for the purchase of books. It was thought necessary that an amendment of the City Charter should be made in order to make certain the right of the city to accept this gift, and to make an appropriation for library purposes. This legislation was secured at the session of the General Assembly in 1908 (Laws of 1908, Chapter 144), and in the same year an appropriation was first made by the city and ground was broken for the first of the branch libraries erected from Mr. Carnegie's gift. Seven of the branch libraries provided for by the Carnegie Fund have already been erected. An additional Central Library is greatly needed, as are lots on which new branch libraries may be placed.

Note—The City is treated as trustee of the Enoch Pratt Free Library lots, buildings, and equipment, and therefore the values are not included among the City's assets.

FROM THE REPORT OF THE

BALTIMORE AUDIT COMPANY

BALTIMORE, March 20, 1914

The Honorable Mayor and City Council of Baltimore.

GENTLEMEN:

We have completed our audit for the year ended December 31, 1913, embracing a thorough examination of the vouchers, the books and accounts of each and every department, the verification of all additions and extensions, and the checking of all postings.

In the offices of the Collector of Taxes and the Collector of Water Rents and Licenses, these two departments being the main source of revenue of the city, we verified all extensions and additions, and saw that all money received was properly accounted for and turned over to the Comptroller.

In these departments a few errors were found in the extensions and postings. Statements were rendered, and corrections were made adjusting these errors.

In sundry other departments the additions were verified, postings checked, and we found that the expenditures were in agreement with the Comptroller's books. Furthermore, trial balances were drawn from the ledgers, and all were in balance under date of December 31, 1913.

In the Comptroller's office we verified all extensions and additions; examined all the pay vouchers, and followed all receiving and pay warrants to the Register's office, and verified the trial balance under date of December 31, 1913.

In the City Register's office all receiving and pay warrants were checked with the cash book, all additions verified in said book, and the balance on hand as of December 31, 1913, was proved by counting the cash on hand and reconciling the amounts as certified to by certificates from the depositories.

All stock issued, whether by sale or transfer, was verified by checking sales of stock to the cash book, and for all stock issued in lieu of transferred stock it was seen that the original stock certificates for the same amounts were duly cancelled. Each issue of new stock was checked to its proper ledger account.

In the Finance Commissioner's Department, all the extensions, additions and posting, together with the vouchers, were examined and verified, and the cash on hand was found to be in agreement with the balance as per certificates from the several banks. The Finance Commissioners had stock in the vaults of the Safe Deposit and Trust Company, under date of December 31, 1913, in trust for the various sinking and special funds, as shown by the following table:

City stock on hand January 1, 1913		$20,207,359 97
Purchase of city stock from time to time during 1913		1,575,100 00
		$21,782,459 97
Less Water 1922 Sinking Fund sold to Enoch Pratt Free Library Sinking Fund		601,000 00
		$21,181,459 97
Certificates of deposit (city stock as collateral)		4,263,000 00
		$25,444,459 97
Enoch Pratt Free Library Fund, January 1, 1913	$1,174,100 00	
Less Water 1922 5% sold Commissioners of Finance	500,000 00	
	$674,100 00	
Plus Water 1922 5% Sinking Fund purchased from Commissioners of Finance	601,000 00	
		1,275,100 00
Horwitz Benevolent Fund		20,000 00
Frederick Raine Fund		400 00
		$26,739,959 97

Valley Railway, State of Virginia (10,000 shares)	No value
Baltimore and Reisterstown Turnpike Stock (550 shares)	$412 50
Baltimore and York Turnpike Stock (625 shares)	No value

All of the above stock was examined by us in the presence of the Finance Commissioners on March 19, 1914.

We desire to thank the heads of each department, as well as all clerks, for the assistance and courteous treatment rendered us during our audit.

Respectfully submitted,

BALTIMORE AUDIT COMPANY,

(Signed) CHARLES L. HEHL, *President*,
Certified Public Accountant.

APPROVED:

(Signed) JOHN KUCHLER, *Vice-President*,
Certified Public Accountant.

(Signed) ERNEST E. WOODEN, *Sec. and Treas.*,
Certified Public Accountant.

The report includes a number of statements, exhibits and schedules of the city's finances for the year 1913.

CITY COLLECTOR

ANNUAL REPORT

OF THE

CITY COLLECTOR

TO THE

Mayor and City Council of Baltimore

FOR THE

FISCAL YEAR ENDING DECEMBER 31, 1913

1797

BALTIMORE
MEYER & THALHEIMER
CITY PRINTER

1914

REPORT

CITY COLLECTOR'S OFFICE,

CITY HALL,

BALTIMORE, January 1, 1914.

To the Honorable Mayor and City Council of Baltimore.

GENTLEMEN—I beg to submit for your consideration the report of this Department for the year ending December 31, 1913, showing that the amount of money received from all sources during the year was $11,262,208.11.

Table "A" shows the monthly collections of both city and State, including the rural, suburban and annex, amounting to $11,262,208.11. Of this total the city's proportion was $9,705,351.77, and that of the State $1,556,856.34.

Table "B" shows the basis of the several levies on which collections have been made during the past year, with the amount collected on each levy; also the gross amount received for opening and for paving streets; also the amount received from mortgages.

Table "C" shows the rate of tax per $100 and various items of the several levies from 1908 to 1913, inclusive.

Table "D" is an exhibit of the monthly receipts on the several levies from 1900 to 1913; also receipts for opening streets and alleys and paving streets and alleys, for securities, savings banks and for mortgages.

Table "E" shows the respective percentages of current taxes collected on the several classes of property.

Table "F" shows the percentage collected upon during the current year of the respective levies, including securities and savings bank deposits from 1902 to 1913, inclusive.

Table "G" shows the percentage collected monthly on real and personal property (levy of 1913) to December 31, 1913.

Table "H" shows receipts for opening and closing streets and alleys during the year, amounting to $115,441.61.

Table "I" shows receipts for paving streets, alleys and footways during the year, amounting to $7,141.74.

Table "J" shows the total amounts collected, the total basis collected upon during the year 1913 in comparison with the same for the year 1912.

Table "K" shows the total collections made during the year 1913 in comparison with the estimate as made by the Board of Estimates, *showing the amount collected over estimate of* $418,698.88.

Table "L" shows receipts collected during the year for Special Paving Tax, less discount, and with interest and penalty added, amounting to $62,317.76, and sewer connections, with interest, amounting to $14,695.32.

RURAL, SUBURBAN AND ANNEX.

Table "A" shows the amounts of city and State taxes collected during the year upon the levies of 1906 to 1913, amounting to $531,317.25; also the basis upon which such collections were made. Of this total the city's proportion was $407,011.52, and that of the State $124,305.73.

Table "B" shows the basis of the several levies on which collections have been made during the year, including the amount of interest received from taxes in arrears and the amount of discount allowed for prompt payment.

I would especially call your attention to Tables "G" and "K."

Table "G" shows net percentage of collections of real and personal basis for year 1913 to be 84½ per cent.; my estimate to Board of Estimates was 82½ per cent., showing my collections to be 2 per cent. over estimate.

Table "K" shows an excess collection over estimate (from all sources, current and arrears) of $418,698.88, due in a measure to extra efforts put forth to bring up the collections. As the money conditions were not the best during the year 1913 it is particularly gratifying that in face of these conditions my collections should show such a handsome increase.

Under present laws, personal taxes are in arrear May 1, and real estate taxes July 1 of the current year. I understand a bill has been offered in the Legislature making both real and personal in arrear at the same time. This meets with my hearty approval and I sincerely wish it will become a law.

I wish to acknowledge the cordial co-operation of his Honor, the Mayor, and other officers of the city with whom I have been brought in contact in the discharge of my official duties.

Respectfully submitted,

Jacob W. Hook,
City Collector

REPORT

OF THE

CITY LIBRARIAN

TO THE

Mayor and City Council of Baltimore

FOR THE

YEAR ENDING DECEMBER 31, 1913

1797

BALTIMORE
MEYER & THALHEIMER
CITY PRINTER
1914

Report of the City Librarian

BALTIMORE, December 31, 1913.

To the Mayor and City Council of Baltimore.

GENTLEMEN:

The activities of the City Library during the past year have been of a varied character. The City Librarian, in his capacity as purchasing agent for certain classes of supplies, placed about 7,000 orders. The material was delivered to one point and distributed to various City departments, including not only those in the City Hall, but to the several annexes; Bay View, and, in some instances, the schools. This feature of the duties of the Librarian has kept the force very busy, as the detail work incident to properly inspecting and checking supplies, auditing bills and keeping accounts, is very extensive. The amount expended through the Office of the City Librarian for this purpose was $35,035.40. Of this, $24,250.28 were charged against the City Library appropriation, while $10,785.12 were expended by the City Librarian for Departments which, themselves, carried appropriations for such supplies as blank books, stationery and printing.

The distribution of The Baltimore Book continued and an edition of 20,000 copies, which came from the press in 1912 (making a total of over 30,000 issued) was sent practically all over the world. Incidently, another issue of 10,000 is now in work, and I beg to advance the suggestion that later translations into the Spanish and Portuguese languages be made for South American distribution.

The already large collection of prints, pictures, etc., at the City Library, was increased by a number of good "finds." This pictorial display of Baltimore now numbers over 2,000. It is no doubt the best and certainly the most unique collection of which any city can boast. The City Library specializes in works and data pertaining to Baltimore and Maryland, and during the year no chance was neglected to add to the store of rare books in the Library files.

Very respectfully,
WILBUR F. COYLE,
City Librarian.

Commissioner.

EUGENE F. RODGERS,
Secretary.

REPORT

BALTIMORE, December 31, 1913.

To the Honorable the Mayor
and City Council of Baltimore.

GENTLEMEN:

In submitting to you this fifty-third annual report of the Department, we take pleasure in calling your attention to the large number of important street openings and closings that have been finally considered by the Commissioners, as well as those pending. The final returns have been filed with the proper officials, in accordance with the laws governing our procedure.

A résumé is given below.

The work this Department is now called upon to perform in connection with the different steps necessary for the actual acquisition of property for street beds has greatly increased, and has been executed with dispatch. Heretofore, when the Commissioners made their returns to the City Register, their work on a street proceeding ended. But this has now been materially changed, both by law and by methods introduced which may be termed inter-departmental. The Department now handles hundreds of vouchers for the payment of property interests, a large number being for property acquired by condemnation under previous boards. Under the present arrangement, our work now ceases when the street is physically opened, and in the annex portion of Baltimore city when the street is paved.

Since the first of the year final returns have been made on thirty-three street proceedings, and the list of them printed in another part of this report gives the data necessary for the use of the public. The figures showing the various amounts of damages, benefits and sums placed as portion of the city's expense are as returned by us. The changes that occur as the result of court trials are not given for obvious reasons.

Credit must be given to the City Solicitor's Department for the promptness with which abstracts of property titles have been furnished.

In our Department some of the energetic manner of expediting public improvements that characterizes the administration has been reflected, and we have succeeded in disposing of seventy-four street proceedings since the present Mayor was inducted into office.

By comparison with previous reports of the Commissioners for Opening Streets, it will be seen that the amount of work that has passed through the office for the past two years is in excess of the amount of work that was done by previous boards during the preceding twenty years.

Hilton Street (Formerly Eleventh Street).

Opening and Paving.

The history of this operation demonstrates the dual capacity in which the Commissioners for Opening Streets frequently act, viz.: as Commissioners for Opening Streets as regards the acquisition of the property for the street, and as quasi-members of the Annex Improvement Commission (the duties of which last-named Commission have been superimposed upon the former), as regards the actual physical construction.

A brief sketch is in order, for this is one of the most important pieces of work now being accomplished by this Board, as will be more readily seen when we consider the facts.

The street was first projected in the year 1907, under Ordinance No. 261, approved April 29, 1907. The first return was made on June 5, 1909, but the final return was not made until April 5, 1910 (or ten months later). The damages and expenses attendant upon the acquisition of the property amounted to $31,596.10, while the benefits assessed amounted to $6,438.85, thus leaving $25,157.25 to be borne by the municipality.

It is to be noted that there was some delay in the opening, largely due to a controversy with the Pennsylvania Railroad on account of a line of the street as originally projected which, it was claimed by the railroad, would affect the tracks, etc., of their Washington branch, and in consequence, it was deemed advisable to have a readjustment of lines, necessitating a second ordinance, in order to avoid a lengthy litigation.

The physical creation of the street was begun on June 30, 1913, under Contract No. 118, which calls for a length of 4,752 feet, or nine-tenths of a mile (Edmondson avenue to Frederick road), at a width of forty feet, to be paved with sheet asphalt on a six-inch concrete base.

The width between building lines is seventy-five feet, but owing to an elaborate scheme of parking, the width between curbs is forty feet, as above stated. The estimated cost of this physical construction is $68,622.

The engineering problems and the necessary grading was a tedious work, and well illustrated the difficulties encountered in the construction of streets in the annex, and the time consumed occasioned thereby. Thus, in the grading of this street there were six cuts, necessitating the removal of some 36,000 cubic yards of earth and loose rock, and four fills, aggregating 58,000 cubic yards. The deepest fill was thirty-seven feet, which occurs just south of Edmondson avenue, at a point where Franklin street (if continued westwardly) would cross this opening; while the heaviest cut was some ten feet. Five culverts had to be constructed, the largest of which is ten feet by six feet of monolithic masonry, and 108 feet in length.

A glance at the map of the city, and a consideration of the topography of that section and of the through streets now available for traffic, demonstrates what has already been stated as to the great importance of this opening, for it is the only north and south opening between Frederick road and Edmondson avenue, from Pulaski street on the east to the western city boundary, and the only improved paving between Fulton avenue and the western city limits; and, connecting two of the main arteries of traffic, viz.: Edmondson avenue and Frederick road, will itself become a main artery of traffic north and south, as it becomes a connecting link for Caton avenue on the south and Poplar Grove street, which runs north from Edmondson avenue about two squares east of the said Hilton street.

The object of the Annex Improvement Commission is what its name denotes, but in the expenditure of the loan the Commission also has in view the return for investments made for street improvements by reason of the reclassification of property and the increased return in taxes occasioned thereby. Thus, by opening and paving streets we increase the rates of property under the terms of the Acts of 1908, Chapter 286, from rural to suburban, or from suburban to urban, as the case may be. Hilton street may be called an initial street opening and improvement, which will eventually bring large returns upon the investment by the reclassification of the property through which it runs, and more particularly when the area is further developed, and the interesecting cross streets are opened and paved, for as the street extends nine-tenths of a mile, the municipality will eventually acquire an increased rate of taxation through this entire area and on both sides of said street.

Among the noteworthy cases are the opening of Twenty-fifth street, from Greenmount avenue to the Harford road; Belair road, from North avenue to the eastern city limits; Green Spring Parkway, from the Reisterstown road to the northern city limits; Courtland street, from Franklin street to Centre street; Aisquith street, from Baltimore street to Fayette street; the opening of Ostend street, from Howard street to Plum alley; Liberty Heights avenue, from Reisters-

OPENING OF
25TH STREET.

town road to Callaway avenue; Hillen street, from the Fallsway to High street; and the Windsor Mill road, from the old city limits to Hilton street.

Twenty-fifth Street—Greenmount Avenue to Harford Road.

One of the most important condemnation and opening proceedings which has been undertaken by the city for some time is that of the opening of Twenty-fifth street, from the easternmost side of Greenmount avenue to the northwesternmost side of the Harford Turnpike road, at a width of 100 feet. This was done by the present Commissioners for Opening Streets, under Ordinance No. 416 of the Mayor and City Council of Baltimore, approved December 9, 1909.

This opening will bring in for development purposes a large area east of Greenmount avenue (formerly known as York road), and west of the Harford road, between North avenue on the south and Gorsuch avenue on the north. With the exception of a comparatively few squares of improved property, this intervening area is mostly undeveloped land, and comprises over a mile square in extent.

When it is considered that there is no direct opening or highway leading from Greenmount avenue, which is now the main north and south artery of traffic in that vicinity, to Harford road on the east, that is, no convenient cross street between North avenue on the south to Gorsuch avenue on the north (about a mile in length), the value of this opening to all of that section of the city is very great. It will be a continuation of Twenty-fifth street, which will serve to make an important thoroughfare through that whole section.

The opening has lain for some time before the Commission. It was ultimately taken up by the present Board and the final return was made on the fifth day of November, 1913.

BELAIR ROAD.

The widening of the Belair road will be a vast improvement to the northeastern section of the city, and when it is paved by the State Roads Commission (as contemplated) will be the means of giving a much needed, smooth thoroughfare from that section to the center of the city over the improved streets already constructed.

GREEN SPRING PARKWAY.

This large opening in the northern section means additional revenue to the city when physically opened, as builders are only waiting for this improvement to be actually accomplished before proceeding with developments on a large scale.

OSTEND STREET.

Ostend street, between Howard street and Plum alley, was opened for the purpose of giving a drive approach to the new bridge over the tracks of the Baltimore and Ohio Railroad in South Baltimore, constructed for the relief of grade crossings.

COURTLAND STREET.

The opening of Courtland street, between Franklin and Centre streets, is for the purpose of making a thoroughfare of what is now a "dead end" street. The cut shows the relief that will be afforded the increasing amount of traffic St. Paul street is now called upon to take care of.

AISQUITH STREET.

This street, opened between Baltimore and Fayette streets in the manner as illustrated, was for the relief of a dangerous situation existing in East Baltimore, where the pedestrian traffic was compelled to use a narrow street traversed by cars of the United Railways. The opening, long contemplated, is now an accomplished fact.

OPENING OF COURTLAND ST.

Liberty Heights Avenue.

The opening of this thoroughfare, between the Reisterstown road and Callaway avenue, is most important. When paved, Garrison avenue will be relieved of much of the heavy traffic which it now carries. Hardly any one opening in recent years is as important as this one. Openings such as these mean large returns in taxes.

Hillen Street Widening.

Hillen street widening, between the Fallsway and High street, is for the purpose of giving good hauling facilities to the freight yards in the vicinity of the Fallsway. From a narrow, congested street it has been converted into a street of the usual width of streets in the down-town section.

Among the other large improvements now being considered by the Commission are the Key Highway (a description of which is given), Gwynn's Falls Parkway, from the Reisterstown road to Gwynn's Falls Park, which is in the park scheme and over a mile and a half in length; the opening of Covington street, from Ostend street to Gittings street; and the opening of Warwick avenue in West Baltimore, extending from Baltimore street to Edmondson avenue, which when physically opened and paved will be the westernmost thoroughfare connecting those important highways.

Windsor Mill Road Closing.

(From the Former Western Boundary Line to Hilton Street.)

From time to time, as the city grew to the west and northwest, this old road gave way to the march of progress. It has been closed between the points named above, and its interference with the rectangular lay-out of streets in this section has passed. It is now rapidly being built up with a good class of dwellings, and the unsightly conditions in the immediately contiguous territory are fast disappearing. After it leaves Hilton street, the western point of closing, it appears at this time, that no one will care to disturb it; fine residences line its course, and, as it strays through the Windsor Hills it has a natural beauty of its own. If one has the inclination, almost its entire length (from a point where the seven mills, built all in a row, at Windsor and which gave it its name) can be traced down through the city to where it crossed Jones Falls when Baltimore was a village. It followed the easy curves and passed around the bases of the hills, took in what is now Dark Lane and is responsible for the crookedness of Saratoga street from Gay street west. An eminent examiner of titles has declared that this was once an Indian trail, well defined, and that it led past the stockade, then built near where the Y. M. C. A. building stands at Charles and Saratoga streets to protect the inhabitants from the raids of the Susquehannas, over the land occupied by old St. Paul's Church, and so on down over the meadows where the stream then flowed across Calvert street at the foot of the hill.

Gwynn's Falls Parkway.

The proceedings for the opening of this street have laid in this office for a number of years, and were not taken up for consideration until this year. The opening is a park scheme, and when completed, will extend from the Reisterstown road to Gwynn's Falls Park. A large number of expensive properties are taken in this opening, and while the final return has not yet been made, at the time of writing this report the same is expected to be filed with the City Register about the latter part of January. This opening will provide a boulevard 120 feet in width. It was designed by the Olmstead Brothers of Boston, and provides large circles of 200 feet in diameter at certain points, and where it meets Gwynn's Falls Park at its western end, will be over 400 feet in width.

OPENING OF

COVINGTON STREET.

OSTEND ST. TO GITTINGS ST.

C.W.K.

Covington Street Opening.

(From Ostend to Gittings Streets.)

This opening, while not a long one, being only some 298.55 feet in length, is highly necessary, since it serves to connect the two parts of the same street, and is the link which serves to complete Covington street—a street which will now extend from Donaldson street to Hughes street.

This opening runs partly on the bed of an older Covington street, whose lines were northwardly and direct projections of the lines of that portion of the street south of Gittings street. If the street had been constructed on these old lines it would happen that the east side of the street, as extended, would be on the west side of Covington street at Ostend; so in order to make a proper connection, it became necessary to make a slight angle, which necessitated this condemnation proceeding, as otherwise the city claims the bed of the older projected Covington street between these points.

The physical construction of the street belongs to other departments, as the Commissioners for Opening Streets, acting as Annex Improvement Commission, only physically constructs streets in the Annex portion of Baltimore city, and this street is in the old line of the municipality.

We are glad to report that actual construction work has been started on Thirty-third street, and the work is progressing favorably.

Along with this work has proceeded the paving of streets in the Annex. During the year the engineering forces of the Department have paved forty-five streets which, calculated on a basis of thirty feet in width, totals nearly eight miles of finished roadway. While the mileage does not appear large by comparison with the work of other departments, the fact that street paving in the Annex is in almost every instance through territory that is practically virgin, must not be overlooked.

A glance at the pictures printed in the Engineer's report shows the obstacles encountered. The practical construction of paving in the Annex becomes very heavy and difficult at times, owing to the uneven laying condition of the land, and in carrying out the work it frequently becomes necessary to cope with the removal of heavy excavations and the filling in of enormous ravines, the construction of important and expensive culverts, etc. Fills, sometimes thirty-seven feet in height, have to be made in some cases, and the necessary drainage has to be provided for. A study of the tables given will show the large amount of grading necessary to be done before the surface of the streets can be laid.

Since the commencement of paving by the Department under the old loan, together with that under the present loan, the records of the Commission show a total of forty-eight miles of streets paved on a basis of thirty-foot width.

The taxable basis of the city has been raised many millions of dollars by reason of such paving. In a consideration of the paving of streets in the Annex, the Commission has adhered closely to the policy of increasing the tax rate and has kept in touch with the Appeal Tax Court, with which we advise as to streets, which if improved, would bring about the results desired.

The map attached to the report shows in red the streets paved under the direction of the Board.

Approved February 10, 1913.

No. 384—An ordinance confirming and declaring the name of the thoroughfare heretofore and now known as Belmont avenue, from Poplar Grove street to Rosedale avenue, or Ninth street, to be Belmont avenue and changing the legal name of Lorman street, between Poplar Grove street and Rosedale avenue, or Ninth street, to Belmont avenue. Approved December 30, 1913.

LAWS RELATING TO COMMISSIONERS FOR OPENING STREETS AND THE ANNEX IMPROVEMENT COMMISSION.

Act 1898, Ch. 123; 1912, Ch. 32.

Section 172. The Commissioners for Opening Streets shall be the second Sub-Department of Review and Assessment, and the head of this sub-department shall be a board composed of three persons, appointed by the Mayor in the manner prescribed in Section 25 of this article, and removable as therein provided. One of their number shall be president, and shall be so designated when appointed by the Mayor. Their term of office shall be for three years, one Commissioner to retire every year; except that the Commissioners first appointed shall determine by lot their terms of office, so as to provide for the termination of the term of one Commissioner each at the end of the first and second years. The said Commissioners shall receive a salary of one thousand, eight hundred dollars each per annum, payable monthly. The said Commissioners shall be charged with the duty of opening, extending, widening, straightening and, if the ordinance so provides, grading or closing any street, lane, alley or part thereof, situated in Baltimore city whenever the same shall have been directed by ordinance to be done, and shall perform such other duties as the Mayor and City Council of Baltimore may, by ordinance prescribe. The said Commissioners shall appoint a clerk, who shall be paid a salary of one thousand five hundred dollars per annum, payable monthly, and shall perform such duties as the Commissioners may prescribe. The said Commissioners may also appoint such other employees as the Mayor and City Council of Baltimore by ordinance may direct, and fix their compensation, not to exceed in the aggregate the amount appropriated by ordinance.

Section 173. The clerk of said Commissioners shall keep a record of their proceedings in a book provided for the purpose, and in such form as the City Solicitor may prescribe; and the said clerk shall record in said book all orders made by the Commissioners in regard to the performance of their duties, and make true copies of all notices by them directed to be published, and of the certificate of the publication thereof, and shall perform such other clerical duties as the said Commissioners shall require.

Act 1898, Ch. 123; 1912, Ch. 32.

Section 174. When the said Commissioners shall assess a sum of money to be paid by any person or persons, for benefits derived by such person or persons from opening, extending, widening, straightening, grading, curbing or closing any street, lane or alley, or part thereof, and shall assess a sum of money to be paid to the same person or persons for damages sustained by said opening, extending, widening, straightening or closing, it shall and may be lawful, upon a certificate of title from the City Solicitor, for the City Register or City Collector to receive from such person or persons an assignment for the sum or sums so assessed as damages aforesaid.

Act 1898, Ch. 123; 1912, Ch. 32.

Section 175. Whenever the Mayor and City Council shall hereafter by ordinance direct the Commissioners for Opening Streets to lay out, open, extend, widen, straighten, grade or close up, in whole or in part, any street, square, lane or alley, within the bounds of this city, the said Commissioners, having given the notice required by law of their first meeting to execute the same, shall meet at the time and place mentioned in said notice, and from time to time thereafter, as may be necessary, to exercise the powers and perform the duties required of them by said ordinance, and shall ascertain whether any and what amount of value in damage will be caused to the owner of any right or interest in any ground or improvements within or adjacent to the City of Baltimore by such opening, extending, widening, straightening or closing for which, taking into consideration all advantages and disadvantages, such owner ought to be compensated; and the said Commissioners having ascertained the whole amount of damages for which compensation ought to be awarded, as aforesaid, and having added thereto an estimate of the probable amount of expenses which will be incurred by them in the performance of the duties required of them as aforesaid; in which they may include a sum sufficient in their judgment to cover the expenses and contingencies of litigation, and administration expenses; shall proceed to assess all the ground and improvements within and adjacent to the city, the owners of which, as such, the said Commissioners shall decide and deem to be directly benefited by accomplishing the object authorized in the ordinance aforesaid; and should the direct benefits, assessed as aforesaid, not be equal to the damages and expenses incurred, the balance of said expenses and damages shall be paid by the City Register, and provided for in the general levy, or out of funds derived from loans, if properly applicable thereto.

Act 1898, Ch. 123; 1900, Ch. 109.

Section 176. In every case where it shall be necessary in order to effect the object proposed under any of the ordinances providing for the laying out, opening, widening or straightening in whole or in part any street, square, lane or alley, that a portion only of a lot or of a lot and improvements shall be taken and used or destroyed, and the owner or owners thereof shall claim to be compensated for the whole, the said Commissioners in such cases may, if they deem it best, and not otherwise, accept a surrender in writing of the whole of said lot and improvements, or the whole of said improvements, from said owner or owners, in which event the said Commissioners shall ascertain the full value thereof, as if the whole lot or lots and improvement or improvements, as the case may be, were necessary to be taken and used for such proposed object, and the whole amount of such valuation when finally decided on shall be paid or tendered to the said owner or owners before any part thereof shall be destroyed, removed or used, unless such owner or owners shall assent thereto in writing, as now provided for by law; and the said Commissioners, after giving ten days' notice in two of the daily newspapers of the city of the time, place, manner and terms of sale, shall sell by public auction to the highest bidder the materials of any house or houses which it shall be necessary to remove, in whole or in part, and also the residue of any lot of which a part shall be taken and used to effect the object confided to the Commissioners, and which residue shall have been, with the consent of the Commissioners aforesaid, surrendered by the owners thereof as aforesaid; the purchase money to be paid when full possession shall be given of the property or material so sold, and the said Commissioners or a majority of them on receiving the purchase money aforesaid, and not before, shall by a good and sufficient deed convey the lot or lots of ground by them so sold to the purchaser; but no such sales shall be made until after the Commissioners have assessed the entire amount of damages and expenses as are now directed to be assessed by existing ordinances relating to the condemnation of streets, nor until all damages for taking said property shall have been paid or tendered to the proper party or parties or invested or paid into Court as by law required, nor until the said Commissioners are ready and able to give possession to the said purchaser or purchasers of property and materials aforesaid, and the said Commissioners are duly empowered to take and receive a good and sufficient bond from the purchaser or purchasers aforesaid, with a penalty to the Mayor and City Council of Baltimore, conditioned that the purchase money be duly paid at such time as the said Commissioners shall demand the same, and conditioned further that said purchaser or purchasers shall remove within sixty days after notice from the said Commissioners, from the bed of the street all such materials so sold, and all rubbish or other obstructions in said street occasioned thereby; and in the event of the purchaser or purchasers not complying with the terms of said sale, the Commissioners shall resell the said lot or lots and improvement or improvements, as the case may be, at the risk of the former purchaser, or purchasers, giving not less than five days' notice of said resale in two of the daily newspapers of the city aforesaid; provided, however, that where, in the judgment of said Commissioners, a part only of the whole of a lot or a part of the whole of the improvements of any lot can be taken without destroying the whole of said lot or said improvements, for the purpose for which lot or improvements are used, or for building purposes, the said Commissioners shall only condemn such part of said whole lot or improvements as is necessary for the proposed object, and shall award to the owner or owners of the part of the lot or improvements so taken such damages and assess upon the remainder thereof such benefits as in their judgment shall be right and proper; and provided, further, that in all cases where there are sheds or other obstructions lying and being in beds of streets, lanes, roads or alleys, in process of opening or widening, where the same will not, in the judgment of the Commissioners for Opening Streets, sell by public auction for the amount of the expenses of said sale, then the said Commissioners for Opening Streets may, and they are hereby authorized, to sell the same at private sale.

Act 1898, Ch. 123; 1912, Ch. 32.

Section 177. As soon as the Commissioners aforesaid shall have completed the valuation of damages to be ascertained by them as directed by this article, they shall cause a statement thereof to be made out for the inspection of all persons desiring information of its contents, and such statement, together with an explanatory map or maps, shall contain a description of each separate lot or parcel of ground deemed to have sustained damages, its dimensions, the name of the street, lane or alley on which it bounds, the names of all persons supposed to have any estate or interest in it, and the amount of damages as value by the Commissioners; and if there be any house or other improvements on it, necessary to be removed, in whole or in part, such description thereof as the Commissioners shall deem necessary; and in like manner a description of each parcel of ground deemed by the Commissioners to be benefited, the name or names of such person or persons as may be supposed to have any estate or interest therein, and the amount assessed thereon for benefits; and the said Commissioners shall cause a notice to be published for four successive days in two daily newspapers of the city stating the extent of the ground covered by the assessment, and that such statement and maps are ready for the inspection of all persons interested therein and that the Commissioners will meet at their office on a day named in said notice, which shall be not less than five nor more than ten days after the first publication of such notice, for the purpose of reviewing any of the matters contained in such statement to which any person claiming to be interested shall make objection; and the Commissioners shall meet at the time and place so appointed, and shall hear and consider all such representations or testimony on oath or affirmation, verbal or in writing, in relation to any matter in said statement which shall be offered to them on behalf of any person claiming to be interested therein, and the said Commissioners shall make all such corrections and alterations in the valuations, assessments and estimates, and all other matters contained in the said statements and explanatory map or maps aforesaid, as in their judgment shall appear to them, or a majority of them, to be just and proper; and they may adjourn, from day to day, if necessary, to give all parties claiming a review an opportunity to be heard, not exceeding in the whole ten days; and after closing such review the Commissioners shall make all such corrections in their statement and explanatory map or maps as they shall deem proper, and cause such statement as corrected to be recorded in their book of proceedings, and certified under the hands and seals of said Commissioners and their clerk, and notify all persons interested by an advertisement, to be inserted once a week for four successive weeks, in two of the daily newspapers of the city that the said assessments have been completed, and that the parties affected thereby are entitled to appeal therefrom by petition in writing to the Baltimore City Court within thirty days after the first publication of said notice.

Act 1898, Ch. 123; 1912, Ch. 32.

Section 178. It shall be the duty of the clerk of the Commissioners for Opening Streets to serve written or printed notices upon each and every party or parties assessed for damages, caused by the condemnation and opening of any public highway; provided, however, that the service of such notices shall not be so construed as to be one of the prerequisites to the condemnation and opening of any street under any ordinance heretofore passed, or hereafter to be passed.

Act 1898, Ch. 123; 1912, Ch. 32.

Section 179. The Mayor and City Council of Baltimore or any person or persons, or corporations, who may be dissatisfied with the assessment of damages or benefits, as hereinbefore provided, may, within thirty days after the first publication of the notice provided in Section 177, appeal by petition, in writing, to the Baltimore City Court, praying the said Court to review the same, and on any such appeal the Court shall appoint a day for hearing said appeal, which shall not be less than five nor more than thirty days after the expiration of the thirty days limited for taking appeals as aforesaid, and shall direct the Clerk of the said Court to issue a subpoena *duces tecum* to the clerk of the Commissioners for Opening Streets, requiring him to produce and deliver to said Court the record of the proceedings of the said Commissioners in the case, and all maps, plats, documents and papers connected with such record, and the said City Court shall have full power to hear and fully examine the subject, and decide on the said appeal, and for that purpose is hereby authorized and empowered to adjourn from time to time, and may cause all such appeals to be consolidated, or may hear and decide them separately, and may require the said Commissioners, their clerk, surveyor, or other agents and servants, or any of them, and all such other persons as the Court shall deem necessary, to attend, and examine them on oath or affirmation, and may permit and require all such explanations, amendments and additions to be made to and of the said record of the proceedings as the said Court shall deem requisite; and the persons appealing to the Baltimore City Court, as aforesaid, shall be secured in the right of a jury trial, and the said Court shall direct the Sheriff of Baltimore City to summon twelve or more persons qualified to be jurors, and shall impanel any twelve disinterested persons so summoned, or attending Court, to try any question of facts, and if necessary to view any property in the city, or adjacent thereto, to ascertain and decide on the amount of damages or benefits, under the direction of the Court; and the said Court shall not reject or set aside the record of the proceedings of the said Commissioners for any defect or omission in either form or substance, but shall amend or supply all such defects and omissions and increase or reduce the amount of damages and benfits assessed, and alter, modify and correct the said return of proceedings, in all or any of its parts, as the said Court shall deem just and proper, and shall cause the proceedings and decisions on said returns and appeals to be entered in the books containing the record of the proceedings of the Commissioners, certified by the clerk, under the seal of the Court, and the book to be transmitted to the said Commissioners, which shall be final and conclusive in every respect, unless an appeal be taken to the Court of Appeals, and such record book, or a copy of the proceedings therein, or any part of such proceedings, whether in Court or out of Court, certified by the said Commissioners under their hands, shall be evidence in any Court in this State, and the Judge of the Baltimore City Court shall have full power, in his discretion, to add the reasonable costs of any appeal, to be taxed by him, or any part thereof, to the damages to be collected for opening or closing said street or to require such cost, or any part thereof, to be paid by all or by either of the appellants, as the circumstances of such appeal, in his opinion, shall justify. Upon every appeal to the Baltimore City Court from any action of the Commissioners for Opening Streets both the damages and benefits assessed by the Commissioners to the appellant shall be open for review and correction by the said City Court.

Act 1898, Ch. 123; 1912, Ch. 32.

Section 180. Whenever any ordinance passed by the Mayor and City Council of Baltimore, providing for the condemnation and opening, extending, widening, grading or closing of any street, lane or alley in said city shall be set aside, or declared null and void by a Court of competent jurisdiction, to wit: the Baltimore City Court or the Court of Appeals, in the event of an appeal to that tribunal, or the same shall be repealed by the city, it shall be the duty of the Comptroller immediately thereafter to draw his warrant on the City Register in favor of any and all persons or their legal representatives, who may have paid into the city treasury any sum or sums of money on account thereof; which shall be forthwith paid out of any sums in the treasury not otherwise appropriated. The Comptroller shall likewise draw his warrant on the City Register for the payment of all expenses which may have been incurred by virtue of any such ordinance in carrying out the provisions thereof, for which the city may be liable under existing ordinances.

Act 1898, Ch. 123; 1912, Ch. 32.

Section 181. If no appeal shall have been prayed, then within ten days after the time hereinbefore limited therefor, or after the return of the decision upon any appeal shall have been made to the said Commissioners, their return shall be transferred to the City Collector, who shall proceed forthwith to notify the parties assessed for benefits by means of bills specifying the several sums so assessed, and warning them that if the same be not paid within two months from the date of such transfer of said Commissioners' returns, he will proceed to sell the specific pieces or parts of property on which said unpaid sum or sums of money shall have been assessed, in the manner, and after having given the notice directed by this article.

Act 1898, Ch. 123; 1912, Ch. 32.

Section 182. If the sums assessed upon the property specified shall not be paid within the time above limited, the City Collector is hereby directed to sell the property, or any part thereof, on which such assessment has been laid, giving thirty days' notice of said sale in two of the daily newspapers published in the City of Baltimore, the first insertion of said notice to be made in said newspapers promptly after the expiration of the time limited in this article for the payment of said benefits; and the moneys so collected by the City Collector shall be paid over by him to the city as other moneys are directed to be paid over.

Act 1898, Ch. 123; 1912, Ch. 32.

Section 183. In all cases in which the City Collector shall sell any property on account of the non-payment of assessments made for the opening, closing, widening, grading or extension of any street, lane or alley, it shall be his duty to sell said property to the extent and subject to the same conditons which are provided by ordinance for the sale of real estate in the City of Baltimore, charged with the payment of other taxes imposed by this corporation; and in the event of the purchaser or purchasers failing forthwith to comply with the terms of said sale, the City Collector shall resell the same at the risk of the former purchaser, giving not less than ten days' notice in two of the daily newspapers of the city aforesaid; and after collecting the benefit assessments he shall forthwith return the said Commissioners' proceedings to the Comptroller.

Section 184. The City Collector, on receiving the full amount of the purchase money on such sale, shall execute a deed of conveyance in favor of the purchaser or purchasers, or their assign or assigns, which deed shall convey a fee simple or leasehold estate, as the case may be, in and to such property, and after deducting the costs of sales, advertising and other necessary expenses, he shall pay the balance of such purchase money to the city, which shall pay over the said balance, after deducting the amount assessed on said property, to the person or persons entitled thereto, on demand without interest.

Section 185. All sums of money assessed by the Commissioners aforesaid, upon property deemed by them to be benefited, shall be and continue liens on each several piece of property so assessed, to the amount of its particular assessment, until the same shall be paid to the city; but no part of any street, square, lane or alley shall be opened on or over the ground of any person or persons, or corporation, adjudged by the Commissioners to be entitled to damages for said opening, without the consent, in writing, of the person or corporation so entitled, until such damages shall be paid, or the amount thereof invested in the city stock, for the use of each person or corporation entitled to any part of the compensation for such damages, to the amount of his, her or their respective right and interest therein, of which investment the City Register's certificate, under the corporate seal of the city, shall be competent proof.

Section 186. Any person or persons not claiming title to any lot or piece of property upon which any sums shall be assessed, as aforesaid, may pay the amount of the sum so assessed, within the time limited, to the City Register, and obtain his certificate of having paid such sum without claiming title to the property; and such payment shall vest in the person or persons paying his, her or their heirs, the lien on such lot or property mentioned in this article.

Section 187. If it should so happen that any one or more of said Commissioners should be interested in any particular case, the Mayor shall make a temporary appointment of a Commissioner or Commissioners, to act in the place and stead of such interested Commissioner or Commissioners, who shall take the oath or affirmation, as the case may be, and in all respects conduct himself and have all the powers as the other Commissioners who are appointed by the Mayor.

Section 188. Whenever any lot, or part of a lot, or parcel of ground may be taken and included within the lines of any street, lane or alley, or part thereof, and damages assessed therefor, and there shall be an outstanding unexpired term of years therein, the said Commissioners shall discriminate in their proceedings between the value of fee simple or ground rent interest, and the leasehold interest.

Act 1898, Ch. 123; 1912, Ch. 32.

Section 189. Whenever any obstruction shall have remained in any street, lane or alley, or part thereof so opened, for the space of sixty days after the proceedings of the said Commissioners shall have been completed, it shall be the duty of said Commissioners to cause the same to be removed and to draw on the Register for the expense so incurred, which shall be paid by him, and the Mayor shall forthwith cause a suit for the recovery of said expenses to be instituted against the person or persons by whose default the said obstruction has been suffered to remain, and the same, when recovered, shall be paid to the Register for the use of the city.

Section 190. (Repealed, Act 1912, Ch. 32.)

Act 1898, Ch. 123; 1912, Ch. 32.

Section 191. When the proceedings of the Commissioners for Opening Streets in any case are transferred to the City Collector, the City Register is authorized and required to pay all the expenses incurred by the Commissioners under the said proceedings. But such expenses shall not remain unpaid more than six months after the completion of any services performed under said ordinance; and the Comptroller and Register are directed to pay, within six months after the services have been completed, any such expenses upon presentation of the proper vouchers or certificates from the Commissioners for Opening Streets.

Section 192. (Repealed, Act 1912, Ch. 32.)

Section 193. Whenever the owner or owners of the bed of any of the streets, lanes or alleys of the city, as laid out on Poppleton's Plat, or on such plat as the city may adopt, for the territory annexed under the Act of 1888, Chapter 98, shall offer to convey the same to the city, it shall be the duty of the Mayor to obtain the opinion of the City Solicitor in relation to the title to the property and the legality of the deed or deeds, and, if in the opinion of the Mayor, it will be right and proper, and the public good will result therefrom, he is hereby authorized to receive, in the name of the Mayor and City Council of Baltimore, any deed or deeds so offered to the city; provided, that no deed shall be for less than one whole square, and that the city shall not incur any expense in receiving the same; and that a plat setting forth the location, together with the surrounding property, to the extent of two hundred feet, shall accompany said deed.

Section 194. Whenever any street, lane or alley, or part thereof, shall be conveyed to the city, as provided in the preceding section, the same shall be a public highway, subject to all ordinances and resolutions relating to streets, lanes and alleys in the City of Baltimore.

Section 195. The Mayor and City Council of Baltimore will not entertain any petition or remonstrance against the opening, widening, straightening or closing of any street, lane, or alley in the City of Baltimore, unless the signers of such petition or remonstrance shall state the location of the property they represent, together with the number of front feet of the same.

Act 1898, Ch. 123; 1906, Ch. 25.

Section 827. Whenever any property shall have been condemned in any form of proceeding for the use of the Mayor and City Council of Baltimore, and in consequence of infancy, insanity or absence from the city of any person or persons entitled to receive any money awarded in any such proceedings, conflicting claims, refusal to accept, or any other cause, such money can not be safely and reasonably paid to any person or persons, it shall be lawful for the Mayor and City Council of Baltimore to file a bill or petition in any court of equity in the city or county where the property is condemned, or any portion thereof lies, and whenever such court shall be satisfied that, for any of the reasons aforesaid, that said Mayor and City Council of Baltimore should be permitted to pay the said money into such court, it shall pass such decree as it shall deem proper, and the payment of any money into court under any such decree or order shall be considered in all respects equivalent to a tender thereof to any person or persons entitled to such money, and who may be made a party or parties to such proceeding, and upon making such payment, the Mayor and City Council of Baltimore shall be thereby released from all further liability for the money awarded as aforesaid to any person or persons who may be made a party or parties to such proceeding as aforesaid; and in all cases when one or more persons is or are entitled to an estate for life or years, or an estate tail, fee simple, conditional, base or qualified fee, or any other particular, limited or conditional estate in property condemned as aforesaid, and any person or persons is or are entitled to a remainder or remainders, vested or contingent, or an executory devise or devises, or any other interest, vested or contingent, in the same property, if all persons in being who would be entitled to the said property if the contingency had happened at the date of the filing of the aforesaid bill or petition, shall be made parties to such proceeding, the payment into court of the money awarded for such property shall bind all persons, whether in being or not, who claim or may claim any interest in the said property under any of the parties to the said cause, or under any person from whom any of the parties thereto claim or from or under or by the original deed or will by which such particular, limited or conditional estates with remainders or executory devises were created, and the said Mayor and City Council of Baltimore shall, upon making such payment, be thereby released from all further liability for the money awarded as aforesaid.

Act 1898, Ch. 123; 1912, Ch. 32.

Section 828. Before they shall pass any ordinance under Section 6 of this article, paragraph, "Streets, Bridges and Highways" relating to the laying out, opening, extending, widening, straightening, or closing up, in whole or in part, of any street, square, lane or alley within Baltimore city, notice shall be given by advertisement published twice a week for two consecutive weeks, in two of the daily newspapers in the said city, that application shall be made for the passage of such ordinance, which notice shall set forth clearly, in the case of laying out, opening or extending any street, square, lane or alley, the length or width of such street, square, lane or alley, or part thereof to be laid out, opened or extended, and, in the case of widening or straightening shall set forth clearly both the present and the intended width, and also the length of any street, lane or alley or part thereof intended to be widened or straightened, and in case of closing shall set forth clearly the length and width of the street, lane or alley, or any part thereof, intended to be closed; and notice shall also be given by filing, in the office of the Commissioners for Opening Streets, on or before the first day of such publication, a map on the scale, not smaller than fifty feet to the inch, prepared by some competent surveyor, whose name shall be signed to the same, which, in case of laying out, opening, extending, widening or straightening, shall show the course and the lines of the projected improvement, and also the lots and buildings thereon which shall be taken or destroyed, in whole or in part, and which, in the case of closing, shall show the street, lane, or alley, or part thereof, intended to be closed, and also the abutting lots and improvements thereon. It shall be the duty of the Commissioners to endorse on said map their names, with the date of it being filed in their office, and to keep the said map where the public may have access to it, whenever said map may be needed for the purpose of being shown at any meeting of the City Council, or of any committee thereof, they may, on the written order or request of the President of either Branch of the City Council, or of the chairman of such committee, and, on obtaining his receipt therefor, allow the said map to be taken from their office for that purpose, to be returned on the following day. At any time before the final passage of said ordinance, said map and said ordinance may be amended, provided such amendment shall not substantially depart from the published notice, so as to substantially affect parties who would not be warned by such notice.

Act 1898, Ch. 123; 1912, Ch. 32.

Section 829. Before any Commissioners appointed by any ordinance of said corporation, under the two preceding sections, shall proceed to the performance of their duty, they shall give notice in at least two of the daily newspapers in the City of Baltimore of the object of the ordinance under which they propose to act, at least ten days before the time of their first meeting to execute the same.

Section 830. A tenant for ninety-nine years, or for ninety-nine years, renewable forever, or the executor or administrator of such tenant, or the guardian of an infant owner, or a mortgagee in possession, shall be deemed and taken as an owner for the purposes of any application to the Mayor and City Council authorized by this sub-division of this article; and the application of any such person shall bind the property so represented for any assessment or tax made under an ordinance passed in pursuance of the provisions of this sub-division of this article.

Section 831. Where real estate within the said city has been or may be divided according to law among heirs, legatees, joint tenants or tenants in common, entitled to the same, and such division calls for any of the streets, lanes or alleys, or any part thereof surveyed and laid off under the Act of 1817, Chapter 148, or reserves any of the streets, lanes or alleys, or any part thereof, as open, and divides such estate with reference thereto, the Mayor and City Council of Baltimore may, on application of one or more persons interested in the ground to be taken on such application, adopt and sanction by ordinance the principle under which such division was had, and open any of the said streets, lanes or alleys, or any parts thereof, in the said division reserved or recognized; provided, at least one week's notice in the newspapers of said city (the cost of the advertisement to be paid by the applicants), be given of such application before any such ordinance shall pass.

Section 832. All the streets, lanes or alleys opened in the manner directed in the preceding section shall be public highways, and be subject to the laws, regulations and ordinances applicable to public streets, lanes or alleys, or parts thereof, in said city.

Section 2. And be it further enacted, That this Act shall take effect from the date of its passage, but nothing herein contained shall be construed to affect any right or liability of any party accrued, or any proceedings begun, or pending, prior to the passage of this Act, but all such rights shall remain and such proceedings shall continue, in the same manner, and to be of the same effect, as if the provisions herein above mentioned had remained as they were prior to the passage of this Act. Approved March 14, 1912.

Acts 1898, Ch. 123; 1902, Ch. 453; 1904, Ch. 433; 1906, Ch. 158.

Section 840. No avenues, streets or alleys within the territory annexed to the City of Baltimore by the Act of 1888, Chapter 98, shall hereafter be opened, established or condemned, nor shall the dedication of any avenue, street or alley in said territory be hereafter accepted by the Mayor and City Council of Baltimore unless the same shall be approved in writing by the Topographical Survey Commission, consisting of the Mayor, Comptroller and Register of the City of Baltimore, or unless the said avenues, streets or alleys be so opened, established, condemned or dedicated that the lines and grades thereof shall conform to the general plan of streets for the annex as adopted under Ordinance No. 129, approved December 3, 1898, or as said plan shall be amended in accordance with the provisions of this section—that is to say, with the approval of the aforesaid Topographical Survey Commission—the Mayor and City Council of Baltimore may by ordinance, from time to time and in any manner, alter or amend the said general plan of streets, and the said Mayor and City Council of Baltimore may thereafter by ordinance open, establish or condemn, or the Mayor of Baltimore city may receive a deed for any avenue, street or alley laid down on the said general plan of streets as amended; or if any such avenue, street or alley shall be dedicated, the same may thereafter be accepted; said Topographical Survey Commission is hereby authorized to make such rules and regulations regarding surveys, plats or plans relating to the location of avenues, streets or alleys as they may deem proper from time to time.

Note—Changes in the law effected by the Act of 1912, Chapter 32, take effect from the date of the passage of said Act, to wit: March 14, 1912. Vide said Section 2:

ANNEX IMPROVEMENT COMMISSION.

Acts 1910, Ch. 736; folio 607, etc.

An Act to authorize and empower the Mayor and City Council of Baltimore to issue its stock to an amount not exceeding two million five hundred thousand ($2,500,000) dollars, for the purpose of defraying the costs and expenses of condemning, laying out, opening, extending, widening, straightening, closing, grading, paving and curbing any street, avenue, lane or alley or part thereof, in the annex portion of said city, and for establishing the building lines and the width of the sidewalks on any street, avenue, lane or alley or part thereof in said annex portion of the city; to authorize the submission of an ordinance to that end to the legal voters of the City of Baltimore to constitute the Commissioners for Opening Streets a Commission to carry out said work and defining the powers and duties and the procedure of such Commission, and providing also for the improvement of the sidewalks in said annex portion of the city at the expense of the property owners and for grading, paving and curbing such streets, avenues, lanes and alleys in whole or in part at the expense of the adjacent property upon the request of the owners of a majority of the front feet thereof.

SECTION 1. Be it enacted by the General Assembly of Maryland, That the Commissioners for Opening Streets of the City of Baltimore are hereby constituted a Commission to be known as the Annex Improvement Commission, and as such in addition to their ordinary duties are hereby vested and clothed with all the powers and rights in this Act contained, and are hereby authorized, empowered and directed to carry into effect all the provisions of this Act. As compensation for their services hereunder the Mayor and City Council of Baltimore may in its discretion award the said Commissioners such annual sum as it may deem proper in addition to the compensation to which they are respectively entitled for discharging the ordinary duties of their office, provided that the total compensation received by each of said Commissioners shall in no event exceed the sum of two thousand five hundred ($2,500) dollars per annum. The clerk of said Commissioners shall act as their secretary in connection with the powers and duties hereby conferred, and for his services in this connection, the Mayor and City Council of Baltimore may, in its discretion, award him such annual sum as it may deem proper, in addition to the compensation to which he is entitled for discharging the ordinary duties of his office as clerk; provided that his total compensation shall in no event exceed the sum of two thousand ($2,000) dollars per annum.

The said secretary shall keep a record of all proceedings of the Commission, and shall enter in a well-bound book and carefully preserved, neat, legible and accurate minutes of all meetings of the Commission, and he shall perform all such other duties as usually appertain to the office of secretary of a private corporation, or as may be imposed upon him by this Act or as may be assigned to him by the Commission, shall annually make to the Mayor a detailed report of all its official transactions and expenditures. The said Commission shall have authority and power, subject to the approval or ratification of the Board of Estimates, to employ any help or assistance necessary to promote the object and purpose of this Commission and its work, and to fix the compensation of such help and to remove or discharge them at their pleasure; also to purchase necessary office furniture and stationery.

SEC. 2. And be it further enacted, That upon the completion by the Annex Improvement Commission created by Chapter 274 of the Acts of the General Assembly of Maryland or of 1904 (the power and functions of which Commission have been and are being exercised by the Commissioners for Opening Streets pursuant to Ordinance No. 216, of the Mayor and City Council of Baltimore, approved March 6, 1905) of all its work pending at the time of the approval by the people of the loan hereby authorized, the said Commission shall be taken to have been superseded in every respect by the Commission hereby created, shall thereupon be entitled to the possession and custody of all maps, plats, blue-prints, sketches, surveys, books, papers, documents, writings, letters and chattels of and belonging to said former Commission, and also to any unexpended balance remaining out of the proceeds of the said loan authorized by the said Act of 1904, which unexpended balance, if any, shall be placed to the credit of the special fund hereinafter provided for and used by the Commission created by this Act in the manner authorized by this Act, for carrying out any of the powers and duties hereby conferred.

SEC. 3. And be it enacted, That said Commission shall have the right and power and under and in pursuance of any general or special ordinance or ordinances of the Mayor and City Council of Baltimore which may be passed therefor to grade and pave any street, avenue, lane or alley or any part thereof from curb to curb, and to establish and fix the building line and the width of the sidewalk on any street, avenue, lane or alley now existing or to be laid out, opened, extended, widened, straightened, grade or pave in the annex portion of the City of Baltimore. "That said Commission shall have all powers necessary and proper in the exercise of said powers; and the Mayor and City

Council of Baltimore are hereby authorized and empowered to grant by ordinance any further powers and duties it shall deem necessary for the proper execution of the improvements intended to be made by this Act."

SEC. 4. And be it enacted, That all work done on supplies or materials purchased in carrying out the purposes of this Act, when involving an expenditure of five hundred ($500) dollars or more, shall be by contract awarded by the Board afterwards to the lowest responsible bidder, in accordance with the provisions of Sections 14 and 15 of Article 4, entitled "City of Baltimore," of the Public Local Laws of Maryland, including the powers conferred by said Section 15 upon the Board of Awards to select the particular thing to be adopted in the cast of alternative bids; provided, however, that the Mayor and City Council shall have the power to prescribe by ordinance as to any particular street or streets that the contract for paving or curbing, repaving or recurbing the same shall be awarded to the lowest responsible bidder complying with the call for bids, whether bids are asked for for one or more than one kind of pavement, reserving to the Board of Awards the right to reject all bids and to call for new bids.

SEC. 5. And be it further enacted, That the said Commission hereby created shall be the agent of the Mayor and City Council of Baltimore to acquire by gift, purchase, lease, whatever the duration of the lease, or other methods of acquisition, or by condemnation, any private property whatsoever, including streets, avenues, lanes and alleys, right or interests, franchises, privileges or easements, that may be required to open, widen, extend, straighten, close, grade or pave any street, avenue, lane or alley, or to broaden any sidewalk, and as soon as the title of the property acquired as set forth herein has been certified by the City Solicitor, said Commission shall have the same conveyed to the Mayor and City Council of Baltimore, and no ordinance shall be requisite to the validity of such conveyance; said streets, avenues, lanes and alleys so conveyed shall become public highways, subject to all ordinances and resolutions relating to streets, avenues, lanes and alleys in the City of Baltimore; that authority is hereby conferred upon the Mayor and City Council of Baltimore to provide by ordinance or ordinances the proceeding for condemnation of property as herein set forth by the said Commission.

SEC. 6. And be it further enacted, That no expenditure shall be made by said Commission for the grading, paving or improvement of said sidewalks in the annex portion of said city, but the same shall be done at the expense of the owner or owners of the property upon and along the streets, avenues, lanes or alleys on which such sidewalks are to be established, widened, graded, paved or otherwise laid out and improved; and the said Commission in its discretion is authorized and empowered to require said property owners to grade, pave and improve said sidewalks at their expense, or upon their failure to do so the Commission may do such work itself and assess said property for the cost and expenses of such work, and the procedure and rights and powers of the Commission with respect to such work and to such assessments and the collection thereof shall be that now or hereafter prescribed by law in relation to the duties of a similar nature with which the City Engineer and other officers of the city are now or may be respectively clothed, or the procedure and the rights and powers of said Commission may be such as may be provided for the very purpose by any lawful ordinance or ordinances of the Mayor and City Council of Baltimore, which said ordinance or ordinances the Mayor and City Council of Baltimore is hereby fully authorized to adopt, provided provision is made in such ordinance or ordinances for reasonable notice to the owner or owners and for appeals to the Baltimore City Court, and the right of appeal to the Court of Appeals by any person interested, including the Mayor and City Council of Baltimore.

SEC. 7. And be it further enacted, That the Mayor and City Council of Baltimore be and are hereby authorized to issue stock to an amount not exceeding two million five hundred thousand dollars, to be issued from time to time and payable at such time and bearing such rate of interest as the said Mayor and City Council of Baltimore shall by ordinance prescribe; provided, however, that not more than five hundred thousand dollars of said stock shall be issued in any one year. The proceeds of the sale of said stock shall be used only for the purpose of providing the costs and expenses of condemnation, opening, grading, paving and curbing the streets, avenues, lanes and alleys of the annex portion of Baltimore city; said stock shall be sold and issued by the Commissioners of Finance of the City of Baltimore at the best prices obtainable in their judgment therefor, and any premiums derived from the sale thereof shall remain in their hands as part of the sinking funds hereinafter mentioned for the redemption of said stocks at maturity. The residue of the money received from the sale of said stock shall be turned over by them to the Comptroller to be by him deposited with the City Register, and to be placed to the credit of a special fund, to be known as the "Annex Improvement Fund," which shall be exclusively applicable to the purposes in the section above specified, and shall be chargeable with no other items of cost or expense whatever; provided, however, that not more than five hundred thousand dollars ($500,000) of said stock shall be issued for any one year after appropriations for the cost of said work shall have been duly included and allowed for each year in the usual way in the Ordinance of Estimates, then, upon the written requisition of the Commission or its president, the Comptroller shall draw his warrant upon the City Register, payable out of such appropriations from said special fund for the amount of all items of cost or expense properly chargeable upon said special fund; but said stock shall not be issued in whole or in part unless the ordinance of the Mayor and City Council of Baltimore providing for the issuance thereof shall be submitted to the legal voters of the City of Baltimore at such time and place as may be fixed by said ordinance, and be approved by a majority of the votes cast at such time and place as required by Section 7 of Article XI of the Constitution of Maryland. If issued pursuant to such approval, the Mayor and City Council of Baltimore shall levy in each and every year upon all property liable to taxation in the City of Baltimore a sum sufficient to pay the interest accruing on said stock and create a sinking fund sufficient, with the aid of any premiums on the sale thereof, to redeem said stock at its maturity.

SEC. 8. And be it further enacted, That while the work authorized by this Act is being done by said Commission no rights or powers now or hereafter possessed by the Mayor and City Council of Baltimore, or any department, sub-department or official thereof, shall be abrogated, abridged or in anywise altered by the provisions hereof, except in so far as the exercise of the same in the annex portion of the city may be inconsistent with the provisions of this Act; and said Commission is hereby authorized, as its work progresses, to turn over from time to time, in its discretion, such complete portion of said work as it may see fit to the proper city officials, including themselves in their ordinary capacity as Commissioners for Opening Streets, and upon determination of said work to turn over records, writings, maps, surveys, reports and papers, and all property and effects in their possession to themselves in their ordinary capacity as Commissioners for Opening Streets, to be by them preserved, used or disposed of as may be lawful and proper. The Mayor and City Council of Baltimore shall prescribe by ordinance the methods and proceedings for the sewerage and drainage of said Annex, and to provide the costs and expenses of the same out of any fund, or funds, now or hereafter available for that purpose.

SEC. 9. And be it further enacted, That Ordinance No. 151 of the Mayor and City Council of Baltimore, approved June 15, 1906, entitled "An Ordinance granting the Commissioners for Opening Streets further powers and duties in the matter of grading, paving and curbing streets, avenues, lanes and alleys or parts thereof in the annex, in addition to the powers and duties expressly conferred and imposed upon them by the provisions of Chapter 274, of the Acts of the General Assembly of Maryland for the year 1904," and Ordinance 216 of the Mayor and City Council of Baltimore, approved March 6, 1905, is hereby continued with like force and effect as if the same had been ordained after the passage of this Act, and after approval by the people of the loan hereby authorized and the right and powers by said ordinance conferred and the provisions thereof and the procedure therein prescribed may be availed of by the Commission hereby created to the same extent as if said Commission were expressly named in said ordinance, but said ordinance shall be subject to repeal, modification or amendment by the Mayor and City Council of Baltimore as other municipal ordinances.

SEC. 10. And be it further enacted, That any and all moneys collected for benefits pursuant to the exercise of any of the powers hereby granted shall be placed to the credit of the special fund herein provided for, and may be appropriated and expended for the purpose of this Act.

SEC. 11. And be it further enacted, That this Act shall take effect from date of passage, and that all Acts or parts of Acts inconsistent with this Act be and the same are hereby repealed.

Approved April 11, 1910.

CHIEF ENGINEER'S REPORT

BALTIMORE, December 31, 1913.

To the Honorable the Commissioners for Opening Streets.

GENTLEMEN:

I beg to submit to you herewith a report of the grading and paving work done by your Commission during the year 1913.

At the end of 1912 the following streets were under contract, but not paved:

Bentalou street, from North avenue to Presbury street.
Berry street, from Elm to Chestnut avenues.
Calvert street, from North avenue to Twentieth street.
Chester street, from North avenue to Clifton Park.
Fortieth street, from Chestnut to Roland avenues.
Malakoff street, from Washington to Chester streets.
Mason alley, from Ducatel to Whitelock streets.
Newington avenue, from Park to Mount Royal avenues.
Oak street, from Twenty-sixth to Twenty-seventh streets.
Twentieth street, from Kennedy avenue to Aisquith street.
Twenty-sixth street, from Calvert street to Guilford avenue.
Twenty-seventh street, from Calvert street to Guilford avenue.
Twenty-eighth street, from Huntingdon to Hampden avenues.
Twenty-ninth street, from Huntingdon to Hampden avenues.
Thirty-fourth street, from Chestnut to Elm avenues.

All of these streets have been completed and accepted.

Concerning the contracts that have been let during 1913, I beg to report the following:

Contract No. 106, which included the paving of Westwood avenue with bituminous concrete, from Poplar Grove street to Hilton street, was awarded to P. Flanigan & Sons. Work was started June 16, 1913. There is a fill of some 14,000 yards in Westwood avenue, between Poplar Grove street and Longwood street. After our fill was completed we had to postpone the actual paving until the Sewerage Commission completed its storm-water drain, which was planned to run in the bed of Westwood avenue, between Poplar Grove and Longwood streets. This drain is nearly completed now, and we will be able to proceed with our paving at the opening of spring weather. The paving of the avenue, from Longwood street to Hilton street, has been completed and accepted.

Contract No. 107 was awarded to P. Flanigan & Sons, April 23, and work was started May 17. It included the paving of Oak street with bituminous concrete, from University Parkway to Mallory lane. The work was completed August 30, and has been accepted.

Contract No. 108, which included the paving of Smallwood street, from Walbrook avenue to Clifton avenue, and Clifton avenue, from Smallwood street to the first alley east of McKean avenue, with vitrified brick, was awarded to the Penn-Mar Construction Company, April 23. The Penn-Mar Construction Company subsequently sub-let the contract to the Baltimore Asphalt Block and Tile Company. Owing to the remarkable scarcity of good vitrified block, the Baltimore Asphalt Block and Tile Company was forced to let the paving season go by without making very much of a start on this contract. To date, about half the grading has been done, and about half the curb has been constructed. About two-thirds of the brick necessary for the completion of the contract are on the ground, and several cars of brick are arriving daily, so that as soon as the spring weather permits, this contract can be finished in a short time.

Contract No. 109 included the paving of Monroe street, from North to Clifton avenues. The bids were opened April 16, but the contract was never awarded, as your Commission decided it would be inadvisable to pave this street at that time.

Contract No. 110 included the paving of Augusta avenue, from Frederick road to Old Frederick road, with bituminous concrete, a distance of about 1,600 feet. Although this contract was awarded to the Eastern Paving Company on April 23, work was not begun until September 2, because the Sewerage Commission was unable to complete its drainage system in Augusta avenue until after September 2. The work was pushed energetically and was finished November 18, and has been accepted.

Contract No. 111 included the paving of Fayette street, from Catherine street to Shipley street; Fairmount avenue, from Catherine street to Shipley street; Catherine street, from Baltimore street to Fayette street, and Shipley street, from Baltimore street to Fayette street, with bituminous concrete. The contract was awarded to the Penn-Mar Construction Company on April 23, and was subsequently sub-let to the Baltimore Asphalt Block and Tile Company. The part of the city in which these streets are located was not in the area that the Sewerage Commission planned to sewer and drain when their 1906 estimate was made, so that the Sewerage Commission was unable to take care of the much needed drainage system in Catherine street. At our request and at our expense the Sewerage Commission constructed a drainage system in Catherine street, the storm-water flow from Fayette street, Fairmount avenue and Catherine street being conducted to Peck's Branch. The contract was finished November 26 and was accepted.

Contract No. 112 included the paving of Hilton street with sheet asphalt, from Morris avenue to Windsor avenue, and was awarded to the J. H. Cranford Construction Company, May 21, 1913. The contract was subsequently sub-let to the Baltimore Asphalt Block and Tile Company, which Company began work July 31 and completed the contract November 6 in a very satisfactory manner. The street has been accepted.

It became evident that a drainage system to take care of the drainage at the corners of Hilton street and Walbrook avenue, and at Hilton street and Windsor Mill road, was necessary. This system, which carries the storm-water flow from Hilton street to an existing drain some 300 feet west of Hilton street, was constructed by the City Engineer at our expense.

Contract No. 113 included the paving of Forest Park avenue, from Garrison avenue to the western city line, and Kathland avenue, from Oakfield avenue to the western city line, with bituminous concrete. The contract was awarded to the J. H. Cranford Construction Company, and was subsequently sub-let to the Baltimore Asphalt Block and Tile Company. The work was started September 24, was finished November 27 and has been accepted by the city. Concerning this contract, I might say that we encountered a rather embarrassing drainage proposition. A drain which took care of the storm-water flow at several points on Garrison avenue was uncovered on Forest Park avenue about 300 feet west of Garrison avenue, the outlet to the drain being under the driveway into the Kelso Home. Our grade was such that we were unable to carry this drainage in the direction in which it originally ran. We appealed to the Sewerage Commission to help us out of our difficulty by building a drain from Garrison avenue through the alley north of Springdale avenue to a large drain which they were constructing in Callaway avenue. Although their general plan showed the drainage of Garrison avenue to be taken care of by a drain running in another direction, which drain it was impossible to build at the present time, they agreed to construct the drain as requested by us, provided we would pay the difference between the cost of the drain, which we requested, and the estimated cost of the one they proposed to build at some future time. The Sewerage Commission added this drain for us as an extension to one of their contracts, and it was completed promptly and satisfactorily at a cost to us of only $143.

Contract No. 114, which included the paving, with bituminous concrete, of Cleveland avenue, from Garrison avenue to Liberty Heights avenue, and Callaway avenue, from Garrison avenue to Liberty Heights avenue, was awarded to the J. H. Cranford Construction Company, and was subsequently sub-let to the Baltimore Asphalt Block and Tile Company. Cleveland avenue was completed on October 20, but the paving of Callaway avenue had to be postponed until the spring of 1914, on account of the work which the Sewerage Commission did in Callaway avenue, and which has just been completed. The paving of Cleveland avenue has been accepted by the city.

Contract No. 115, which included the paving of Bernard street, from Twenty-sixth to Thirtieth streets with bituminous concrete, was awarded to P. Flanigan & Sons, June 11, and was completed in a satisfactory manner, August 30. It has been accepted by the city.

Contract No. 116 included the paving of Dukeland street, from North avenue to Windsor avenue, with sheet asphalt, and was awarded to the J. H. Cranford Construction Company, and was subsequently sub-let to the Baltimore Asphalt Block and Tile Company. Up until the time the Baltimore Asphalt Block and Tile Company started the grading of Dukeland street (formerly Sixth street), November 22, the street appeared on the map only. The paving of Dukeland street will open an entirely new highway, which will conform in its location to the general plan as laid out by the Topographical Survey Commission. On December 31, all of the grading between North avenue and Clifton avenue, and about half of the grading between Clifton avenue and Windsor avenue, had been completed and a large part of the necessary curb had been constructed. Our contractor has stopped work for the winter on this street, and it is in the hands of the various city departments and public service corporations for the installation of their necessary underground structures. The actual paving will be completed in the spring.

Contract No. 117 included the paving, with bituminous concrete, of Orem avenue, Edgemont avenue and Avalon avenue, all between Parkwood avenue and Evergreen Terrace. Bids on this contract were opened May 14, but the contract was not awarded, as your Commission decided that it would be inadvisable to pave these streets at that time.

Contract No. 118 calls for the grading and paving of Hilton street, between Edmondson avenue and Frederick road, the paving to be of sheet asphalt. This is probably one of the most important contracts that has been let by your Commission for several years, as the opening of Hilton street will furnish a connection between two much travelled east and west highways, which has for a long time been sadly needed. The contract for this street was awarded June 4 to Frech & Allen, and they started their work of grading June 30. At the end of the year the rough grading, amounting to 60,000 yards, was completed and the street is now in the hands of the various city departments and public service corporations for the installation of their underground structures. We anticipate that the paving of this street will be finished by the first of July, and there seems little doubt that building operations will be started along Hilton street even before the completion of the paving. Hilton street, in this part of the city, is an entirely new street, as the majority of it was used as cornfields before it was acquired by your Commission and graded.

Contract No. 119, which calls for the paving of Twenty-seventh street, between Huntingdon avenue and Sisson street, with vitrified block, was awarded to Thomas Mullan, June 11, and he began his work of grading July 2, completing the job September 27. Already Twenty-seventh street has been subjected to a great deal of heavy traffic.

Contract No. 120, which included the paving, with bituminous concrete, of Cedar avenue, from Thirty-third street to Carwell avenue; Carwell avenue, from Chestnut to Cedar avenues; Thirty-sixth street, from Chestnut to Cedar avenues; Thirty-fourth street, from Cedar to Dulin avenues, and Dulin avenue, from Thirty-third street to Thirty-fourth street, was awarded, June 18, to the Baltimore Asphalt Block and Tile Company. A careful inspection of the locality of these streets showed the necessity of installing a rather extensive drainage system. After being advised that the Sewerage Commission would be unable to do anything in the way of providing storm-water drainage in this neighborhood at any time in the near future, we took up the matter with the City Engineer, and he has recently completed for us the necessary drainage system at our expense. The paving of these streets will be pushed as rapidly as possible as soon as spring weather opens up.

Contract No. 121, which called for the paving of Guilford avenue, from Twenty-seventh to Thirty-first streets; Twenty-eighth street, from Calvert street to Guilford avenue, and Thirtieth street, from Calvert street to Guilford avenue, was awarded June 25 to the Baltimore Asphalt Block and Tile Company. The work was finished October 29, and has been accepted by the city. It is very gratifying to note that as soon as the paving of Guilford avenue was finished extensive building operations were started between Twenty-seventh and Thirty-first streets.

Contract No. 122, which is the largest contract let by your Commission during the last five years, was awarded to the American Paving and Contracting Company on October 2. The work specified by this contract includes the grading and paving of Thirty-third street, between St. Paul street and Hillen road, a distance of 7,600 feet, practically all of which is through virgin territory. The grading in this contract, which amounts to about 100,000 yards, has been well started, two steam shovels being now at work. It is our intention to complete the grading of Thirty-third street by the end of March, to turn the street over to the various city departments and public service corporations for the installation of their necessary underground structures, and to complete our paving by the first of October. The question of drainage again caused us some embarrassment when this contract was considered, as it was necessary to install a large storm-water drain to run in the alley east of St. Paul street, across our right-of-way. The Sewerage Commission had no funds with which to construct this drain, but they agreed to place the construction of it in one of their contracts, the work to be done at our expense, their estimate of the cost being approximately $10,000. This drain has been completed and we are now in a position to proceed with our twenty-foot fill at this point.

Contract No. 123 included the grading and paving, with bituminous concrete, of Forest Park avenue, from Callaway avenue to Grantley street; Springdale avenue, from Callaway avenue to Grantley street; Fairview avenue, from Garrison avenue to Grantley street, and Grantley street, from Fairview avenue to Forest Park avenue, and was awarded to the Baltimore Asphalt Block and Tile Company June 16. Shortly after our contract was awarded the Sewerage Commission awarded a contract that will provide drainage for this section of Forest Park. Their work has been rushed as much as possible, and we have been able to complete the paving of Springdale avenue, from Callaway avenue to Grantley street; of Fairview avenue, from Garrison avenue to Grantley street, and of Grantley street, from Fairview to Springdale avenues.

Contract No. 124, which included the paving, with bituminous concrete, of Arunah avenue, from Bentalou street to Warwick avenue; Warwick avenue, from Edmondson avenue to Arunah avenue; Wheeler avenue, from Edmondson avenue to Arunah avenue, and Thomas and Warwick avenues, from North avenue to Baker street, was awarded to the Baltimore Asphalt Block and Tile Company, August 27. All of the work in this contract was completed by the 31st of December, except one block of Warwick avenue, between Westwood avenue and North avenue. This block was completed January 2, 1914.

Contract No. 125 included the paving, with bituminous concrete, of Hickory avenue, between Thirty-sixth and Thirty-eighth streets, and Thirty-eighth street, between Hickory and Elm avenues, and was awarded to the Warner-Quinlan Asphalt Company July 23. Our rough grading of these streets caused the uncovering of gas and water mains, together with their house services, and we were considerably delayed while waiting for the Water Department and the Gas Company to lower their mains and services, an operation which is exceedingly slow, tedious and costly. Also we were compelled to again call on the City Engineer to install a drainage system in Thirty-eighth street at our expense. However, the contract was very satisfactorily completed on November 15, and was accepted by the city.

Contract No. 126, which included the paving, with sheet asphalt, of Ellamont street, Rosedale street and Braddish avenue, from North avenue to Baker street; of Whitmore avenue, from North avenue to Westwood avenue; Smallwood street, from Westwood avenue to Presbury street; Presbury street and Westwood avenue, from Smallwood street to Warwick avenue, and of Presbury street, from Ellamont street to Windsor Mill road, was awarded to the American Paving and Contracting Company, September 10. This contract has been pushed forward rapidly, and on December 31 was about 85 per cent. finished. We expect to complete the entire contract by the end of January.

Contract No. 127, which calls for the paving, with sheet asphalt, of Windsor avenue, from Dukeland street to Ellamont street, and of Poplar Grove street, Longwood street and Rosedale street, from Clifton avenue to Windsor avenue, and of

Clifton avenue, from Hilton to Denison streets, was awarded to the American Paving and Contracting Company, September 24. The grading of Windsor avenue requires fills amounting to about 18,000 yards, practically all of which is borrow. At the end of 1913 about half of this filling was completed. The actual paving of the streets in this contract will be postponed until the spring.

Contract No. 128 required the grading and paving, with sheet asphalt, of Greenway street, between Charles and St. Paul streets. It was awarded to the American Paving and Contracting Company, October 22, and the work was completed and accepted December 20.

I wish to call your attention to the fact that paving in the Annex is accompanied by difficulties that would not be imagined by the ordinary citizen, unless he gave the matter particular attention. At times the slow progress of our work is discouraging, both to the contractor and to your engineering force. The cause of this slow progress is unavoidable. Probably our greatest source of trouble is the uncovering of water and gas mains, together with their house connections. Most of the streets in the Annex have been graded at random by private parties, and the establishing of even a fairly good grade requires a considerable amount of grading. In most of our streets this grading uncovers these mains which have to be lowered, together with their house services, without interfering with the continuous supply of gas or water to the various houses. This process of lowering pipes is necessarily very slow and tedious, and although we have been seriously delayed on account of the necessity of lowering the pipes, I wish to say that the Gas Company and the Water Department have co-operated with us in a manner that is exceedingly satisfactory. Another source of delay is the uncovering of shallow private sewers, a great many of which we have encountered. In some instances it is highly impracticable to relay these sewers, as they are on flat grades, and their outfalls are so far from the scene of our operations that it would cost exceedingly large sums of money to relay them. In such instances it has been necessary to rearrange our grades at times, placing reinforcing material over the sewers and constructing our profiles so as to clear them without interfering with their continuous operation.

Baltimore city has probably been the busiest city in the United States, as regards construction work, during the past year, and all of the city departments and public service corporations have been taxed to the limit trying to arrange their work so as to interfere as little as possible with the operations of the other departments, and I believe that, taking this into consideration, the amount of work that has been carried through this year by your Commission should be considered exceedingly satisfactory.

During the year 1913 your Commission constructed 130,194 square yards of improved pavement, which amounts to 7.4 miles of street thirty feet wide. The grading done amounts to 152,000 cubic yards. In addition to this, there has been installed 8,000 lineal feet of armored concrete curb, and 10,300 square yards of concrete base, which will apply to the paving that will be finished in the spring. The quantity of work done by your Commission during 1913, as shown by these figures, breaks the record of any previous year, and I believe the quality of the work will compare as favorably with previous operations as does the quantity.

Taking into consideration the fact that we were unable to start a number of our contracts until late in the summer, owing to legal questions, decisions on which had to be awaited; also taking into consideration the fact that it was practically impossible to secure satisfactory vitrified blocks during the latter part of the summer, I believe that your Board should feel gratified at the amount of work that has been completed.

The various city departments and public service corporations have co-operated with us in a gratifying manner, and I hope they will be assured that their co-operation has been appreciated. Our engineering and inspecting forces have performed their duties with loyalty and energy.

I beg to attach hereto the following tables:

Table No. 1 shows the contracts that were let during 1912 and completed during 1913, together with all of the contracts that were let during 1913. Under these contracts is shown the amount of the various kinds of work that has been completed during 1913, together with the status of the work at the end of 1913.

Table No. 2 gives a statement of the contracts that were not finished during 1912, and which were finished during 1913, together with all the contracts let during 1913. In this table is shown the date of each contract, the contractor receiving the contract, the limits of the various streets, the status of the work on each street on December 31, 1913, and the date of the expiration of the guaranty on those streets, which have been finished.

In Table No. 3 are grouped the various streets that were paved during 1913 with bituminous concrete, sheet asphalt and vitrified brick. It also shows the yardage and mileage of the streets of these various classes of paving, together with the kind of asphalt and vitrified block used.

Table No. 4 gives a list of contracts that were let during 1913, and that were not completed December 31, 1913.

It should be borne in mind when considering this table, that the majority of the work shown on this table was not intended to be finished during 1913, the streets being two-year jobs, on account of the large amount of grading, and the large amount of city department work to be installed after grading is completed.

Table No. 5 is a tabulation in detail of the grading and paving work that has been done by your Commission since May 3, 1906.

There are also attached two charts, one showing graphically the amount of paving of the various classes completed during 1913, and the other showing the amount of the various classes completed since May 3, 1906.

Respectfully yours,

F. W. McKinney, *Chief Engineer.*

Summary of Expenses of This Department.

Original Appropriation, salaries		$9,900 00
Expenditures to December 15, 1913	$9,860 00	
Balance	40 00	
		9,900 00

Original Appropriation, expenses		$500 00

Expenditures to December 31, 1913.

105	November 14, 1912	Elder Paving and Contracting Company	Twenty-eighth street	W. B. L. Huntingdon avenue	E. B. L. Hampden avenue	Completed January 1, 1913	February 26, 1918.	
105	November 14, 1912	Elder Paving and Contracting Company	Twenty-seventh street	E. B. L. Calvert street	W. B. L. Guilford avenue	Completed May 9, 1913	August 12, 1918	
105	November 14, 1912	Elder Paving and Contracting Company	Twenty-sixth street	E. B. L. Calvert street	W. B. L. Guilford avenue	Completed May 9, 1913	August 12, 1918	
105	November 14, 1912.	Elder Paving and Contracting Company	Hampden avenue	S. B. L. Twenty-seventh street	S. B. L. Twenty-ninth street	Completed January 2, 1913	February 26, 1918.	
105	November 14, 1912	Elder Paving and Contracting Company	Oak street	N. B. L. Twenty-sixth street	N. B. L. Twenty-seventh street	Completed May 1, 1913	August 12 1918	
105	November 14, 1912	Elder Paving and Contracting Company	Chester street	N. B. L. North avenue	Clifton Park	Completed July 3, 1913	August 12 1918	
105	November 14, 1912	Elder Paving and Contracting Company	Malakoff street	E. B. L. Washington street	W. B. L. Chester street	Completed July 3, 1913	August 12 1918	
106	June 2, 1913	P. Flanigan & Sons	Westwood avenue	W. B. L. Poplar Grove street	E. B. L. Hilton street	90 per cent. completed.	November 17, 1918.	Under guaranty from Longwood street to Hilton street only. First 1913 contract.
107	April 29, 1913	P. Flanigan & Sons	Oak street	N. C. L. University Parkway	S. B. L. Mallory lane	Completed August 30, 1913	September 27, 1918	
108	June 5 1913	Pen-Mar Contracting Company	Smallwood street	N. B. L. Walbrook avenue	N. B. L. Clifton avenue	Not started		
108	June 5 1913	Pen-Mar Contracting Company	Clifton avenue	E. B. L. Smallwood street	W. B. L. first alley east of McKean	10 per cent. completed		
110	May 30 1913	Eastern Paving Company	Augusta avenue	N. B. L. Frederick road	S. C. L. Old Frederick road	Completed November 18, 1913	December 19, 1918	
111	June 5, 1913	Pen-Mar Contracting Company	Fayette street	W. B. L. Catherine street	W. B. L. Shipley street	Completed July 30, 1913	December 19, 1918	
111	June 5, 1913	Pen-Mar Contracting Company	Fairmount avenue	W. B. L. Catherine street	E. B. L. Shipley street	Completed July 31, 1913	December 19, 1918.	
111	June 5, 1913	Pen-Mar Contracting Company	Catherine street	N. B. L. Baltimore street	N. B. L. Fayette street	Completed November 26, 1913	December 19, 1918	
111	June 5, 1913	Pen-Mar Contracting Company	Shipley street	N. B. L. Baltimore street	S. B. L. Fayette street	Completed August 8, 1913	December 19, 1918.	
112	June 19, 1913	J. H. Cranford Construction Company	Hilton street	S. B. L. Morris avenue	N. B. L. Windsor avenue	Completed November 6, 1913	November 18, 1918	
113	June 19, 1913	J. H. Cranford Construction Company	Forest Park avenue	W. B. L. Garrison avenue	Western city line	Completed December 3, 1913	December 11, 1918.	
113	June 19 1913	J. H. Cranford Construction Company	Kathland avenue	N. B. L. Oakfield avenue	Western city line	Completed November 27, 1913	December 11, 1918.	
114	June 19 1913	J. H. Cranford Construction Company	Cleveland avenue	N. B. L. Garrison avenue	S. B. L. Liberty Heights avenue	Completed October 20, 1913	October 20, 1918.	
114	June 19, 1913	J. H. Cranford Construction Company	Callaway avenue	N. B. L. Garrison avenue	S. B. L. Liberty Heights avenue	Not started		
115	June 13, 1913	P. Flanigan & Sons	Bernard street	N. B. L. Twenty-sixth street	S. B. L. Thirtieth street	Completed August 30, 1913	September 25, 1918	
116	June 19, 1913	J. H. Cranford Construction Company	Dukeland street	N. C. L. North avenue	N. B. L. Windsor avenue	30 per cent. completed		
118	June 4 1913	Freck & Allen	Hilton street	S. C. L. Edmondson avenue	N. B. L. Frederick road	50 per cent. completed		
119	June 20, 1913	Thomas Mullan	Twenty-seventh street	W. B. L. Huntingdon avenue	E. B. L. Sisson street	Completed September 27, 1913	October 26, 1918	
120	June 21 1913	Baltimore Asphalt Block and Tile Company.	Cedar avenue	N. B. L. Thirty-third street	N. B. L. Carwell avenue	Not started		
120	June 21, 1913	Baltimore Asphalt Block and Tile Company.	Carwell avenue	E. B. L. Chestnut avenue	W. B. L. Cedar avenue	Not started		
120	June 21, 1913	Baltimore Asphalt Block and Tile Company	Thirty-sixth street	E. B. L. Chestnut avenue	W. B. L. Cedar avenue	Not started		
120	June 21 1913	Baltimore Asphalt Block and Tile Company	Thirty-fourth street	E. B. L. Cedar avenue	W. B. L. Dulin avenue	Not started		
120	June 21 1913.	Baltimore Asphalt Block and Tile Company.	Dulin street	N. B. L. Thirty-third street	N. B. L. Thirty-fourth street	Not started		
121	July 14, 1913	Baltimore Asphalt Block and Tile Company.	Guilford avenue	N. B. L. Twenty-seventh street	S. B. L. Thirty-first street	Completed October 31, 1913	November 1, 1918	
121	July 14 1913	Baltimore Asphalt Block and Tile Company.	Twenty-eighth street	E. B. L. Calvert street	W. B. L. Guilford avenue	Completed October 28 1913	November 1, 1918	
121	July 14 1913	Baltimore Asphalt Block and Tile Company.	Thirtieth street	E. B. L. Calvert street	W. B. L. Guilford avenue	Completed October 29, 1913	November 1, 1918	
122	October 27 1913	American Paving Company	Thirty-third street	E. C. L. St. Paul street	W. C. L. Hillen road	10 per cent. completed		
123	July 22 1913	Baltimore Asphalt Block and Tile Company.	Forest Park avenue	E. B. L. Callaway avenue	W. B. L. Grantley street	10 per cent completed.		
123	July 22 1913	Baltimore Asphalt Block and Tile Company	Springdale avenue	E. B. L. Callaway avenue	W. B. L. Grantley street	Completed September 30, 1913	December 11, 1913.	
123	July 22 1913	Baltimore Asphalt Block and Tile Company	Fairview avenue	E. B. L. Garrison avenue	W. B. L. Grantley street	Completed October 17, 1913	December 11, 1918.	
123	July 22, 1913	Baltimore Asphalt Block and Tile Company	Grantley street	N. B. L. Fairview avenue	S. B. L. Forest Park avenue	Completed December 11, 1913	December 11, 1918.	
124	September 3, 1913	Baltimore Asphalt Block and Tile Company	Thomas avenue	S. B. L. North avenue	N. B. L. Baker street	Completed December 30, 1913		
124	September 3, 1913	Baltimore Asphalt Block and Tile Company	Warwick avenue	S. B. L. North avenue	N. B. L. Baker street	99 per cent. completed		Under guaranty from North avenue to Westwood avenue only.
124	September 3 1913	Baltimore Asphalt Block and Tile Company	Arunah avenue	W. B. L. Bentalou street	W. B. L. Warwick avenue	Completed November 25, 1913		
124	September 3, 1913	Baltimore Asphalt Block and Tile Company	Warwick avenue	N. B. L. Edmondson avenue	S. B. L. Arunah avenue	Completed November 25, 1913		
124	September 3 1913	Baltimore Asphalt Block and Tile Company	Wheeler avenue	N. B. L. Edmondson avenue	S. B. L. Arunah avenue	Completed November 24, 1913		
125	July 30, 1913	Warner-Quinlan Company.	Hickory avenue	N. B. L. Thirty-sixth street	N. B. L. Thirty-eighth street	Completed November 13, 1913.	December 11, 1918.	
125	July 30 1913	Warner-Quinlan Company	Thirty-eighth street	E. B. L. Hickory avenue	W. B. L. Elm avenue	Completed November 15, 1913	December 11, 1918.	
126	September 18, 1913.	American Paving Company.	Ellamont street	S. B. L. North avenue	N. B. L. Baker street	85 per cent. completed		
126	September 18, 1913	American Paving Company.	Rosedale street	S. B. L. North avenue	N. B. L. Baker street	90 per cent completed		Under guaranty from Baker street to Presbury street and from Westwood avenue to North avenue.
126	September 18, 1913	American Paving Company.	Braddish avenue	S. B. L. North avenue	N. B. L. Baker street	70 per cent. completed		
126	September 18, 1913	American Paving Company.	Whitmore avenue	S. B. L. North avenue	N. B. L. Westwood avenue	Completed December 29, 1913		
126	September 18, 1913	American Paving Company	Smallwood street	S. B. L. Westwood avenue	S. B. L. Presbury street	Completed November 20, 1913.		
126	September 18 1913	American Paving Company	Presbury street	E. B. L. Ellamont street	W. B. L. Windsor Mill road	90 per cent. completed		
126	September 18 1913	American Paving Company	Presbury street	W. B. L. Smallwood street	E. B. L. Warwick avenue	Completed December 10, 1913.		
126	September 18 1913	American Paving Company	Westwood avenue	W. B. L. Smallwood street	E. B. L. Warwick avenue	Completed December 10, 1913		
127	September 29, 1913	American Paving Company	Windsor avenue	W. B. L. Dukeland street	E. B. L. Ellamont street	30 per cent. completed		
127	September 29 1913	American Paving Company	Poplar Grove street	N. B. L. Clifton avenue	S. B. L. Windsor avenue	Not started		
127	September 29 1913	American Paving Company	Longwood street	N. B. L. Clifton avenue	S. B. L. Windsor avenue	Not started

ANNUAL REPORT

OF THE

Collector of Water Rents and Licenses

1797

To the Mayor and City Council of Baltimore
for the Fiscal Year Ended December 31

1913

BALTIMORE
MEYER & THALHEIMER
CITY PRINTER

1914

REPORT

DEPARTMENT OF FINANCE,
SUB-DEPARTMENT
COLLECTOR OF WATER RENTS AND LICENSES,
CITY HALL,
BALTIMORE, January 1, 1914.

To the Honorable, the Mayor and City Council of Baltimore.

GENTLEMEN:

I respectfully submit my Annual Report showing the collections for water rents and licenses for 1913 by the following statements for your consideration:

The receipts for water rents, meter rates, plumbing bills, etc., for the year ending December 31, 1913, amount to	$1,483,508 83	
Less amount returned for payments in error	3,958 43	
		$1,479,550 40
While for the year 1912 they were		1,442,740 71
Showing an increase for the year 1913 of		$36,809 69

The amount of money refunded during the year 1913 exceeded that of 1912 by $2,179.84. Of this amount, $1,435.20 was a refund by direction of the Water Board due to an error of that department in the reading of a meter.

There was an increase in the receipts from meter accounts of $57,490.27 and on plumbing bills of $23,741.94. The collection from flat rates amounted to $39,782.80 less than last year. The increase in the meter receipts and the decrease in the flat rate accounts is partly explained by the transfer of a number of the latter accounts to the former. The increase in our collections over the Department's estimate made it unnecessary to force the collection of the flat rate accounts.

In addition to the collections ($1,479,550.40) made by the Department on account of water rents, etc., the Water Engineer turned into the City Comptroller $9,494.25 for sales of old material, etc., making the total net collections $1,489,044.65, and showing a surplus of receipts over disbursements of $382,787.60.

The amount expended by the office of Collector of Water Rents and Licenses, including $415,000 interest paid on water loans, was $468,485.53, and the amount expended by the Water Engineer's Department was $637,771.52, making a total of $1,106,257.05.

In Statement "D" the abatements made during the year 1913 amount to $12,096.81 as against $14,524.43 in 1912. These abatements are largely attributable to owners of vacant property declaring vacancy thereon by availing themselves of the payment of the fee of $1 for turning the water off and on; also by action of the Water Board in the reduction of rents and by change from flat to meter rate. The latter two, it is apparent, will be materially reduced hereafter through the action taken by the Board of Estimates in directing that water revenue estimated for the Department should not be diminished during the current year.

Statement "E" shows 3,256 new supplies put in, 1,022 of which replaced joint supplies. In 1912, 2,982 were new supplies and 680 replaced joint supplies.

As explained in our 1912 report, most of these supplies were put in new property, upon which, however, the charge for water does not actually begin until the property is occupied.

In Statement "F" the item of plumbing bills remaining on the ledgers December 31, 1913, is $19,290.44, an increase of $2,861.90. About $4,000 of this amount is for work done during the month of December; the larger portion is due by city contractors engaged in the construction of sewers, etc. The amounts due by them are from time to time furnished the Sewerage Commission and the Comptroller's office, for the purpose of protecting the city, and the withholding of the amount from their estimates.

Whilst there were added 906 new accounts to the Department during the year, many more supplies were put in, but the Department will not derive revenue therefrom until the property is actually occupied. Our inspectors watch these closely.

Our revenue sheet for 1914 shows 1,166 bars specifically charged under the flat rate on our books. The records of the Court of Common Pleas shows 1,247 licenses actually issued to saloons. The explanation of this seeming discrepancy is that the balance are on meters.

The collections for general licenses, consisting of wagons and other vehicles, telegraph and telephone poles, theatres, moving pictures, entertainments, billiard, pool and bagatelle tables, bowling alleys, venders, etc., amounted in 1913 to $98,540.78, and in 1912 $91,184.71, *an increase* in 1913 of $7,356.07.

The ordinance approved December 10, 1912, making the annual license fee for venders of perishable goods from wagons $5 per annum, and from baskets $2 per annum, produced the sum of $8,632.25, as against $5,279.35 collected in six months of the year 1912 at the old charge of $25 and $15 per annum, respectively.

Under the provisions of the ordinance above referred to this Department *returned* the sum of $3,161.70 *during* the year 1913 on venders' licenses issued in 1912.

The collection for dog licenses in 1913 amounted to $22,833.71, as against $23,272.25 for 1912, showing a decrease of $438.54.

The establishment of moving-picture parlors has added quite a large amount to the receipts for entertainments.

There are now about 100 of these places in the city, and the number is ever on the increase. I might mention that with a view to public safety no license is issued to any place of amusement without a certificate of approval first being obtained from the office of the Inspector of Buildings.

Whilst the amount of revenue received from the exhibition of wild west shows and circuses was not large, it makes a change in our receipts annually to the extent of about $600, as they now seem to seek locations on vacant lots beyond the city limits.

The receipts from the tax of $2 per annum on all telegraph and telephone poles throughout the city amounted to $17,474, as against $18,002 in 1912. This decrease of $528, representing 264 less poles, would indicate that the extension of the conduit system is being availed of by those corporations, and it is to be expected that our receipts from this source will be diminished yearly.

I desire to call attention to the fact at this time that we are handicapped by reason of an insufficient number of ledger clerks, often finding it necessary so call upon our inspectors (whose duties require them to be on the street) to act in that capacity, and to wait upon the public to avoid unnecessary delay.

I regret to record the death of two of our ledger clerks during the year, viz.: Mr. Fred W. Lustnauer, who died last February, and Mr. James E. Burke, who died last August, both of whom were in the Department for a number of years and were faithful in the performance of their duties.

I desire to commend the diligence and efficiency of the employees of this Department and to say that they discharge their duties promptly and satisfactorily.

The accompanying tabulated statements set forth in detail the work accomplished.

A.—Collection of water rents	$1,483,508 83
B.—Expenditures	468,485 53
C.—Monthly receipts of water rents	1,483,508 83
D.—Abatements	12,096 81
E.—New supplies	32,662 00
F.—Balances remaining on ledgers December 31, 1913	189,317 41
G.—Revenue shown by ledgers January 1, 1914	1,509,872 25
H.—Receipts for licenses	121,374 49

All of which is respectfully submitted.

DANIEL J. LODEN,
Collector of Water Rents and Licenses.

STATEMENT A.

Collections Made for Water Department During the Year 1913.

	Dr.	Cr.
To water rents for 1913	$724,932 88

Report of the Chief Engineer

TO THE

Electrical Commission

OF BALTIMORE

1797

FOR THE YEAR 1913

BALTIMORE
MEYER & THALHEIMER
CITY PRINTER

1914

REPORT

OF THE

CHIEF ENGINEER

TO THE

Electrical Commission of Baltimore.

BALTIMORE, January 1, 1914.

To the Honorable, the Chairman
and Members of the Electrical Commission.

GENTLEMEN:

I have the honor to submit the following report pertaining to the operations of this office during the year 1913:

CONDUIT LINES CONSTRUCTED.

During 1913 a greater amount of conduit was laid than in any other year since the work of constructing the municipal subway system was begun. Not only was the construction prosecuted on a larger scale, but the territory covered during that period was of a greater area, the activities of the department having extended to all sections of the city.

Considerably more than a million and a half duct feet of conduit were installed during the year, bringing the total amount now included in the system to 12,143,460.40 duct feet. This is exclusive of what is termed "special" construction, or, in other words, conduit laid in replacing lines and work of a special nature for which the department is reimbursed and which does not increase the capacity of the system for general cable occupancy. Under this special account 31,173.70 duct feet were installed during the year, which, added to previous construction, makes a grand total under this class of work of 425,574.53 duct feet.

Below is given a list of the principal lines constructed during the year.

Trunk Conduit.

Reisterstown road, from Liberty road to Wahotan avenue.
Reisterstown road, from Clifton avenue to Bryant avenue.
Fulton avenue, from North avenue to Druid Hill avenue.
Whitelock street, from Woodbrook avenue to east of Callow avenue.
Reservoir street, from west of Callow avenue to west of Mt. Royal avenue.
Francis street, from Fulton avenue to Retreat street.
Madison avenue, from north of Brooks lane to North avenue.
Linden avenue, from Whitelock street to North avenue.
Callow avenue, from Whitelock street to North avenue.
Railroad avenue, from Woodberry avenue to Union avenue.
Twenty-fifth street, from Hudson alley to Greenmount avenue.
Twenty-third street, from Mace street to Guilford avenue.
Twenty-first street, from Mace street to Guilford avenue.
St. Paul street, from North avenue to Thirty-first street.
Calvert street, from North avenue to Twentieth street.
Greenmount avenue, from North avenue to Gorsuch avenue.
Greenmount avenue, from north of Whitridge avenue to Twenty-eighth street.
Thirty-ninth street, from University Parkway to Oak street.
Twenty-seventh street, from Huntingdon avenue to Atkinson street.
Twenty-eighth street, from Guilford avenue to Hunter alley.
Thirtieth street, from Guilford avenue to Hunter alley.
Preston street, from Guilford avenue to Greenmount avenue.
West street, from Ridgely street to Peach alley.
Andre street, from Cuba street to Fort avenue.
Dolphin street, from Jordan alley to Morris street.
Dolphin street, from Park avenue to Rutter street.
Fayette street, from Caroline street to Wolfe street.
Federal street, from Calvert street to Greenmount avenue.
Fort avenue, from Charles street to Fort McHenry.
Frederick avenue, from Payson street to Gwynn's Falls.

Frederick avenue, from Gwynn's Falls to Tyson street.
Frederick avenue, from Van Bibber avenue to Caton avenue.
Frederick avenue, from Dorsey lane to Loudon avenue.
Fremont avenue, from Mosher street to Pennsylvania avenue.
Granby street, from Exeter street to Central avenue.
Baltimore street, from Wolfe street to Patterson Park avenue.
Baltimore street, from Patterson Park avenue to East avenue.
Patterson Park avenue, from Pratt street to Baltimore street.
Greenmount avenue, from North avenue to Preston street.
Howard street, from West street to Stockholm street.
Key Highway, from York street to Covington street.
Lafayette avenue, from Calvert street to Hargrove alley.
Berkeley street, from Howard street to Chase street.

SERVICE AND DISTRIBUTION CONDUIT.

Fremont avenue, from Baltimore street to Harlem avenue.
Granby street, from Exeter street to Central avenue.
High street, from Baltimore street to Eastern avenue.
Holliday street, from Saratoga street to Lexington street.
Light street, from Hill street to Lee street.
Park avenue, from Preston street to Hoffman street.
President street, from Stiles street to Fawn street.
Preston street, from Brevard street to Park avenue.
St. Paul street, from Pleasant street to Centre street.
Stiles street, from President street to East Falls avenue.
Stiles street, from Exeter street to High street.
Watson street, from Central avenue to High street.
Biddle street, from Park avenue to Brevard street.
Stiles street, from Central avenue to High street.
East street, from Hillen street to Front street.
Exeter street, from Hillen street to Front street.
Exeter street, from Lexington street to Fleet street.
Fawn street, from East Falls avenue to President street.
Fawn street, from President street to Central avenue.
Fayette street, from Fallsway to Central avenue.

SERVICE AND DISTRIBUTION—TYPE "B" CONDUIT.

Park avenue, from Preston street to Biddle street.
Pratt street, from High street to Lloyd street.
Druid Hill avenue, from Eutaw street to Preston street.

Lateral Distribution Conduit.

Tiffany alley, from Mosher street to McMechen street.
Tiffany alley, from Orchard street to point 100 feet south.
Bradford street, from Baltimore street to alley north.
Port street, from Baltimore street to alley north.
Rose street, from Baltimore street to alley north.
Belnord avenue, from Baltimore street to alley north.
Glover street, from Baltimore street to alley north.
Streeper street, from Baltimore street to alley north.
Curley street, from Baltimore street to alley north.
Curley street, from Baltimore street to alley south.
Hare street, from Baltimore street to alley north.
Hare street, from Baltimore street to alley south.
Robinson street, from Baltimore street to alley south.
East avenue, from Baltimore street to alley north.
Brunt street, from Baker street to point 60 feet north.
Brevard street, from Wilson street to alley north.
Etting street, from Baker street to Gold street.
Baker street, from Brunt street to Etting street.
Carter street, from Lafayette avenue to Bowen street.
Calvert street, from Lafayette avenue to White's alley.
White's alley, from Calvert street to second alley east.
Camel alley, from Cathedral street to point 95 feet west.
Dickson street, from Mosher street to alley north.
Dickson street, from Mosher street to alley south.
Dickson street, from Lafayette avenue to alley north.
Dickson street, from Lafayette avenue to alley south.
Jasper street, from Druid Hill avenue to alley south.
Fremont avenue, from Waltemeyer court to point 143 feet south.
Foster street, from Dolphin street to Enon alley.
Carlos terrace, from Federal street to alley north.
Carter street, from Federal street to alley north.
Carter street, from Federal street to alley south.
Jackson street, from Fort avenue to alley north.
Boyle street, from Fort avenue to alley north.
Gold street, from Etting street to Stoddard alley.
Stoddard alley, from Gold street to point 115 feet north.
Lafayette avenue, from Greenmount avenue to Carter street.
Homewood avenue, from Preston street to Mura street.
Mura street, from Homewood avenue to alley west.
Hampson street, from Bolton street to alley east.

Jordan alley, from Presstman street to North avenue.
Lovegrove alley, from Adams street to alley south of Lafayette avenue.
Hargrove alley, from Adams street to point 75 feet south of Lafayette avenue.
Brewer street, from Dolphin street to alley north.
Brewer street, from Dolphin street to alley south.
Brunt street, from north of Lafayette avenue to south of Lafayette avenue.
Division street, from Dolphin street to alley south.
Etting street, from Dolphin street to alley south.
Etting street, from Dolphin street to alley north.
Etting street, from alley south of Lafayette avenue to alley north of Lafayette avenue.
Elder alley, from Orchard street to Biddle street.
Jenkins alley, from alley south of Lafayette avenue to alley north of Lafayette avenue.
Jordan alley, from alley south of Lafayette avenue to alley north of Lafayette avenue.
McAllister court, from alley west of Guilford avenue to Townsend court.
Townsend court, from McAllister court to alley south of Lafayette avenue.
Little Monument street, from alley north of Orchard street to alley south of Orchard street.
Mason alley, from McMechen street to Mosher street.
Morris alley, from alley north of Lafayette avenue to alley south of Lafayette avenue.
Morris alley, from alley north of Bloom street to alley south of Bloom street.
Cecil alley, from Pennsylvania avenue to 157 feet east.
Morton alley, from Lanvale street to alley north.
Lovegrove alley, from Lanvale street to alley south.
Mason alley, from Lafayette avenue to alley north.
Mason alley, from Lafayette avenue to alley south.
Adams street, from Maryland avenue to Morton alley.
Morton alley, from Adams streets to alley south of Lafayette avenue.
Rutter street, from Dolphin street to Enon alley.
Vincent alley, from Laurens street to P., B. & W. R. R. tracks.
Oak street, from Malory lane to University parkway.
Charles street, from University parkway to Stratford road.
Thirty-ninth street, from University parkway to Oak street.
Buchanan street, from Twenty-fifth street to Ware alley.

One of the most important lines built during 1913 was a new trunk line in East Baltimore street and Patterson Park avenue, which provides a new means of entrance into the city for the high tension cables from McCall's Ferry.

Under normal conditions all of the electrical energy used in Baltimore for light and power and to operate the street railway system is supplied to the Consolidated Gas Electric Light and Power Company and the United Railways and Electric Company by the Susquehanna hydro-electric plant of the Pennsylvania Water and Power Company. This energy is delivered to the Highlandtown sub-station on the Philadelphia road, near Eighth street, through an aerial transmission line at a potential of 70,000 volts, and from there it is conveyed to the various distribution centers of the two local companies by means of a number of 13,000-volt underground cables, which reach their destination through the municipal conduit system.

All of the cables carrying this constantly increasing enormous amount of energy had, previous to the construction of this new line, been installed, from time to time, of necessity in one trunk line of conduits from the Highlandtown station via the Philadelphia road and Fayette street to the junction point at Fayette and Wolfe streets, where the different cable-runs diverge, until the line could not be made to accommodate an additional high-tension cable without further aggravating the then already too serious temperature conditions and inviting extra hazardous break-downs which result almost invariably in tying up the electrical activities of the entire city for an appreciable period.

To eliminate this condition and also to follow the custom universally observed in well-planned distribution systems of providing two entirely isolated groups for very important cables, whereby those in one line are always immune from disturbances from the other, a new specially-designed conduit line of such capacity for taking care of future development as to be compatible with the present rapid growth of the city was constructed in Baltimore street from the eastern city limits to Patterson Park avenue, and in Patterson Park avenue from Baltimore street to Pratt street, where it forms a junction with previously existing trunk lines; these, in turn, can be made to serve as runs to the various distribution centres and possess the additional advantage of providing independent paths for the cables to any one station.

The design of the new line is the culmination of exhaustive study and will easily meet the most exacting demands of this class of transmission with the utmost efficiency, especially as regards the ready dissipation of the enormous amount of heat generated with correspondingly small temperature rise in the cables.

In order that a ready comparison may be made of the amount of conduit constructed each year, and the cost thereof, a summary setting forth the construction under the several different classes of work is hereto appended under the title of Table L.

MANHOLES AND HOUSE CONNECTIONS.

During the year there were built in the course of the regular construction 258 trunk manholes, 141 service and distribution boxes, 160 lateral distribution manholes, and 216 manholes and junction boxes in connection with Type "B" construction. The number of houses connected with the subway system by direct underground connection was increased by 653, making the total number so served 8,557.

MISCELLANEOUS CONNECTIONS.

There were also constructed the following miscellaneous connections:

Trolley pole connections	78
Arc light connections	671
Fire alarm call-box connections	21
Police call-box connections	14

Connections from city manholes to Chesapeake and Potomac Telephone Company's manholes	4
Connections from city manholes to police and fire alarm telegraph manholes	10
Terminal pole connections	3
Lateral distribution pole connections	152

UNIT COSTS.

The following figures show the cost of the different divisions of the work, based on a duct-foot unit:

GENERAL EXPENSE.

Organization	$.0076 per duct foot.
Office	.0091 per duct foot.
Plans	.0055 per duct foot.
Total	$.0222 per duct foot.

TRUNK.

Excavation	$.0761 per duct foot.
Concrete	.0190 per duct foot.
Manholes	.0304 per duct foot.
Conduit	.0510 per duct foot.
Total	$.1765 per duct foot.

SERVICE AND DISTRIBUTION.

Manholes	$.0545 per duct foot.
Conduit	.1539 per duct foot.
Total	$.2084 per duct foot.

SERVICE AND DISTRIBUTION—TYPE "B."

Manholes	$.0626 per duct foot.
Conduit	.1880 per duct foot.
Total	$.2506 per duct foot.

LATERAL DISTRIBUTION.

Manholes	$.0330 per duct foot.
Conduit	.2105 per duct foot.
Total	$.2435 per duct foot.

EXPENDITURES.

The funds to carry on the construction were derived from the 1962 Conduit Loan, approved by the voters of Baltimore City in the fall of 1912.

The expenditures for the year 1913 were as follows:

Construction salaries	$16,060 49
Construction expenses (including all labor, material and miscellaneous expenses)	503,477 34

The expenditures for the operating and maintenance of completed conduits, which were borne by the general tax levy, amounted to $10,699.90.

NOTICES TO REMOVE POLES AND WIRES.

Notices to remove all poles and overhead wires at the following locations were issued during the year to the various wire using companies:

Front street, from Hillen to Forrest street.

Laurens street, from Fulton to Fremont avenues.

Fremont avenue, from Baltimore street to Columbia avenue.

In the area bounded by Pennsylvania avenue, Franklin street, Eutaw street, Biddle street, Cathedral street, Oliver street, Maryland avenue, Jones' Falls and North avenue.

In the area bounded by the east side of Charles street to the south side of Mulberry street, to the west side of St. Paul street, to the north side of Saratoga street, to the east side of Charles street.

A large proportion of the 1913 work was planned and prosecuted with a view of placing conduits in the beds of the streets before the paving improvements were made. As lists of streets to be paved are received by this office from time to time, the same are carefully considered, and where it is found that conduits would be necessary or advantageous at some future time in order to make the subway system complete and comprehensive, the department immediately proceeds to place lines in those streets. In a great majority of instances such streets are not contiguous to the system which is now in active operation, and therefore the conduits so built will not be available for cable occupancy until connected up so as to form a part of the net work of "live" lines.

For this reason, while many isolated sections of conduits have been installed during the year, notices to remove poles and wires in those parts of the city cannot be issued until the lines are so connected as to accommodate the cables of the various duct space lessees. As soon, however, as these connecting lines can be installed, an immense number of poles may be ordered removed and the wires placed under ground.

DUCT SPACE OCCUPIED AND CONDUIT RENTALS.

The United States Government was added to the list of lessees, the Treasury Department having executed, under date of July 1, 1913, a lease for duct space in the conduits connecting the Postoffice building with the Custom House and Appraisers' Stores buildings.

The rental collected during the year amounted to $120,800.46, derived from the following sources:

	Collected During 1913.	Previously Collected.	Total.
American Tobacco Co.............	$3.48	$1.74	$5.22

*Indicates cable withdrawn

Municipal cables for police telegraph, fire alarm telegraph, electric light and power, etc., occupy more than 315,000 feet of the ducts, for which no rental is charged. Had rental at the established rate been collected for this space, the year's collections would have been increased by approximately $15,000.

ELECTROLYSIS.

It seems essential that a brief article relative to the harmful effects of electrolytic action upon underground metallic structures should be presented in consonance with and as a supplement to former publications upon the same subject submitted to the commission during its early career.

The general nature of this action and the causes which promote it are too well known to warrant an elaborate disquisition. Briefly, it may be compared to the action which occurs in the ordinary commercial electro-plating bath. The current which enters the bath through the anode of silver, or some other metal suspended therein, flows through the electrolyte, composed of a metallic salt, and out through the cathode or the article to be plated. The action which follows causes the electrolyte to be decomposed into its constituents which appear at the electrodes, the metallic element forming a deposit upon the cathode and the remaining element entering into chemical combination with the anode which, as a result, is ultimately destroyed. In like manner, the return current from an electric railway system operating a ground negative return, flowing in its path from the cars back to the generating station, creates a condition similar to what exists in a plating bath for the reason that all of this current does not confine itself solely to the rails, but diverts, in part, to all available paths contiguous to the tracks, such as water pipes, gas pipes, the lead sheathings of underground cables, etc., dividing among them inversely as their respective resistances. At the point where the various subterranean structures receive the stray current from the tracks the rails are analogous to the anode and the structures to the cathode; consequently, at these locations the rails waste away and the structures are left unharmed. But at those points where the vagrant currents leave the structures, as they eventually are compelled to do, in order to drain to the generating station or to some other path of lower resistance, the conditions are reversed; in other words, the subterranean structures serve as anodes, and, as a result, their gradual disintegration ensues, provided, of course, that the surrounding medium or earth contains sufficient moisture and metallic salt in solution to act as an electrolyte. As to this latter condition, observation has demonstrated conclusively that the common soils, especially in large cities, contain all the necessary elements in sufficient quantities to make convenient electrolytes and, therefore, it can be generally assumed that wherever a difference of potential exists between any underground metallic structure and the earth, rails, or some other structure, indicating a flow of current of one to the other, the structure from which the current is flowing is undergoing disintegration by the process of electrolysis and will eventually be destroyed if the action is allowed to continue.

During the progress of its work this department has found many examples of the evil effect of electrolysis upon the various pipe systems in this city; in some cases the life of the structures has been seriously impaired, while in other instances the action has been so acute, or has continued for a sufficient length of time, to have caused complete destruction of the properties, necessitating their renewal. It is unquestionable that the process of electrolysis in this city is producing a gradual but constant dissolution of the metallic subterranean structures in certain localities, chiefly in the vicinities of the railway sub-stations, and that it will be but a matter of time before serious losses will be incurred as a result. To emphasize this prediction it is only necessary to mention that within the last several months this department discovered a certain underground system, which performs a highly important service for the city, to have been rendered prematurely unsafe, due entirely to electrolytic action. As a matter of fact, the structure was in such a critical condition at one location as to be unfit for use and is now being renewed.

The only phase of the question in which this department is vitally interested, however, appertains to the effect of this action upon the underground cables housed in the municipal conduits, and, as may be noted from the earlier reports, not a little apprehension was entertained a few years ago regarding the safety of the cables. These fears were not unwarranted, because at that time the sheathings of quite a number of cables showed evidence of deterioration; but since then, however, conditions have changed to such a marked degree that attention is seldom now directed to a case of this nature and most of the rare instances brought to notice at the present time show unmistakable signs of having occurred years past. The principal factors responsible for the extremely enviable conditions now enjoyed by underground cables as compared with other subterranean structures, in so far as concerns the harmful effects of electrolysis, are the greatly increased number of cables in the conduits and that the lead sheathings of these cables are electrically connected or bonded one to the other in every manhole. The sheathings thereby constitute a very effective net-work of electrical drains of enormous capacity and, inasmuch as this net-work ties in eventually with the negative bus-bars in the railway sub-stations, either by means of suitable independent copper returns installed for that particular purpose or through the sheathings of a great many railway cables running direct to the stations, the vagrant currents picked up by the cable systems drain back to the generating stations through a path of such low resistance as to preclude leakage en route. With such attractive conditions it is axiomatic, from the preceding explanation, that the possibility of destructive action is rendered remote. This condition, of course, does not hold good in outlying and isolated trunk lines containing cables whose sheathings are of comparatively small capacity, and it is only in such localities that conditions are favorable to destructive action; but even in these cases remedial measures can usually be applied that will reduce to a minimum the possibility of deterioration.

In spite of the confidence felt as to the immunity of the great majority of cables from depreciation, comprehensive electrolytic surveys and tests are constantly being conducted to determine where hazardous conditions may have arisen, due to unforeseen changes, in order that precautionary measures may be applied to counteract any injurious action. In this connection this department stands ready at all times to co-operate with and to render all possible assistance to the lessees of the conduits in safeguarding their equipment from the ravages of electrolysis.

It is obvious that the protection of pipe systems and similar metallic structures is not pertinent to the department and is entirely beyond the pale of its jurisdiction. Consequently, it cannot render a positive opinion upon the conditions of the systems, but, inasmuch as electrolytic surveys showing the conditions of one structure necessarily reflect the condition of other structures, the department believes, from the knowledge it has thus acquired from its cable surveys, that probable heavy losses might be averted in the future if the different interests maintaining the structures were to conduct regular systematic investigations for the purpose of protecting their properties against electrolytic disintegration. In this connection it may be advisable to mention that remedies to counteract unfavorable conditions should never be applied inadvertently, but should be selected and administered as the result of an extensive reconnaissance and exhaustive tests; otherwise, the trouble may be aggravated still further. Cases of this nature have frequently occurred as a result of the promiscuous bonding together of structures at positive points where a temporary relief may have been secured at the expense of endangering the system to a far greater extent in other localities. As no two cases are alike, no particular remedy can be recommended; but the most efficient method, possessing the time-honored sanction of authority, for the prevention of electrolytic disintegration requires the installation of a suitable independent return, running from the negative buses in the railway sub-stations and tying in with the structure at the proper drainage point.

In conclusion, it may be added that the question of electrolysis is considered of such vital importance by some cities that legislation has been enacted compelling the railway companies to take care of their return equipment in such a manner as to preclude, as far as possible, the transfer of currents to metallic structures, thereby insuring all underground property to a certain extent against unnatural corrosion.

Respectfully submitted,

RALEIGH C. THOMAS,
Chief Engineer.

REPORT

OFFICE OF THE BOARD OF FIRE COMMISSIONERS.

BALTIMORE, January 1, 1914.

To the Honorable the Mayor and City Council of Baltimore.

GENTLEMEN:

The Board of Fire Commissioners respectfully submit herewith the following as the fifty-fifth annual report of the Fire Department of the City of Baltimore for the year ending December 31, 1913.

FIRES.

During the year 1913 the Fire Department responded to 1,978 alarms of fire. As compared with 1912, there was an increase of 31 alarms.

The number of alarms received during the year are classified as follows:

Number of brick, stone and iron buildings	1,508
Number of wooden buildings	144
Other than buildings	256
False alarms	70
	1,978

Number of fires in brick, stone or iron buildings	1,508
Number of fires in wooden buildings	144
Number of fires in other than buildings	256
	1,908

Number of fires confined to building or place of origin	1,895
Number of fires extending to adjoining buildings	8
Number of fires extending beyond adjoining buildings	5
	1,908

IMPROVEMENTS, 1913.

Installation of additional boiler at the Pumping Station of the High Pressure Service.

Automobile runabouts purchased for use of Deputy Chief and First, Third, Fourth and Eighth District Engineers.

Engine Companies Nos. 4, 5, 8, 9, 18, 19 and 25, equipped with automobile hose wagon.

The engine of Engine Company No. 32, equipped with Christie tractor.

The engine of Engine Company No. 5 equipped with couple-gear tractor.

The truck of Truck Company No. 1 equipped with American-LaFrance Fire Engine Company tractor.

Engine Companies Nos. 5, 8, 9, 10, 11, 12, 13, 18, 19, 26, 27, 28, 34 and 38, equipped with portable hydrant-heads for High Pressure Service.

The installation of 6,000 feet of the best quality of 2½-inch rubber-lined fire hose.

The installation of 2,000 feet of the best quality of 2½-inch rubber fire hose.

The installation of 2,000 feet of the best quality of 3-inch rubber-lined fire hose for use on fireboats.

The installation of twelve Bresnan cellar nozzles.

The installation of a pulmotor on Department ambulance.

The installation of a Jumbo nozzle, with special portable hydrant-heads and tips for nozzles of 2½-inch, 3-inch, 3½-inch and 4-inch, for direct connection with system of the High Pressure Service.

The Repair Shop equipped with tools so as to take care of departmental work generally.

A general system of building inspection for the purpose of reporting violations of the building laws.

A fire-prevention bureau established under command of Capt. Edgar B. McKnew, No. 27 Engine Company, on October 29, 1913, and which operation has resulted in a very material reduction in fire hazards.

A modern fireboat provided in place of former fireboat "Cataract," and which will be placed in service the early part of the coming year.

The installation of Truck Company No. 18 at quarters of No. 20 Engine Company, North avenue and Tenth street, Walbrook.

IMPROVEMENTS, 1914.

Tractors for fire engines.

Automobile chasses for hose wagons.

Automobiles for district engineers.

Additional red lights for fire-alarm boxes.

PUBLIC BUILDINGS.

Heating and lighting City Hall, City Hall Annexes and Court House, from Pumping Station of High Pressure Fire Service.

EXPENDITURES.

The expenditures for the Fire Department for the year 1913 were as follows:

Salaries	$751,932 03
Expenses	197,902 94
Truck Company No. 18, salaries	7,191 11
High Pressure Service	14,538 82
Hydrant heads	5,775 00
Fireboat "Cataract"	46,302 61
Pumping Station, boiler	15,000 00
Automobiles, district chiefs	6,000 00
Chasses, hose wagons	29,194 14
Tractors, engines and trucks	9,375 00

REPORT

OF THE

CHIEF ENGINEER

1913

REPORT.

Office of The Chief Engineer.

Baltimore, January 1, 1914.

To the Honorable the Board of Fire Commissioners :

Gentlemen — I have the honor to submit herewith the annual report of the Chief Engineer, it being the Fifty-fifth Annual Report of the paid Fire Department.

Incorporated herewith are statistical statements showing operations of the Fire Department for the year in detail.

It is my sad duty to report the death of the following members of the Fire Department during the year :

JAMES J. REYNOLDS,

CAPTAIN,

NO. 32 ENGINE COMPANY,

Age 55 Years.

Appointed July 20, 1889.

Died February 25, 1913.

JOHN CALDER,

ENGINEMAN,

No. 11 ENGINE COMPANY,

Age 66 Years.

Appointed October 8, 1870.

Died September 4, 1913.

HENRY R. SEIPPEL,

PIPEMAN,

NO. 5 ENGINE COMPANY,

Age 64 Years.

Appointed December, 1, 1874.

Died January 21, 1913.

JOSEPH H. DALY,

LADDERMAN,

NO. 5 TRUCK COMPANY,

Age 59 Years.

Appointed January 15, 1881.

Died December 22, 1913.

EMIL MYERS,

Pipeman,

No. 27 Engine Company,

Age 28 Years.

Appointed August 15, 1909.

Died May 31, 1913.

Died as result of injuries received in company quarters.

WILLIAM L. ERDMAN,

PIPEMAN,

NO. 31 ENGINE COMPANY,

Age 31 Years.

Appointed July 1, 1907.

Died March 3, 1913.

PENSIONER THOMAS H. HUMPHREYS,

Age 72 Years.

Appointed July 12, 1873.

Retired July 12, 1892.

Died July 21, 1913.

PENSIONER JOHN H. DEAL,

Age 72 Years.

Appointed February 1, 1872.

Retired January 9, 1908.

Died May 2, 1913.

The installation of new companies at the following locations:

Truck Company installed at quarters of No. 17 Engine Company, Fort avenue and Haubert street.

Truck Company installed at quarters of No. 29 Engine Company, Park Heights avenue, near Kate avenue.

Engine Company installed at quarters of No. 14 Truck Company, Gorsuch avenue, near Harford Road.

The installation of an engine and truck company in the vicinity of Remington avenue and Twenty-ninth street.

The extension of the High Pressure Fire Service.

The above recommendations are, in my opinion, absolutely necessary, on account of the fact that these sections are growing rapidly and have not sufficient fire protection at the present time.

I desire to express my sincere appreciation to the Board of Fire Commissioners, as well as members of the Fire Department generally, for co-operation in maintaining the efficiency of the service.

The Police Department and Fire Insurance Salvage Corps have my sincere thanks for the assistance rendered the service in the performance of duty.

Respectfully submitted,

AUGUST EMRICH,
Chief Engineer.

Total membership		843

VACATIONS.

Vacations are granted members of the uniformed force as follows:

FIRE DEPARTMENT.

Chief Engineer—Thirty-one days.

Deputy Chief Engineer—Twenty-one days.

District Engineers, Superintendent of Machinery, Assistant Superintendent of Machinery and captain commanding Marine Division—Eighteen days.

Captains and lieutenants—Fourteen days.

All other members—Twelve days.

FIRE ALARM TELEGRAPH.

Superintendent of Telegraph—Twenty-one days.

Telegraph operators—Fourteen days.

Telephone operators—Fourteen days.

Lineman—Fourteen days.

Assistant linemen—Twelve days.

Batteryman—Twelve days.

HOLIDAYS.

All members of uniformed force granted one day holiday each week.

INJURED AND SICK.

All members attended by Department surgeon while on injured or sick leave at expense of Department.

PENSIONS.

Baltimore City Charter, 1900, *Section* 70—"The Board of Fire Commissioners of the City of Baltimore may retire from office in the Fire Department any permanent or call member thereof who has become permanently disabled while in the actual performance of duty, or who has performed faithful service in the Department for a period of not less than twenty consecutive years, or who may become unable to perform further service by reason of age or other physical or mental disabilities, and place the member so retired upon a pension roll; and said Board may also provide for the relief of the widows and children of firemen who may be killed in the discharge of duty. The amount of such annual pension to be allowed by said Board of Fire Commissioners to each pensioner shall be equal to one-half the yearly amount then being received by him for service in said Department at the time of such retirement per annum, payable in monthly installments."

High Pressure Service.

The area covered by the mains of the pipe line system of the High Pressure Fire Service is bounded by Pratt, Eutaw, Franklin, Howard, Saratoga, Gay, Baltimore and South streets and covers about 170 acres. The total length of the mains is 8.856 miles and consists of .066 mile of 30-inch, .025 mile of 24-inch, 3.24 miles of 16-inch and 5.30 miles of 10-inch, as well as 2 miles of 8-inch used as hydrant branches.

All pipe is lap-welded, soft, open hearth steel, designed for a maximum working pressure of 300 pounds per square inch. The 8, 10 and 16 inch pipes are 7-16 inch thick, and the 24-inch pipe is ½ inch thick; the standard length is 20 feet.

The pipe lines, including valves, hydrants and other fittings, were tested and made tight before backfilling, at a pressure of 600 pounds per square inch.

All valves are generally located on property lines, ordinarily four at each street intersection, so that, in all but two or three cases, any single side of a block may be cut out of service without interfering with the operation of the system at any time.

The hydrants are of a specially designed flush type. Hydrants are provided with sidewalk cover, upon removal of which there can be connected the portable service head, which locks into position by a single turn. Heads have four 2½-inch outlets, each provided with a regulating valve, so designed to act as a shut-off valve, with outlet in top of head for monitor nozzle directly thereto. The total number of hydrants in the system is 226. Hydrants are located between street intersections, between corners of building lines and curb corners, at alley intersections and alternating on opposite sides of streets.

A "Jumbo" monitor nozzle, with 2½-inch, 3-inch, 3½-inch and 4-inch tips, with a capacity of 7,000 gallons of water per minute, which can be operated by one man, is provided for direct connection on hydrant for the heaviest fire duty.

Fresh water is used in the system, with harbor suction and connections for fireboats, in the event of a break in the water supply or in the event of the pumping station being shut down from any cause.

The crew assigned to the pumping station is taken from members of the Fire Department and is operated as a regular fire company, under charge of a captain and absolute control of the Board of Fire Commissioners.

FIRES AT WHICH RESCUES WERE MADE.

Sunday, March 9—Box 1426, 2.19 A. M. The family of Mr. Frank Hurwitz, 919 East Baltimore street, whose escape was cut off by fire and smoke, were rescued by the following members of the Department: No. 3 Engine Company, Capt. John Grasmick, Lieut. Louis Harrer, Pipeman William Wambold, Howard H. Elliott, Joseph Deasel, John Banearski, Albert C. Meinschein and Substitute Herbert W. Rider; No. 32 Engine Company, Capt. Robert J. Thompson, Lieut. Joseph F Danaher, Assistant Hostler Frederick W. Joeckel, pipemen James M. Ward, Samuel C. Smith and Edward J. Cavanaugh; No. 1 Truck Company, Capt. James V. McCarron, Tillerman Harry A. Donahoo, Assistant Hostler August C. Hartman, laddermen Joseph H. Daly, Joseph A. Gallion, Gerlack Debus, Albert J. Russell, John Schmidt and Probationer Arthur T. Guntrum.

Wednesday, April 30—Box 847, 5.20 P. M. Mr. John George, age fifty-five years, 112 West Twentieth street, whose escape was cut off by smoke, was rescued by pipemen Reginald V. Hornberger and John J. Roberts, No. 18 Engine Company, by means of an eighteen-foot ladder.

Wednesday, July 9—Box 145, 2.56 A. M. Mr. and Mrs. James Kirschowitz and four children, ages from three to fifteen years, whose escape was cut off by smoke, were taken from the third-story front room windows by means of a thirty-five foot ladder by the following members of No. 1 Truck Company: Lieut. Asa Griffith, Tillerman Harry A. Donahoo, Assistant Tillerman Joseph A. Haskell, Assistant Hostler August C. Hartman, laddermen Joseph A. Gallion, Albert J. Russell and Albert T. Cooper.

Sunday, October 5—Box 7524, 12.27 P. M. Mrs. Emma and Miss Estelle Lyness, 2905 Walbrook avenue, whose escape was cut off by smoke, were assisted down a twenty-five foot ladder from third floor by Pipeman Charles Hesse and Substitute Edward Fox, No. 20 Engine Company and Ladderman John T. Neary, No. 18 Truck Company.

Saturday, October 25—Silent, 1.55 P. M. Charles Carey, colored, age twenty-one years, 611 George street, was overcome by gas in excavation on Baltimore street, near Howard, and was rescued by Acting Lieutenant John C. Luckhardt and Pipeman Joseph P. Lyons, No. 15 Engine Company, and sent to Maryland University Hospital in the Western District Police Ambulance. Captain J. Walter Bradley, No. 2 Truck Company, was overcome by gas and rescued by Lieut. Henry Miller and Pipeman Joseph P. Lyons, No. 15 Engine Company, and Tillerman William C. Talbott and Ladderman John E. Mack, No. 2 Truck Company, and conveyed to Maryland University Hospital in the Western Police Ambulance.

Tuesday, October 28—Box 5226, 4.37 A. M. The family of Mr. Gregory Avado, 224 South Eutaw street, consisting of Mrs. Mary Avado, thirty-six years; Annie, twelve years; Vincent, thirteen years; Mary, six years; Jennie, eight years, and Samuel, nine years, were rescued by Acting Deputy Chief James A. Campbell, Acting Fifth District Engineer Edward Tauber, Capt. William J. McDonald, Lieut. Henry Miller, Assistant Hostler James E. Murphy and Pipeman Joseph P. Lyons, No. 15 Engine Company; Capt. Edgar B. McKnew, No. 27 Engine Company; Lieut. Louis R. Bell, pipemen Charles J. Schalter and A. J. Heird, No. 2 Hose Company; Assistant Hostler Howard O. Ely and Ladderman Henry J. Carle, No. 2 Truck Company, and Pipeman Thomas H. Linthicum, No. 23 Engine Company. Were sent to Maryland University Hospital in the Western and Southern Districts Police ambulances for treatment.

FIRES WHICH WERE ATTENDED BY LOSS OF LIFE.

Monday January 20—Box 428, 8.44 P. M. Mr. George T. Oliver, age fifty-nine years, 1031 West Lexington street, fell down stairs with a lighted coal oil lamp, causing his clothes to catch fire and was burned to death.

Thursday, January 30—Special, 9.50 A. M. Mrs. Mary Purdy, age sixty-nine years, 1009 Sassafras Court, was burned about the entire body and sent to Mercy Hospital in Central District Ambulance, where she died the P. M. of same date. Cause, hot coals igniting dress.

Friday, February 7—Box 381, 12.50 P. M. Mary A. Johnson, age forty-seven years, 1350 North Stricker street, while kindling fire her clothes became ignited and she was burned about the body and face and removed to Maryland Homeopathic Hospital, where she died 6.15 P. M. same date.

Sunday, February 16—Special, 8.40 A. M. Mrs. Lena Schuman, age forty-two years, 120 South Caroline street, was burned about her entire body and sent to the Hebrew Hospital in Eastern District Police Ambulance, where she died at 6 A. M. the 17th instant. Cause, clothes igniting from a gas stove.

Friday, March 7—Silent, 10.55 A. M. Quarantine Anchorage, Patapsco River, Anne Arundel County, Md. The Steamship Alum Chine was blown up in Baltimore Harbor by dynamite explosion. Sinking of Tugboat Atlantic, belonging to Atlantic Transport Company and a railroad barge of the Pennsylvania Railroad Company. Loss of life estimated at sixty persons. Fireboat Deluge rendering assistance.

Wednesday, April 23—Box 517, 9.43 A. M. Russell street and Harmon lane. Mr. George Cox, age twenty-five years, 1710 Pennsylvania avenue, was severely burned about the body and sent to the Maryland University Hospital in the Southern District Ambulance, where he died at 1.10 P. M. same date. Cause, coming in contact with live wire.

Wednesday, May 21—Box 561, 4.35 P. M. Foot of Peach alley. Richard Storrey, of 904 Peach alley, age twenty-seven years, was severely burned about the body, face and hands, and removed to the Maryland University Hospital in the Southern District Police Ambulance, where he died on the 23d instant, from result of his burns.

Thursday, June 12—Special, 5.50 A. M. Elizabeth Williams, colored, age eighty-eight years, 226 North Pine street, was burned about the entire body, and removed to the Maryland University Hospital in the Western District Police Ambulance, where she died the P. M. of the same date. Cause, burning paper.

Sunday, June 15—Box 5321, 3.20 A. M. Mary Curtis, colored, age thirty-one years, 542 Burgundy alley, was severely burned about the body, and was conveyed to the Maryland University Hospital in the Western District Police Ambulance, where she died at 9 A. M. the same date. Cause, coal oil lamp.

Thursday, June 19—Box 541, 6.30 A. M. Della Williams, colored, age twenty-four years, 439 West Henrietta street, was burned about the entire body and removed to the Maryland University Hospital in the Southern District Police Ambulance, where she died at 3 P. M. the same date. Cause, coal oil lamp.

Wednesday, July 2—Box 247, 8.52 A. M. Miss Teresa E. Weber, age thirteen years five months, 2110 East Madison street, employed as a salesgirl at 581 North Gay street, was found on second floor unconscious by Capt. James V. McCarron, acting Second District Chief, who carried her to a ladder at front window and passed her to members of No. 9 Engine and No. 5 Truck Companies. She was removed to St.

Joseph's Hospital by Northeastern District Police Ambulance, where they pronounced her dead. Cause, suffocation.

Tuesday, July 8—Silent, 6.08 P. M. Abraham Cohen, age five years six months, 1610 East Pratt street, was burned about the entire body, and removed to the Hebrew Hospital in the Eastern District Police Ambulance, where he died at 11 P. M. the same date. Cause, playing with gas stove.

Wednesday, July 16—Box 546, 4.19 P. M. TABLE SHOWING THE DIFFERENT CAUSES OF FIRES AND ALARMS DURING 1913.

Alcohol lamp	1
Back-fire	24
Burning rubbish	32
Building collapsing	2
Burning paper	12
Bonfire	7
Blown fuse	4
Balloon	4
Boiling wax	1
Burning hornets' nest	1
Burning insulation	4
Burning sulphur	1
Burning celluloid	1
Coal oil stove	42
Coal oil heater	15
Coal oil lamp	50
Carboy acid	1
Cigar lighter	1
Defective flue	70
Dynamite explosion	1
Defective wiring	13
Defective peanut roaster	1
Ditch cave-in	1
Electric wire	17
Electric iron	2
Explosion of waterback	1
Electric light	2
Explosion of chemicals	1
Explosion of ammonia tank	1
False alarms	71
Fireworks	2
Friction	1
Fire-pot	1
Gas jet	43
Gas stove	22
Gasoline stove	30
Gasoline	20
Gas heater	3
Gas pipe	1

TABLE SHOWING THE DIFFERENT CAUSES OF FIRES AND ALARMS DURING 1913—*Continued.*

Gas explosion	8
Gas tank	2
Gas iron	4
Gas range	3
Hot coals	6
Hot ashes	13
Hot rivet	1
Hot box	1
Iron heater	1
Incendiary	5
Lighted match	60
Lighted candle	36
Lighted lantern	8
Lighted paper	3
Lighted pipe	1
Lightning	4
Lighted cigarette	1
Lighted torch	5
Overheated stove	32
Overheated stovepipe	23
Overheated boiler	2
Overheated range	7
Overheated furnace	7
Overheated chimney	1
Overheated oven	1
Overheated kiln	3
Overheated stack	3
Pitch boiling over	10
Playing with matches	40
Playing with fire	4
Pan of grease	22
Pilot light	1
Plumber's fire-pot	3
Pan of camphor	1
Painter's torch	1
Rekindle	5
Rivet heater	1
Rear-end collision	2
Soot	87

TABLE SHOWING THE DIFFERENT CAUSES OF FIRES AND ALARMS DURING 1913—*Concluded.*

Sparks	45
Spontaneous combustion	8
Smoking in bed	5
Sulphur boiling over	1
Slacking lime	1
Tinner's pot	3
Thawing water pipe	3
Unknown	866
Unusual smoke	104
Unusual steam	5
Unusual light	9
Unnecessary alarm	3

REPORT

OF THE

Superintendent of Fire-Alarm Telegraph

1913

REPORT

Baltimore, January 1, 1914.

To the Honorable Board of Fire Commissioners.

Gentlemen:

Although we have had frequent requests from the Sewerage Commission, Paving Commission and City Engineers' Department to alter the alignment of overhead, and in some cases underground equipment, this Department has maintained the high efficiency of its service during the past year.

Every box alarm has been promptly communicated and the telephone calls with which in many instances the operator has had to use some judgment and patience with excited persons giving notice of fire; these calls also have had such attention that the efficiency of the employes has had further demonstration.

The lines and equipment generally have been kept up to a high standard. The regular tests for conductivity and insulation have enabled us to anticipate line trouble, and our exemption from storms has kept us free of the disasters of preceding years.

The underground service has been extended. The lines on Frederick avenue have been placed in conduits to the city limits, with the exception of a short section at Gwynn's Falls, where a new bridge in course of construction has delayed the placing of conduits.

Preparation was made to change the Fort avenue lines from poles to conduits, but the subway work being delayed, a portion of the cable purchased for this section was used at other places.

Several other important sections have been changed and we will be enabled to take down a number of poles and transfer some to the companies who will be compelled to remain overhead until the Electrical Commission completes the connections necessary to order them into the conduits.

Construction work during the year embraced the removal of 60 poles, 216 poles were reset and 46 new poles used to replace such as were decayed and unsafe.

The 46 poles mentioned were taken from other sections and used from time to time avoiding the expense of purchasing for this work.

Eleven thousand six hundred and twelve feet of two-inch iron pipe was laid for installation of new boxes and lateral extensions to meet city and Chesapeake and Potomac trunk lines.

Nine and a half miles of wire were taken down; five and a half of which was used in connecting Box No. 1925, foot of Second avenue, Canton, and changes on Pennsylvania avenue.

Two hundred and fifty-one cross-arms were renewed, 18 manholes built, 13 hand-boxes placed and five cable boxes installed on poles to provide connections with underground service.

Circuits Nos. 37 and 38, entirely underground, were made by changes in circuits 14, 16 and 18, relieving the latter of some boxes and improving the condition of circuits in neighborhood they are located.

The Chesapeake and Potomac Telephone Company, by permission of the Board of Fire Commissioners, rebuilt the Gorsuch avenue line embracing 46 poles from Harford road west.

Connecting new boxes and extending underground service, 32,880 feet of 2-wire, 4,067 feet 4-wire, 1,050 feet 6-wire, 125 feet 10-wire, 11,750 feet 12-wire, 1,000 feet 13-wire, 500 feet 14-wire cable was laid.

For repairs, 2,030 feet 2-wire, 220 feet 4-wire, 795 feet 6-wire, 25 feet 10-wire, 550 feet 12-wire, 40 feet 13-wire cable was used.

Some changes were made in lighting fixtures at the High Pressure Pumping Station. The arc lights which were unsatisfactory, were removed and open lights with reflectors substituted. Some additional wiring was done in the boiler-room to provide a more efficient illumination.

All changes and repairs in lighting equipment in engine-houses has been done by employes of this Department with slight expense for outside help.

The following fire alarm boxes were installed during the year:

1427—Granby and Albemarle streets.
1428—High and Watson streets.
1826—Fleet and Potomac streets.
1925—Foot of Second avenue, Canton.
2624—Gay and Eager streets.
2724—Monument and Wolfe streets.
2725—Lakewood avenue and Madison streets.
466—Lombard and Stricker streets.
715—Brunswick street and city limits.
7323—Edmondson and Ashburton avenues.
7429—Poplar Grove and Brighton streets.
7528—Ashburton and Presbury streets.
7529—Moreland avenue and Presbury street.
7625—North avenue and Eighth street.
8123—Harford and Exeter Hall avenues.
8525—Falls road and Twenty-eighth street.
853—Callow avenue and Whitelock street.
8629—Mount Royal Terrace and Reservoir street.
88—Elgin avenue and Twelfth street.
8822—Dorchester road and Ayrdale avenue.
8823—Grantly street and Springdale avenue.
8824—Forest Park and Oakfield avenues.
8825—Carsdale and Brookline avenues.
8829—Duvall and Allendale avenues.
10–6—J. S. Young Company, Boston and Elliott streets.
10–9—G. Ober & Sons, Hull street.
10–2–5—Greenwald Packing Company, Claremont Stock Yards.
10–2–3–4—Wise Brothers, Wyoming street.

Three of the ten-pin registers were altered from inking recorders to punching instruments, eliminating the serious objections to the former style of making records and clearing the machinery from the disadvantages caused by the ink spreading over the gearing and interfering with proper operation. A new feature of propelling the paper by the substitution of an electric motor in place of the weights for moving the machinery has proven a valuable improvement to these instruments.

The care of batteries and lamps on motor-driven apparatus, which has been made a part of the work of this Department, has been systematized to the extent that this detail of the apparatus has been kept in perfect condition.

Avoiding detail, this report does not show the amount of work done during the year, but I am pleased to report commendable zeal and efficiency displayed on every occasion.

Very respectfully,

JAMES B. YEAKLE,
Superintendent of Fire Alarm Telegraph.

Department of Public Improvements—Sub-Department Harbor Board

ANNUAL REPORT

OF THE

HARBOR BOARD

TO THE

MAYOR AND CITY COUNCIL OF BALTIMORE

FOR THE

FISCAL YEAR ENDED DECEMBER 31, 1913

BALTIMORE
MEYER & THALHEIMER
CITY PRINTER

1914

DEPARTMENT OF PUBLIC IMPROVEMENTS

SUB-DEPARTMENT HARBOR BOARD

BALTIMORE, MARYLAND

JANUARY, NINETEEN HUNDRED AND FOURTEEN

OSCAR F. LACKEY, HARBOR ENGINEER, *President.*

WILLIAM D. SANNER, *Secretary.*

JAMES S. ARMIGER.

WILLIAM G. KNAPP.

MARCELLUS H. GOODRICH.

JAMES H. IRVIN, *Clerk.*

REPORT

OFFICE OF THE

HARBOR BOARD OF BALTIMORE.

BALTIMORE, January, 1914.

To the Honorable, the Mayor and City Council of Baltimore,

GENTLEMEN—The Harbor Board has the honor to submit the following report of operations of this Sub-Department for the year 1913.

The several sub-divisions of public work in charge of the Board are as follows:

1. Harbor maintenance and improvement, including the maintenance and operation of the Tug "Baltimore."

2. Iceboats, their maintenance, repair and operation when required.

3. Wharves and bridges, including the construction and repair of all city wharves, bulkheads, etc., the general supervision of all wharves and bulkheads, with a view to the enforcement of laws regulating the construction and condition of piers and bulkheads; the granting of permits to construct, extend or alter piers or bulkheads, and the repair and maintenance of all city bridges over navigable waters.

4. The supervision of "anchorages," and the enforcement of all laws and regulations relating to the anchoring of vessels in the harbor.

5. The removal of unsanitary floating matter from the harbor and docks.

6. The reception and disposal of ashes from towboats.

7. As occasion may arise, the removal of vessels sunken in the harbor.

8. The construction of the new system of piers and docks, as authorized by Ordinance No. 149, November 10, 1904, and Chapter 485 of the Acts of 1910 of the General Assembly of Maryland.

Appropriations, etc., for the year 1913 were as follows:

Salaries (engineer and clerk)	$6,130 00
Dredging harbor	55,277 00
Iceboats	23,430 00
Repairs of wharves	7,300 00
Removal of floating matter	1,935 00
Removal of ashes	1,100 00
Incidentals	500 00
Light Street Bridge	16,619 00
Public wharves and docks	19,068 00
New Improvements—	
Commercial Pier, East Baltimore	150,000 00
Total Departmental Appropriation	$281,359 00

DREDGING.

Bids for the annual dredging of the harbor were opened and the contract awarded on February 14, 1913, to the Maryland Dredging and Contracting Company, the lowest bidder, at the following prices:

Back basin and docks	18½ cts. per cu. yd.
Middle branch docks and channels	18½ cts. per cu. yd.
Ship channels and harbor	15 cts. per cu. yd.

In view of the open winter, there being little or no ice, there was no interruption to the work, in consequence of which all dredging was completed on July 7.

The work of dredging was started as early as possible, in order to have it completed before the summer months, hoping that in so doing, the conditions of the harbor might be improved and the odor from the gases eliminated. The conditions were better during the summer of 1913 than at any other time, due, perhaps, partly to the dredging, but more particularly to the fact that a great quantity of the sewerage formerly emptying into the harbor was taken care of by the new sewerage system.

The most important and greatest quantity of dredging done by private interests was the digging of the channel from the main channel of Spring Gardens to the wharf of the Westport Paving Brick Company; the amount of material removed in this case was 143,000 cubic yards.

The main channel was widened 90 feet from below Elevator "C" to a point east of the North German Lloyd Steamship Pier, 17,856 cubic yards being removed.

A 24-foot channel 90 feet wide was dredged from the main channel into the mouth of Skinner's Dry Dock, 11,896 cubic yards being removed. Also a 20-foot channel was dredged from Atlantic Wharf to Young's Wharf, this channel also being 90 feet wide.

The dredging for the Recreation Pier was completed, 77,701 cubic yards being removed.

Table No. 1 shows the locations dredged, amount dredged, area covered, and the cost of same.

TABLE No. 1.

DREDGING LOCATION.	Depth in Feet.	Width in Feet.	Area in Sq. Ft.	Quantity in Cu. Yds.	Rate.	Amount.

NOTE—H. B. denotes hard bottom.

The following dredging was done by private parties under permits granted by the Harbor Board:

	Cu. Yds.
Canton Company (Atlantic Wharf)	7,500
Canton Company, Warehouse No. 1, Ship Channel	50,000
Canton Company (new pier)	45,000
Western Maryland R. R. (Port Covington)	15,700
N. C. R. R. (Canton Pier)	22,000
Westport Paving Brick Company (Spring Gardens)	143,000
Terminal Warehouse Company, York street	1,195
Arundel Sand and Gravel Company, Fell street	1,850
N. C. R. R. (Canton)	12,691
U. S. Asphalt and Refining Company (Curtis Bay)	7,883
Ed. Renneberg & Son (Canton)	2,457
Wm. L. Miller, foot of Broadway	1,000
Maryland Trans. Co. (Back River)	4,000
McLean Contracting Co. (Spring Gardens)	21,879
Rasin Monumental Co. (Curtis Bay)	4,522
Baltimore Dry Material Company	5,008
J. S. Beacham & Brother, Marine Railway	500
Maryland Steel Company (Sparrows Point)	15,063
Total	361,248

No dredging was done by the United States Government in the Patapsco River and tributaries for the year 1913.

RECAPITULATION.

	Cu. Yds.
Harbor Board	299,259
Private Parties	361,248
Total	660,507

It can be seen from the recapitulation that there was virtually 1,000,000 cubic yards less material removed in the season of 1913 than in the season of 1912.

MARINE HOSPITAL BULKHEAD.

Little change has taken place in conditions at the Old Hospital site. The Furst Concrete Scow Construction Company was absorbed by the Arundel Sand and Gravel Company and they have added to their waterfront improvements by the construction of an additional bulkhead and pier.

The Ellicott Machine Company have bought some adjoining property and they have enlarged their plant considerably.

Both of these companies are actively engaged in their respective work. The other property, to date, has not been further developed.

The Harbor Board would again renew its recommendation that the remainder of the property owned and controlled by the city be bulkheaded and the land reclaimed.

ICEBOATS.

Whereas, the ice season of 1911 and 1912 was one of the most severe ever experienced, the season of 1912 and 1913 was the absolute reverse, as there was no call for either vessel during the season.

Both vessels were thoroughly overhauled and in compliance with the requirements of the local inspectors new tubes were placed in the main and donkey boilers of the Iceboat "Annapolis." The machinery of both vessels was overhauled, as well as the wheels, etc.

Both vessels were hauled, bottoms scraped and painted with two coats of approved paint.

The Iceboat "Latrobe" was used as an excursion boat for the Free Summer Excursions, as well as for other excursions as provided for by ordinance of the Mayor and City Council of Baltimore.

CONDENSED LOG OF ICEBOAT "LATROBE"—1913.

May 1—Excursion to Annapolis (Ladies' Recreation Centre).
May 11—Excursion to W. M. R. R. Piers, around Ft. Carroll.
May 17—Excursion to Seven-Foot Knoll.
May 21—Excursion to North Point.
May 22—Excursion to Annapolis.
May 31—Excursion to Sandy Point (Female High School Teachers).
June 10—Excursion to Baltimore Light House.
June 12—Free summer excursion.
June 19—Free summer excursion.
June 25—Excursion to Annapolis (Teachers' Association).
June 26—Free summer excursion.
July 8—Excursion to Annapolis.
July 10—Free summer excursion.
July 17—Free summer excursion.
July 24—Free summer excursion.
July 31—Free summer excursion.
August 2—Excursion to Sandy Point (Order of Eagles).
August 7—Free summer excursion.
August 11—Free summer excursion.
August 21—Free summer excursion.
August 28—Free summer excursion.
August 29—Excursion to Seven-Foot Knoll (Negro Knights of Pythias).
September 1—Excursion to Baltimore Light House.
September 4—Free summer excursion.
September 17—Excursion to Town Point, Elk River (Inland Water Ways Commission).
September 21—Excursion to Fort Carroll.

TUG "BALTIMORE."

Where the iceboats were not in demand during the season of 1912 and 1913, such was not the case with the Tug "Baltimore"; she was kept busy opening up the channels of the tributaries and rendered excellent assistance to the shipping interests. The old plow, having been destroyed in the severe season of 1911 and 1912, was replaced with a heavier one and the vessel generally overhauled, including additional ribs and heavy steel plates forward. The boilers and engines were also overhauled and the necessary repairs made.

CONDENSED LOG OF THE TUG "BALTIMORE" FOR 1913.

TIED UP FOR REPAIRS:

January	17	May	2	September	3
February	4	June	2	October	11
March	6	July	6	November	1
April	8	August	3	December	0

ANCHORAGE BUOYS.

All buoys broken were repaired and new buoys placed where needed. Those buoys that had shifted were restored to their proper location.

REPAIRS TO WHARVES.

The repairs to wharves can best be seen from the report of the Supervisor of Wharves, as follows:

REPORT OF SUPERVISOR OF WHARVES.

BALTIMORE, January 1, 1914.

MR. O. F. LACKEY, *Harbor Engineer.*

DEAR SIR— I respectfully submit my report for the year 1913:

Placed new fender logs in Back Basin.

Placed new covers on gutter drains on Pratt street bulkhead.

Placed new flooring on driveway in center of Pier No. 8, also cut off the heads of all decayed piles and painted the heads of piles with a tar covering; also made general repairs to the pier.

Repaired flooring where necessary and other repairs to Pier No. 7.

Filled sunken place on Lancaster street bulkhead.

Made repairs from time to time on small pier foot of Calvert street.

Superintended the raising of the grade on both sides of the driveway at Centre Pier so as to conform with the paving done by the City Engineer's Department.

Also the repairs and bracing of the dump platform of the Street Cleaning Department at Back Basin.

Building and repairing boats for the Scavenger's Department.

Pulled and redrove old clusters of piles on the west side of Pier 4.

Repairs and joiner work on the iceboats "Latrobe" and "Annapolis."

Repairs and joiner work on Tug "Baltimore." Took off plow and repaired same on tug.

Repairs to fender and waling pieces on Pier 4.

Painted buoys.

Placed new guard log on Lancaster street bulkhead.

Placed sectional signs on Piers 5 and 6.

The following permits were granted by the Harbor Board during the year:

No. 675—Benj. Glenn, extension, Piers Nos. 18 and 19 Light street.
No. 678—McLean Contracting Company, bulkhead, Thompson Chemical Company.
No. 683—Sewerage Commission, foot of William street.
No. 686—Sanford & Brooks, extension, Speddens' Pier.
No. 687—Sewerage Commission, foot of Exeter street.
No. 94—Schall Packing Company, extension.
No. 698—Canton Company, foot of Gwinn street.
No. 699—J. R. Byrd, shed, foot of Fells street.
No. 700—Globe Wrecking Company, paved head of Pier 5 Pratt street.
No. 701—B. C. & A. Railway Company, extension, Piers 6 and 7 Light street.
No. 705—Chesapeake Contracting Company, extension, Westport Brick Company.
No. 711—Canton Company, extension, foot of Chester street.
No. 714—McLean Company, extension, Skinners' Ship Building Company.
No. 715—Benj. Glenn, bearing piles, Elevator No. 3.
No. 716—Benj. Glenn, rebuilt, Platt's Wharf.
No. 717—Western Md. R. R., Port Covington.
No. 723—Sewerage Commission, foot of Caroline street.
No. 724—Sanford & Brooks Co., bulkhead and ties, foot of Patuxent street, Tin Decorating Company.
No. 726—Chas. L. Rohde, wharf, Clinton street.
No. 732—Canton Company, shed, Aliceanna street.
No. 739—Ober's Wharf, fenders and flooring.

No. 744—McIntyre-Henderson's Wharf.
No. 745—Aug. Wienhold, piers, Spring Gardens
No. 746—Southern Dryer Company, pier, Curtis Creek.
No. 748—Pennsylvania R. R., head, foot of Bond street.
No. 751—McLean Company, extension, Pier 3 Spring Gardens.
No. 754—Benj. Glenn, repairs, piers, Wagner Point.
No. 756—B. C. & A., extension, Piers 3 to 7½ Light street.
No. 779—Crook-Kries Company, pipe through bulkhead.
No. 781—Andrew Miller, bulkhead seawall.
No. 784—Johns Hopkins Estate, repairs, Clinton street.
No. 790—Benj. Glenn, fenders, piles, Pier 1 Pratt street.
No. 791—Andrew Miller, bulkhead, Colgate Creek.
No. 792—Mann Yacht Building Company, extension, Ferry Bar.
No. 795—Nilson Yacht Building Company, extension, Ferry Bar.
No. 800—Benj. Glenn, bulkhead, Wagners Point.
No. 801—Chesapeake Contracting Company, dam, foot of Bayard street.
No. 802—McLean Contracting Company, extension, Pier 5 B. & O.
No. 805—Arundel Sand & Gravel Company, bulkhead, Fairfield.
No. 806—Canton Company, piers, Canton.
No. 808—McLean Contracting Company, bulkhead, foot of Haubert street, Spring Gardens.
No. 809—J. S. Young, fenders, piles, foot of Chesapeake street.
No. 814—Canton Company, pier, foot of Leakin street.
No. 815—Baltimore Pulverizing Company, shell conveyors, Clinton street.
No. 818—Benj. Glenn, repairs trestle, Gas Company, Bear Creek.

I also made a general inspection of all wharf property, including Light Street Bridge, and superintended repairs from time to time. I also made a thorough examination of all wharf property for which permits were granted by the Board, with a view of seeing that the work on same was properly carried out in accordance with the provisions of said permit.

I also made a daily inspection of all packing-houses during the season to see that they placed the calcium hypochlorite around their drains and property as was ordered by the Harbor Engineer.

Respectfully submitted,

William A. McDonough,
Supervisor of Wharves.

Canneries Inspections.

During the canning season daily inspections were made of the different canneries to see that proper precautions were taken to prevent the pollution of the harbor from the offals of these factories, and no doubt the fair condition of the harbor was somewhat brought about by the precautions taken and the treatment given.

Light Street Bridge.

As so much has been said in reference to Light Street Bridge, there is very little to add, unless it be to state that the conditions of the Light Street Bridge are not improving, but are getting worse year by year. This Department is using every possible method to keep the cost of maintenance at as low a figure as the safety will permit, in the hope and expectation that it will be but a short time before the present bridge is done away with and a new bridge constructed.

The following repairs were made:

1500 linear feet of new top and bottom flooring.
48 12x12 inch caps renewed.
75 10x10 inch caps renewed.
273 posts of frame bents renewed.
321 cleats replaced.
852 linear feet of footway renewed, including 146 new joists.
448 linear feet of fender on footway renewed.
605 linear feet of hand rail renewed.
404 linear feet of fender on roadway renewed.
18 posts of hand rail renewed.
440 linear feet of 8x10 inch fender on draw renewed.
2 10x14 inch caps on draw renewed.
592 linear feet of fender on south side of draw span renewed.
2 new gear wheels placed in engine.
Engines and boilers generally overhauled.

The following tables will show the traffic over and through the bridge:

LIGHT STREET BRIDGE TRAFFIC.

	Material.	No.	Tons.
DISTRIBUTION OF LOADED SCOWS PASSING THROUGH DRAW.	Coal	421	89,207
	Brick	75	2,145
	Fertilizer	275	23,985

TRAVEL OVER BRIDGE.

Single teams	107,228
Double teams	113,620
Street cars	159,007
Funerals	478

Draw was opened 7,391 times.

REMOVAL OF ASHES.

As provided for by law, there is anchored off Anchorage No. 1 a scow, upon which are deposited ashes of the tugboats plying in the harbor, to prevent the same from being thrown in the ship channels.

All of these ashes were deposited behind private bulkheads, free of cost to the city. The condition of the present scow was such that to repair it would cost perhaps equally as much as a new scow, in consequence of which the Department requested of the Board of Estimates an appropriation sufficient to cover the cost of a new scow, and the same will be placed in commission as soon as completed.

REMOVAL OF FLOATING MATTER.

For the purpose of keeping the harbor free of floating matter, there are, during the months of June, July, August and September, one superintendent and six boatmen appointed by the Department, and the material removed may be seen from the table below:

REMOVAL OF FLOATING MATTER.

FLOATING MATTER.	Boat No. 1.	Boat No. 2.	Boat No. 3.	Boat No. 4.	Total.
Cats	60	70	70	58	258
Dogs	71	63	72	51	257
Rats	129	126	139	87	481
Fish	44	50	54	30	178
Meat (lbs.)	111	114	603	93	921

Logs	59	85	106	58	308
Watermelon rinds (loads)	43	20	.....	17	80

OFFICE WORK—SURVEYS, ETC.

Pratt Street Bridge—This Department furnished engineering supervision and inspection for the construction of this bridge, which was completed April 5, 1913. In addition, data was compiled, pertaining to the time consumed by the Contractor (D. V. Ault & Co.) in the various stages of construction, and several drawings were made in connection with the above work.

Recreation Pier—Construction work was started on January 1, 1913. Base line and other surveys were made and thirty drawings in connection with the construction work were prepared. Engineering supervision and inspection were furnished by the Department. The inspection of this work, particularly that of the concrete piles, was very carefully made and insured high-grade construction. The construction of the sub-structure of the pier and the grading and paving of the adjacent streets, which comprises the entire work let out under contract by the Harbor Board, was completed December 31, 1913. A survey of the property at the southwest corner of Thames street and Broadway was made and a condemnation plat prepared with the idea of the city acquiring this property to widen the street at this point.

Key Highway—The Department furnished inspection for the removal of buildings and the filling up of old cellars and holes on the line of the first section of this highway. Drawings showing the present and proposed grades for the second section of Key Highway and proposed change of United Railway tracks on Light street (first section of Key Highway) were prepared and sent to the City Engineer's Department.

All plans and specifications for the paving of the Key Highway were prepared by this Department and sent to the City Solicitor for his approval and by him referred to the City Engineer's Department, as the work of construction, by authority of the Board of Estimates, was turned over to that Department.

SURVEYS.

Topographic survey of territory from foot of Hanover street to Ferry Bar.

Topographic survey of north shore line of Middle Branch of Patapsco River, from Fort McHenry to Ferry Bar.

Hydrographic resurvey of portion of Middle Branch of Patapsco River, covering the area from Light Street Bridge to a line 3,800 feet east of same.

Hydrographic survey of channel leading into Westport Paving Brick Company in Spring Gardens.

Hydrographic survey of Curtis Creek, from County Bridge to mouth of Curtis Bay, with the exception of a strip of 500 feet wide, between Stone House Cove and Wagner's Point.

Survey of the location of the sunken Steamship "Alum Chine," blown up by dynamite at anchorage off Quarantine grounds.

Survey of various new industrial improvements along Patapsco River and tributaries, for the purpose of keeping map of Patapsco River up to date.

Several miscellaneous surveys in connection with various proposed improvements around the harbor.

PLANS, ESTIMATES AND DESIGNS.

Map of upper harbor, showing municipal piers.

Plat showing proposed changes in pierhead line in Patapsco River, between Lazaretto Light House and Point Breeze.

Plat showing proposed changes in pierhead line in Southwest Branch of Patapsco River.

Plat of Baltimore Harbor, showing proposed waterfront improvements (for book of laws relating to Baltimore Harbor).

Compiled information in regard to distances and areas in Baltimore Harbor and Chesapeake Bay (for book of laws relating to Baltimore Harbor).

Investigations in regard to proposed waterfront improvements for Baltimore Harbor in Southwest Branch and Main Branch, Patapsco River.

Plotted soundings in Patapsco River, from Lazaretto to Fort Carroll, Middle Branch and Curtis Bay.

Map showing location of sunken Steamship "Alum Chine," blown up by dynamite off Quarantine grounds.

Plotted buoys in Curtis Bay and Fort McHenry channels.

Investigations, estimates and maps in connection with the proposed 600 feet wide 35-foot channel in Southwest Branch, Patapsco River, from Fort McHenry to Light Street Bridge.

Complete record of tides for the year.

Compiled previous tide records for determination of maximum and minimum tides.

Plans and estimates for repairs to municipal garbage platform on Centre Pier, Back Basin.

Plans and estimates for repairs to municipal garbage platform, near the foot of Bayard street, Spring Gardens.

Preliminary estimate of cost of new city pier, foot of Calvert street.

Plans of Patapsco River, from Spring Gardens to Fort Carroll, scale 1″=1,000′.

Data relating to the amount of lumber stored during the year upon the municipal wharves and docks.

Map of Patapsco River, from Fort McHenry to Sparrows Point, scale 1″=500′, is in final stages of completion.

Work has been started on a map of the Patapsco River and tributaries, from Sparrows Point to the mouth of the river.

In addition to the above, data relating to the harbor and the tides has been furnished to various corporations and individuals.

Twenty-five miscellaneous drawings have also been prepared.

RECORD OF TIDES.

REFERENCE PLANE—M. L. T. HARBOR BOARD DATUM.

YEAR.	HIGH TIDES.		LOW TIDES.		MAXIMUM TIDE.

NEW WORK.

Key Highway—Plans showing the location of the second section of the Key Highway, from Montgomery street to the west side of Lawrence street, were approved by the Harbor Board and submitted to the Board of Estimates. Under authority of the Board of Estimates, this plan was submitted to the Commissioners for Opening Streets, plat prepared and the property is now being purchased by the Commissioners for Opening Streets. All profiles, etc., in connection with the construction work have been prepared by this Department and submitted to the City Engineer, as by authority of the Board of Estimates, this construction work has been turned over to that Department.

Plans were also prepared by this Department locating the third section of the Key Highway, including an extension bordering on the Middle Branch of the Patapsco River, from Fort McHenry to Ferry Bar. It is the opinion of the Harbor Board that if this street is to be constructed, that the city acquire all riparian rights bordering on the proposed street, or where there are no existing piers, etc., and that the same be held by the city and improved when there are demands that would justify the necessary expenditure of money for the construction of piers.

This Department has prepared an elaborate study for the development of Spring Gardens, from the foot of Howard street to Ferry Bar, which is more fully described in the annual report of the Harbor Engineer to the members of the Harbor Board.

Commercial and Recreation Pier—The contract for the construction of the substructure was awarded to William L. Miller and Luke D. Mullen, of Boston, on December 12, 1912, they being the lowest bidder, at an estimated cost of $210,000. The work was completed the latter part of December, 1913, at a cost less the paving on pier of $192,244.37.

The substructure is entirely of reinforced concrete and steel, and the pier was designed, as its name would imply, the lower deck for commercial purposes and the upper deck for recreation.

As the harbor widens out at this point, the pier was designed to allow a depth of water in docks of 35 feet when needed. At this time the depth is 27 feet, being ample for those vessels which will use it at the present time.

The docks are 190 feet wide with bulkheads on either side. While provision has been made for a depth of water of 35 feet, or a depth in itself sufficient to take care of transatlantic liners, the pier was not designed for that specific purpose, but it was deemed advisable to have at command a pier which could be turned over, were there any demand for space by the larger type vessels.

The total length of waterfront at the disposal of the city was 530 feet and a dock of 190 feet should provide an ample width, as it is hardly possible that any large vessels will berth along the bulkheads. The purpose of the bulkheads is to turn them over to the use of lighters, transferring cargoes from the opposite side of the harbor, for local distribution. In consequence of which there will be no two vessels abreast of each other in the slips.

The pier is 150 feet wide by 500 feet, and for one-half its length is a solid type similar to Piers 4, 5 and 6.

The driveway for the depth of buildings is 35 feet, widening out to 58 feet in width and paved with sheet asphalt. The outer half is paved for its full width. Later, after the fill has settled behind sheet piling, the balance of the pier will be paved.

The bulkhead is similar to Piers 4, 5 and 6, except that the bottom of the marginal beam is at an elevation of one foot one inch above mean high tide, and the beam and sheet piling are of larger section, to take care of additional loads, due to the greater depth of water.

Two reinforced concrete piles, every 20 feet, centre to centre, 15 inches by 15 inches in section, were substituted for the cylinders.

Another noticeable difference may be seen in the sheet piling. The piling in Piers 4, 5 and 6 was 12-inch by 18-inch, 27 feet long, not interlacing or tongue and grooved and carried no jet pipe.

Here the piles are 19-inch by 24-inch, 30 to 45 feet long, with a 5 by 2½ inch tongue and groove, 2-inch jet pipe, and weighing from eight to ten tons.

Great difficulty was experienced in driving these piles. The character of bottom encountered was sand, mud and clay to 25 feet, then a stratum of sand and large coarse gravel. Fully 80 per cent. of all piles driven met with the above conditions and drove very hard; the remaining piles missed the stratum of kaolin and tended to dip and leave the work near the outer end.

Three jets were used, one attached to the 2-inch pipe in pile, and two others used on the outside; a 7,000-pound hammer was placed on top and the pile churned by raising and lowering in the leads of the machine. It was necessary to drive them to a penetration sufficient to insure a toe-hold.

This condition of kaolin, over coarse gravel, caused a blanketed condition, making the action of the jets almost useless; the jet forcing its way through this hard, pasty substance would lose its effectiveness out through the coarse gravel, and the condition looked for in all jetting work, that is the dislodging of material and boiling up at the surface, never appeared. Other methods were tried, but with little or no success; the work required a great deal of patience, it taking in some cases four hours to churn a pile. Where the condition of the bottom changed, a pile was driven in from five to ten minutes.

The weight of these piles, and the fact that there was not room at the site of pier to make and store them until seasoned, required that they be built elsewhere and brought to the work as needed. A site was secured and a Gantry crane constructed, the forms were set and the first piles cast. The mixer was so arranged as to dump into a bottom dump bucket, which in turn rolled on an "I" beam and could be drawn back and forth the length of the pile form. The crane would then advance to the next form and so continue until all piles for which forms had been constructed cast. In about two days the forms were removed from the piles first cast and carried ahead by the crane. After piles were a week old they were allowed to be carried on quarter points by the crane to a storage pile, where they remained four weeks until seasoned. They were then picked up on quarter points by a floating derrick, put on deck and taken to the work. There were a total of 1,600 piles used.

In the open work the bents are 10 feet centre to centre, and piles 11 feet centre to centre.

The bottom of the floor beams in the open work are a minimum of one foot one inch above mean high tide. It may be noted that the concrete was kept above water as much as possible.

The fender system consists of white oak piles, 10 feet on centre along the face of pier, blocked out with oak blocks, the piles being banded to the wall with wrought-iron straps and made fast by one-inch Richmond screw anchor bolts.

Piles are capped with twelve by twelve timbers and two feet nine inches above the water line is a runner of six by ten timber. In addition to that described, will be a floating fender of large juniper or white pine spars, chained to piles of the fender system.

The contract for the superstructure was awarded to the Singer-Pentz Company, the lowest bidders, on September 27, 1913; the estimated cost of the work being $242,000; the work to be completed March 1, 1914.

At the head of the pier is a building 145 by 86 feet, back of which the deck will be covered for a distance of 312 feet with head room of 22 feet.

The front portion of the building on Thames street will be a two-story structure, 140 feet in width by 90 feet in depth. This building will have a first floor, mezzanine and second floor.

On the first floor are located on either side of the main driveway offices in connection with the Commercial Pier, Harbor Master, freight offices, etc., together with toilet-rooms, boiler-room, fuelroom, etc.

On the mezzanine, additional office space is provided, and on the second floor will be the large assembly hall, with foyer and ante-rooms, etc., for the use of the public. This large assembly hall, 40 feet in width and 84 feet in length, opens on to the spacious stairways and runways leading to the floor above. At the end of the recreation deck will be two large additional stairways for the public, leading to the main deck of the pier.

The main front on Thames street is designed in tapestry brick with granite and limestone trimmings. The central feature is emphasized by a colonnade in the second story, opening off assembly hall and crowning the central archway of 50 feet span.

To the right and left are the public entrances to the recreation pier above, which the central archway leads to the commercial pier on the main floor.

The building is entirely of fireproof construction, of steel frame with brick walls and stone and granite trimmings. While simple in design, it has a decorative effect in its mass and proportions and will be a distinctive landmark among the public buildings of Baltimore.

The commercial end of the pier is frankly expressed in the treatment of the doorways, and this will be further enhanced by the color scheme in the painting of the wood and steel.

There is an open deck at the end of the pier of 95 feet by 150 feet. The covered deck, used for commercial purposes, will have a length of 312 feet by depth of 135 feet, and will be used as a municipal warehouse. Above this deck will be the promenade deck of the Recreation Pier, provided with awnings and shelters somewhat in the manner of the great steel piers at Atlantic City.

The bays are 20-foot centres, and between columns is a two-section Ogden type cargo door, 18 feet wide, 21½ feet high; the lower section is 8 feet and upper leaf 13 feet 6 inches. The columns are detailed to allow the chains and counter weights to slide vertically.

The lower section opens vertically and together with the upper section is swung inward and upward to a horizontal position, giving a clearance of 21½ by 18 feet. By means of gear wheels the doors are easily operated by a hand-chain.

The doors are of spruce and white pine, covered outside with No. 22 galvanized iron. Each door is provided with 80 square feet of one-quarter ribbed wire glass.

Mr. Theodore Wells Pietsch was the architect for the building.

The Harbor Board is better satisfied now than ever before that the City of Baltimore was wise in adopting a form of construction impervious to the teredo, and at the same time one which is cheaper and more permanent than a timber construction, with a large saving in maintenance. As has been stated, the teredo some years ago was found to exist about four miles down the river, but much to the surprise of this Board, when the digging out of the slips for the Recreation and Commercial Pier was under way, a great quantity of timber was removed from old piers, built perhaps thirty or forty years ago, which were riddled by the teredo. The conclusion drawn, was that the teredo, before the harbor became polluted, must have been quite active, and naturally, as the sewage is diverted from the harbor, his activities will again begin. There is no possibility that timber originally in this condition could have been placed in the work. It was quite noticeable in the timber ties that only that part of the timber exposed to the water had been touched by the teredo, the protected part being almost as sound as when first used. Since the sewage has been turned from the harbor, there has been a great increase in the sea life. Fish, crabs, etc., had not been seen or heard of in the upper harbor for many years, until about two years ago, when they became quite numerous. Tugboat owners and operators are complaining of the great increased growth of barnacles on the bottom of their vessels, all of which points to the fact that the water of the harbor will become as equally attractive to the teredo.

Proposed Improvements.

The proposed improvements and recommendations have been definitely outlined in the report of the Harbor Engineer to the members of this Board, which is most heartily endorsed by them and to which you are respectfully referred.

Respectfully submitted,

Oscar F. Lackey,
William D. Sanner,
James S. Armiger,
William G. Knapp,
Marcellus H. Goodrich,
Harbor Board.

BALTIMORE HARBOR

The Harbor of Baltimore is 170 miles from the sea and is well sheltered, being what is called a landlocked harbor with a mean tidal flow of about a foot and a half.

Many desirable tide water sites, with railroad connections, are available along nearby shores having high ground in the rear and bold water in front on both sides of a 35-feet deep channel in many places less than a mile therefrom.

Prior to the great fire of 1904 the city owned but little wharf property of importance. The fire made it possible to acquire all of the Burnt District fronting on the harbor (about 4,000 lineal feet), and under the Six Million Loan the city purchased the property and removed all buildings, streets, etc., and laid out a system of public wharves and docks south from Pratt street which has been made 120 feet wide, with many streets running into same, also widened and improved. The Public Wharves and Docks situated in the upper harbor are intended for the coastwise and bay trade. The Commercial (Recreation) Pier can be made available for transatlantic steamships with a depth alongside up to 35 feet.

Piers 1, 2 and 3 have been leased at 36 cents per square foot.

Pier 4 is at the foot of Market Place which has been widened to 150 feet. Along Market Place the city has erected three handsome comodious buildings, a Retail Market, a Fish Market and a Wholesale Market with a Comfort Station nearby, and all within a stone's throw of Pier 4, set apart for the use of the market boats.

For cost of piers see table in Harbor Board Report, 1911, page 30.

LOCATION OF PUBLIC WHARVES AND DOCKS.

	Average Length.	Total Area.
Municipal Pier, near foot Calvert street..	64 ft.	512 sq. ft.
Pier 1, foot South street	551 ft.	82,108 sq. ft.
Pier 2, foot Commerce street............	638 ft.	127,163 sq. ft.
Pier 3, foot Gay street....................	772 ft.	153,362 sq. ft.
Pier 4, foot Frederick street..............	927 ft.	178,875 sq. ft.
Pier 5, foot Market Place................	1,150 ft.	245,574 sq. ft.
Pier 6, foot West Falls avenue..........	1,450 ft.	218,797 sq. ft.
Pier 7, foot President street..............	400 ft.	40,000 sq. ft.
Pier 8, foot Albemarle street............	500 ft.	65,000 sq. ft.
Recreation Pier, foot Broadway.........	500 ft.	75,000 sq. ft.

Docks alongside Commercial Pier are 190 feet wide, 27 feet deep (can be made 35 feet deep); the other docks are 150 feet wide, 24 feet deep.

The channel from the ocean to Baltimore is 35 feet deep and 600 feet wide, Baltimore to near Sandy Point, and thence to the sea 1,000 feet wide.

The government anchorage basin opposite Quarantine station (near Fort Carroll) is 3,500 feet long, 600 feet wide, 35 feet deep.

There are no port dues.

Baltimore Steam Packet Company.

WATERFRONT TERMINALS.

Canton Company and Canton Railroad.

Canton Company owns large waterfront, partly improved, and is connected by Canton Railroad, eight miles long, with the Baltimore and Ohio Railroad, the Pennsylvania Railroad and the Western Maryland Railway.

Has one pier 200 feet long by 100 feet wide, with warehouse 200 feet by 80 feet and small warehouse in rear.

Has under construction one fireproof pier 800 feet long by 150 feet wide with iron shed and, adjacent to a dock 150 feet wide by 1,200 feet long, will be built of reinforced concrete, with sprinkler system, a six-story warehouse 200 feet long by 80 feet wide.

Has constructed another dock 1,400 feet long by 200 feet wide and is filling in behind the bulkheads.

Has under consideration a new pier 1,000 feet long by 150 feet wide.

Has new railroad yard with two miles of track and a ferry slip for transfer of cars on barges.

BALTIMORE AND OHIO RAILROAD COMPANY.

The Locust Point terminal of this Company is the largest on the Atlantic Seaboard. There millions of tons of freight are imported and exported annually and thousands of immigrants are landed each year. Locust Point covers a mile of waterfront and is situated directly behind historic Fort McHenry. This terminal is well appointed, with a system of spacious docks, large freight and coal piers and mammoth grain elevators with capacity of 2,500,000 bushels, and it is equipped with modern apparatus for fire protection with a high-pressure pipe line system supplied by pumps having a capacity of 4,750 gallons a minute.

Has 11 piers—nine covered and two open—with an aggregate floor space of about 857,000 square feet. Pier 8 is the largest and is 980 feet long and 160 feet wide with a two-story shed, 941 feet by 138 feet, of 259,000 square feet of floor area. It is equipped with the Telpherage system operated by electricity on a series of overhead tracks (1½ miles) on which 20 carriers handle freight about the piers (10 of 2-ton and 10 of 4-ton capacity). Pier 9, the next largest, is 855 feet long by 160 feet wide, with a two-story shed, 800 feet by 138 feet, of 220,800 square feet of floor area. The second floor is used as an immigrant station and a section of the pier is used as a bonded warehouse for dutiable imports.

The terminal was established in 1858, when the famous Baltimore clippers were monarchs of the sea. In 1865 the railroad company purchased four steamers from the government and established a transatlantic line to European ports. In 1868 the North German Lloyd established service between Locust Point and Bremen. In 1913 eight lines make regular sailings from the terminal and 1,800 workmen are employed there.

At Curtis Bay the railroad company has the largest and one of the best equipped coal terminals on the Atlantic Coast.

The world's record for loading a vessel with a cargo of coal is held by the Curtis Bay terminal. On November 23, 1912, the Collier "Newton" was loaded in three hours and 45 minutes, 7,500 tons. In 1913 the hard and soft coal handled at Curtis Bay and Locust Point amounted to 3,191,421 tons. At Curtis Bay this Company also has a one-story covered pier 100 feet by 820 feet of 52,560 square feet capacity (150 cars), for export and import freight other than coal.

PENNSYLVANIA RAILROAD COMPANY.

(Philadelphia, Baltimore and Washington Railroad Company and Northern Central Railway Company.)

Handles a vast traffic over the following piers, with width of docks between of from 40 to 180 feet (all new docks to be 200 feet wide). The maximum depth of docks being 32 feet.

Pier 1½ (Clinton Street)—160 feet 6 inches by 26 feet 3 inches. Open pier with two tracks and capacity of eight cars. For traffic by lighters to and from wharves in harbor.

Pier 2 (Clinton Street)—500 feet by 70 feet. Covered pier with two tracks and storage capacity of 30 cars. For inbound and outbound traffic of bay and coastwise steamers, mainly by lighters.

Pier 3 (Clinton Street)—929 feet 4 inches by 121 feet Covered pier with two tracks and storage capacity of 200 cars. For storage and handling of export and import traffic.

Pier 4 (Clinton Street)—932 feet by 100 feet. Covered pier with two tracks and storage capacity of 175 cars. For coastwise and export traffic.

Pier 5 (Clinton Street)—500 feet by 35 feet. Open pier with three tracks and capacity of 36 cars. For traffic to and from steamships docking at other terminals. Poles, piling and railroad ties also handled at this point.

Pier 6 (Clinton Street)—935 feet two inches by 120 feet. Covered pier with two tracks and storage capacity of 200 cars. For the storage and handling of export and import traffic.

Pier 7 (Clinton Street)—50 feet wide by 780 feet on north side and 932 feet on south side. Open pier with four tracks and capacity of 96 cars. For export and import traffic to and from steamships docking at other terminals and also for river, bay and coastwise traffic and for handling phosphate rock, lumber, etc.

Washington Shed (Clinton Street)—210 feet 6 inches by 24 feet. With one track alongside and capacity of six cars and storage capacity of five cars. For less than carload traffic from local concerns by wagon.

Storage Warehouse (Clinton Street)—135 feet by 83 feet. For handling traffic to and from Bay Line points, received from and delivered to lighters.

Bonded Warehouse (Clinton Street)—270 feet by 42 feet. For traffic in bond.

Coal Pier (Clinton Street)—780 feet 10 inches by 47 feet. This is a high pier with two tracks and capacity of 60 cars for the delivery of coal and coke to vessels and bunker coal to tugboats and to lighters.

Ore Pier (Lower Canton)—1,108 feet by 62 feet. Open pier with four tracks and capacity of 110 cars. For the handling of full cargoes of rough freight—steel rails, structural iron, etc.—and for inbound cargoes of foreign ores, ferro-manganese, spiegeleisen, etc.

Elevator No. 1 (Clinton Street)—498 feet by 100 feet. Capacity 500,000 bushels of grain.

Elevator No. 3 (Lower Canton)—603 feet by 122 feet 7 inches. Capacity 1,000,000 bushels; connected with this elevator are concrete storage bins with an additional capacity of 1,000,000 bushels.

Pier 3 (Boston Street)—398 feet by 50 feet. With three tracks and capacity of 30 cars. For anthracite coal.

Pier 4 (Boston Street)—396 feet by 100 feet. With five tracks and capacity of 55 cars. For anthracite coal.

Barge Slip (Boston Street)—For transfer of loaded cars.

Jackson's Wharf (Foot of Bond Street)—For handling local freight and interstate traffic.

WESTERN MARYLAND RAILWAY COMPANY.

Has every facility for prompt handling of shipments at Port Covington terminal, with every modern device for unloading coal from cars and loading same on vessels.

Has three large piers—one coal pier 1,295 feet long; one covered pier 836 feet long by 120 feet wide; one open pier 830 feet long by 60 feet wide, with depth alongside of 32 feet, has four tracks and is equipped with locomotive cranes.

Has pontoon bridges for transferring cars on barges; and has storage capacity at Port Covington for 2,000 freight cars with over 60 tracks in service.

Respectfully submitted,

Approved: JAMES H. IRVIN, *Clerk.*

O. F. LACKEY, *Harbor Engineer.*

HARBOR ENGINEER'S REPORT.

BALTIMORE, January, 1914.

To the Members of the Harbor Board.

GENTLEMEN—A plan for the best development of Baltimore's port, like that of any other port, depends first, on the present needs, and second, on what might reasonably be considered the immediate and more future needs.

Baltimore has, by its recent construction of piers, taken care of the immediate needs, but no definite provision has been made for the future. You cannot plan a harbor development and successfully carry it out, unless you know, or have every reason to believe, the purpose for which piers are to be used. I mean by this, it should be known whether the piers are to be for local, coastwise, or foreign trade.

It would be poor policy, and result disastrously, for the city to lay out piers to amply provide for local trade, and find they are needed for foreign trade, and it would result in a large loss of money to construct piers for foreign trade to take care of the smaller vessels engaged in bay or coastwise trade. Likewise, the class of cargo enters largely into the question of port development.

A coal pier would not do for grain or general merchandise, nor vice versa, so we must select those parts of the harbor best adaptable to developments to meet the various requirements of the shipping interests. To do this, requires that the city own and control her entire waterfront, and not take a dozen bites out of the same cherry. To continue as Baltimore has started will result in the sacrifice of our waterfront to immediate needs and leave us nothing for the future.

The Fifty Million Loan.

In 1910, after mature consideration, and viewing what great preparations the Pacific and Atlantic ports had under way, the Harbor Board of Baltimore felt justified in recommending the passage of a fifty million loan, providing for greater public wharves and docks, in order to be ready quickly to utilize allotments of said loan to construct modern wharves with wide and deep docks alongside when authorized to do so by vote of the people.

The Legislature, in its wisdom, cut down this loan to five million, but the Harbor Board still feels that time will justify its action in recommending the passage of the fifty million loan.

Had this recommendation of the Harbor Board been approved, it would have given a working capital large enough, not only to take care of the immediate needs of the shippers, but would have further enabled the city to buy unimproved waterfront property, construct bulkheads and reclaim large areas of land, admirably located for manufacturing and industrial purposes. When all is told, it is the manufacturing industries of a city that make the port. The bringing in of the raw material and taking out of the manufactured article not alone increases the activity of the port, but with excellent facilities, such as the city should provide, the backbone of the community is strengthened by additional manufacturing and industrial plants.

In addition to knowing the trade conditions and the cargo to be handled, it is absolutely essential to have determined a fixed policy. Does the city propose to take over its waterfront, or continue the present policy of sticking a pier here and there at irregular intervals to meet the immediate demands?

It would be poor business policy, with a capital of three million ($3,000,000) dollars to undertake to finance a fifty million ($50,000,000) dollar improvement. If three million ($3,000,000) dollars is all that is available, or likely to become available for harbor improvements, it can much better be spent, as has been the custom of the city, on the construction of one or two piers, rather than to use it in connection with work that would require a much larger sum and have virtually nothing to show when the appropriation was exhausted. If the harbor is to be considered as a whole, then a definite fixed policy should be adopted, after assurance has been given that enough money will be appropriated from time to time to complete the improvement.

Little or nothing can be done now with the upper harbor, except at an almost prohibitive cost. There fortunately remains miles of the most desirable waterfront, both on the Middle and Main Branches of the Patapsco River, that are subject to treatment, and which will amply provide for all future needs.

Harbor Organization.

In reference to the administration of the affairs of the harbor of Baltimore, I feel that the present organization is equal to that of most ports and superior to that of others. It might be wise to increase the membership to seven, by adding a representative from Anne Arundel County, and one from Baltimore County, being the two counties bordering on the Patapsco River. These two additional members to be appointed by the Governor of the State at the same time as the members of the Board are now appointed by the Mayor, and to serve four years; the Board to remain a city Board, subject to the ordinances of the Mayor and City Council of Baltimore, as now provided.

Increasing the present Board, by adding two members as representatives of the State, with the idea that such an addition will help the city to secure State aid from the Legislature for harbor improvements, would possibly create a rivalry between the city, State and counties, which at this time does not exist.

When port development is under consideration there should be no issue between the city and State. The port should include the waters of the Patapsco River and its tributaries and a successful development requires that it be treated as a whole and be improved, as demand arises, regardless of whether such improvements are within or without the city limits.

As an example of what could and likely would be the results of an increase in the Board, as above mentioned, when the majority of the members sought to secure State aid for improvements lying in Anne Arundel County, some exception might be taken by the representative from Baltimore County, or vice versa, and instead of being a help toward securing State aid, they might, on the other hand, work to defeat a measure which would add to one county and not to the other; it is possible that city improvements would be looked at in the same way. In fact this rivalry would not be confined to the members of the Board, but would crop up among the Legislators representing these counties. Of course this rivalry could not exist were the counties not represented on the Board, but it is hardly as likely, for there could be no criticism of the inactivity on the part of any member for not working for the direct interest of the county he represents, at the sacrifice and loss to the port.

The City of Baltimore, since the fire of 1904, has spent for property and the actual construction of its present pier system, five million nine hundred and eighty-seven thousand ($5,987,-000) dollars, eight hundred thousand ($800,000) dollars of which is for the Commercial and Recreation Pier at the foot of Broadway, and not yet completed. This does not include maintenance, Pratt Street Bridge, nor the Key Highway, but does include paving on piers, widening and paving of Broadway, widening and paving of Thames street, between Broadway and Ann street, and the widening and paving of Ann street, from Thames street south to the waterfront. The city is receiving on the investment about one hundred and seventy thousand ($170,000) dollars, which there is every reason to suppose will be increased by at least thirty thousand ($30,000) dollars in 1914. To this should be added any revenue that may be collected from the pier at the foot of Broadway. Assuming this for the first year at fifteen thousand ($15,000) dollars, the total collections will be two hundred and fifteen thousand ($215,000) dollars, which, capitalized at 3½ per cent., is six million one hundred and forty-two thousand eight hundred and sixty ($6,142,860) dollars.

This revenue should increase yearly and result finally in a net profit to the city, or in an amount sufficient to pay the interest on bonds and provide a sinking fund for an additional loan or bond issue for new improvements.

It is only right and fair, as the growth of the State depends largely on the growth of the port of Baltimore, that the city should be given State aid in connection with its waterfront improvements. To bring about this end, I do not feel that any part of the harbor should be turned over to State control, nor do I see any necessity for the appointing of a special commission to provide for its future development. I believe that State aid can be brought about just as readily under the present organization as it could under State control.

The deveolpment of the port of Baltimore since 1904 has been made possible by bond issues, city bonds bearing 3½ and 4 per cent. interest being sold subject to the condition that the interest and sinking fund be provided for in the annual Ordinance of Estimates, so that any Legislature placing the present Board under State control would not relieve the city of its present obligations. In either event, whether bonds are State or city bonds, legislative authority must first be had, and I am of the opinion that it would be easier to secure the passage of an Act authorizing the sale of city bonds, the said Act to provide that the State will add to its tax rate an amount sufficient to take care of a proportional part of the interest and sinking fund, the balance to be taken care of by the city, than it would be did the Act provide that all of the interest and sinking fund must be taken care of by the State.

It would be a very difficult matter to impress upon the members of the Legislature the importance of improvements in the port of Baltimore, when they know that any money appropriated for such developments would have to be paid for by the counties they represent, which are only indirectly interested and benefited.

The work in connection with the Harbor Board is entirely separate and distinct from the work of the other engineering departments of the city government, in consequence of which there is no occasion for the duplication of work.

There is nothing as important to the welfare of the City of Baltimore as its port.

The study of its development is one entirely distinct from that of other departments, and the field is very broad and requires undivided attention, thought and consideration, and should be set apart and not incorporated with the other departments under one head.

Special Commission.

The city would certainly not consider turning over its present waterfront holdings, costing nearly six million ($6,000,000) dollars, unless the State reimbursed the city, which the State would most likely decline to do, in consequence of which the present piers would have to remain under city control, or a harbor board. If then, under city control, why the need of appointing a special commission for the purpose of considering the future development, either within or without the upper harbor of Baltimore?

I have already stated I do not believe the creating of such a board, or adding to the present one, would have any additional weight or influence in securing State aid for harbor work. Unless the present Board is abolished, it would result in a duplication of work and add to the overhead expenses, with two bodies working at cross purposes, from which no benefits could possibly be derived.

If it is a question of efficiency, either in administration or construction, then again I. see no reason for a special commission, for I say without any egotism that I do not believe a commission could be selected for the purpose of planning any improvements for the port of Baltimore that would be as well qualified to pass upon such matters as the present Harbor Board, one of whose members has been connected with waterfront improvements for eight years, two others for six years and other two for two years.

The waterfront, or harbor of Baltimore, has become vastly important to the taxpayers as a valuable asset, capable of growing to be more valuable in increased revenues as the system of public wharves and docks is enlarged or extended. The work already done and the suggestions made for additional improvements will show how well the Harbor Board has done its duty and how constant has been its effort to add to the importance of the port of Baltimore by timely recommendations often in the face of great opposition, but the Harbor Board feels that the benefits arising out of the recommendations adopted and put into the shape of complete work, strongly serve to call renewed attention to those recommendations deferred to a later date for adoption, as the Board still feels many are so important that they will eventually be adopted.

A summary of the work done and suggestions made by the Harbor Board from 1907 to 1914 will show that an effort was made to lease the public piers on short term leases, further providing when the piers under lease were not occupied by vessels belonging to the lessee that the harbor masters should have the privilege to dock any other vessels and charge the regular rates for wharfage and dockage, the Harbor Board feeling that such a method would very materially increase the effectiveness of the system.

An effort was made to have the City of Baltimore construct and control all buildings on public piers. This recommendation was disapproved, and the Harbor Board endeavored to have the lessees agree upon some uniform plan for the front of their buildings, with the idea of adding to the dignity and appearance of the waterfront.

Plans for the first concrete piers ever constructed in this country, after a hard fight on the part of the Harbor Board, were approved and construction started in April, 1908.

Temporary piers, known as No. 7 and No. 8, were constructed to relieve the congestion caused by the building of the other piers.

The 18-foot channel in the upper harbor was widened and deepened to twenty-four feet and the 24-foot channel widened and deepened to thirty feet.

Recommendation made for nine additional piers, to extend from Jones Falls to Canton.

Prepared plan and estimate for the opening of Pratt street in a straight line, from Concord street to Central avenue.

Recommended a new six million ($6,000,000) dollar loan for the aforesaid improvements.

Recommended that Pratt street be widened, from Concord street to President street, and that the old truss bridge be replaced with a concrete arch bridge, to the full width of Pratt street as widened. Recommendation approved and work completed.

Recommend new ten million ($10,000,000) dollar loan.

Advanced arguments and worked for the municipal ownership of docks along the waterfront.

Recommended further extension of dock system.

Prepared plans, profile and specifications for the construction of a street around the harbor on the south side, including piers, ferry slip, public belt, etc., and acquired the property for the first section.

Prepared plans and specifications for the construction of a Commercial and Recreation Pier at the foot of Broadway; acquired the property; the work to be completed in March, 1914.

Recommended that the harbor masters be placed under the jurisdiction of the Harbor Board.

Arranged traffic regulations for the harbor.

Compiled new harbor laws.

Recommended that the fireboats, iceboats, etc., be stationed at Pier 7.

Recommended that the Marine Hospital bulkhead be constructed, filled in and land reclaimed.

Opposed the dredging of the upper harbor to a depth of thirty feet, and recommended that the money be spent for the deepening of the lower harbor.

Recommended a fifty million ($50,000,000) dollar loan for general improvements of the harbor.

Recommended a one million ($1,000,000) dollar loan, and in reference to loans the work of the Harbor Board did not end with the recommendation, but included all plans, estimates, etc., for the improvements under the loan. The necessity of securing the legislative authority required that this Board impress upon the legislators the importance of such a loan and later required that the people be advised for what purpose the money was to be used.

Plans and estimates were prepared for an elevated road over the Falls, leading to the waterfront.

Plans were prepared for a belt line around the harbor and the construction of such a belt line recommended.

Interstate canals were favored by the Harbor Board, also canals through the city.

Suggestion offered that the city retain all waterfront rights at the Old Marine Hospital.

Tentative plans and recommendations made for new Light Street Bridge.

Arguments made against railroad monoply of piers.

Recommended wider and deeper channels, including plans and estimate.

Important recommendations made as to collections of wharfage on lumber and recommendations again made that the harbor masters be turned over to the Harbor Board.

Harbor laws compiled and published October, 1913.

Studies made for the improvement of the south side upper harbor, west side—Middle Branch, inner harbor of Spring Gardens, Marine Hospital property, and others, all of which required time, thought and study.

In addition to the aforesaid, hydrographic surveys were made and the construction of all harbor work after plans were prepared, supervised by this Department, together with the maintenance and operation of the vessels of the Department and all public wharves, docks, channels and Light Street Bridge.

As I have previously stated, if the city will give this Board the authority to outline some definite fixed policy, and after due consideration, if such a policy is approved by the administration, if the administration will finance such improvements that this Department might recommend, then I say that this Board will be in a position to carry out the developments of this port in a manner to meet the needs of the shipping interests of the present and to amply provide for those of the future in a manner, I do not hesitate to say, superior to that of any other board or special commission that may at this time be appointed, whether it be under State or city control. In making this statement, I mean to imply that this Department has given a thorough study to the needs of this port since they have been employed for that purpose, and in consequence of such must be in closer touch with the requirements of the port than would be a commission who had to devote a great deal of their time in order to accumulate the knowledge that this Board by its work of years have acquired.

A special commission, unless it were a well-paid commission, employed to devote its entire time to port matters, would accomplish little or nothing. To get the right kind of men, they would have to be paid a good salary to compensate them for their work, which again would be an unnecessary burden on the State or city.

What this Board needs is a larger appropriation for research work. We need, primarily, a traffic expert, and possibly, some arrangement could be made with the Chamber of Commerce, whereby we could pay to the Chamber of Commerce a fixed sum annually, they in turn, to let us have the services, from time to time, of their traffic manager, who, because of his long connection with transportation matters and the interest the Chamber has in port matters, would likely be able to serve without conflict of duties.

If a public belt line is to be considered, which has been recommended by this Board for a number of years, then we should have the power to appoint a railroad expert, and no doubt an arrangement could likewise be had with the Chamber of Commerce, or some of the commercial or trade organizations, to secure the services of someone in their employment who knows the local conditions and has had the necessary experience to familiarize him with the needs of the city and the organization of a public belt railroad.

As to the question of whether or not the members of the Harbor Board should receive compensation for their work, after a thorough consideration and discussing this matter fully with some of the best authorities on port administration in the country, I have come to the conclusion that the city can get better results from an unpaid board, other than the President and Chief Engineer, who devotes all his time to the work of the Department.

In the first place, it would be a hard matter to get men well qualified for the position who would be willing to give up their entire time to the affairs of the Department, unless they were well paid. This would have the effect of decreasing the number of the members of the Board, which, in my opinion, is poor policy, as there would be less publicity given to the affairs of the Department, which should be generally known, commented on and open to the general public for their consideration, discussion and criticism. Further, if the pay was small, there would be a wild scramble among an undesirable class who are in no way qualified for the work.

If unpaid, as is the present custom, and giving such time as may be required by the President of the Board, and as their duties might demand, the position is one not sought, but is a distinct honor conferred on the members by the Mayor and one that is and should be filled by widely known and highly respected business men.

Going back to the question of State control, there are some of the leading ports of this country under State control, including New Orleans, San Francisco and Boston. The fact of their being under State control was not necessarily the desire of the respective municipalities, but was due primarily to the fact that the State, realizing its great asset, did not turn over the control of its waterfront to the city.

I know of no instance where a city originally having control of its waterfront has turned it over to the State.

New Orleans is under State control for the reason that the State of Louisiana, for its own protection, builds and maintains the levees to prevent the flooding of the State during the freshet of the Mississippi River.

The waters bordering on the city of San Francisco were always under State control.

Boston, like Baltimore, some years ago owned none of its waterfront and owns but a little today, and in placing the harbor improvements under a State Board, the State of Massachusetts is following out the same plan it has adopted in reference to its parking system, sewerage system, etc., they all being under control of the Commonwealth of Massachusetts.

PUBLIC BELT LINE.

There is nothing more essential to the welfare of a port than cheap switching charges and an interchanging of freight. This can best be brought about by a public belt railroad connecting with all trunk lines entering the city and by means of spur lines with the commercial and industrial houses in the business section.

Money is scarce and the railroads cannot afford to spend large sums at this time to improve their terminals. If a new transatlantic line desired to make Baltimore a port of call, there would be no place for their steamers to dock, as unquestionably their docking at the present terminals would interfere materially with the regular liners now using the railroad piers.

If the City of Baltimore constructed a pier suitable to the needs of the larger vessels, how would the city possibly hope to receive any direct revenue for its use in face of the fact that the railroad companies make no charge for the use of their terminals, their profits coming out of the freight handled. If the city charged the steamship company for the use of the pier it can readily be seen that they would have to operate under a heavy handicap and would not be open to fair competition.

With a public belt, in addition to the flat rate charge, an additional charge could be added for each car loaded or unloaded on a public pier, this extra charge to be absorbed by the railroad company delivering or receiving the car, which would be in the nature of a wharfage or dockage charge for the use of the city's terminal by the railroad companies. In this way, the city would derive a revenue and the railroad companies would not have to make a large layout of money, which at this time they cannot afford to do, and Baltimore is suffering the consequences.

The question of a public belt for Baltimore is not a difficult one to solve with a little co-operation on the part of the railroads.

The railroad tracks now in the bed of the public streets could be incorporated in the belt line and a reduction in the flat rate made to the railroads in proportion to the number of feet of track taken over for belt line purposes; an estimate of the cost of trackage to be first made and after the reduction in the flat rate charge equals the original estimated cost, the track to become the property of the public belt and the refund to cease.

The present switching charges in Baltimore are from four to eleven cents per hundred pounds, or on a sixty thousand (60,000) pound car a minimum of twenty-four ($24) dollars and maximum of sixty-six ($66) dollars.

In New Orleans the flat Public Belt rate is two ($2) dollars per car and in San Francisco two and one-half ($2.50) dollars per car.

Until the public belt, if built, has paid off its indebtedness, a larger rate should be charged and when on a self-supporting basis the rate reduced to produce an amount sufficient to pay the operating and maintenance charges.

The object of the public belt should be to serve the public at the lowest possible cost, and not as a money making investment for the city.

NEW WORK.

Light Street Bridge.

Among the new improvements suggested by this Department is the Light Street Bridge.

Three distinct studies have been under consideration, but until the necessary funds are appropriated to cover the cost of borings, plans, etc., nothing further can be done. Each study is separate and distinct, and each is dependent on conditions not common, one to the other.

It would be a grave mistake to arbitrarily select a location for a bridge, the construction of which will cost from three hundred thousand ($300,000) dollars to three million ($3,000,000) dollars, not knowing the character of bottom, having no idea of the money available, proposed neighboring improvements, width of roadbed, rail lines, etc. Improvements of this kind cannot be planned over night, but require time and thought.

There are many questions of vital importance, each one of which deserves the most careful study, and should be open to free discussion by the public to get the best results.

The question of location depends largely on the channels, foundations, approaches, etc., and whether it is wiser to construct a bridge at a height to permit the free passage of tugs and their tows without opening the draw, or whether it be at an elevation requiring the constant opening and closing of the draw, thereby delaying vehicular traffic in this day of rapid transit.

If Spring Gardens is to be improved, as recommended, then the direction of the main channel should be changed, and Ferry Bar cut away; this will be a big factor in selecting a proper location for the bridge.

Again, the location will depend somewhat on the new proposed waterfront street and the proposed development of the Patapsco River from the present bridge to Elkridge Landing.

Each one of these improvements should be given consideration and authorized or eliminated before the site of the bridge is determined.

Spring Gardens.

Two or three plans for improving Spring Gardens have been worked up by this Department.

One was prepared at the time of the Grade Crossing Ordinance of the Baltimore and Ohio Railroad and eliminated the additional draw span across the channel by paralleling the present bridge of the Western Maryland Railroad and substituting a four-rail two-leaf bascule for the present swing draw. This plan was disapproved.

I have recently completed another study which does away with the Western Maryland Railroad trestle and the proposed trestle of the Baltimore and Ohio Railroad.

This study carries with it a tentative plan for all of the waterfront lying between Ferry Bar and the foot of Howard street, and is intended, as its title would imply, as a study only. None of the details, such as the overhead crossings, etc., have been accurately worked out, but it does show the possibilities of this part of our harbor.

North from the Western Maryland Draw-Bridge.

The improvement provides for a slip 2,700 feet long north from the draw-bridge of the Western Maryland Railroad to the head of Spring Gardens. At the draw the slip is 600 feet wide, and at the north end 400 feet wide. The plan shows that a vessel 530 feet in length and 55 feet beam, together with a tugboat and a lighter alongside, would have free passage in and out the slip while the bulkhead on either side was occupied by a vessel 530 feet in length and 55 feet beam with a lighter alongside.

By purchasing the riparian rights along this waterfront and constructing bulkheads on the line as shown in plan, and filling behind the bulkhead to the present shore line, the city can reclaim 5,572,000 square feet of land, or 128 acres.

The land thus made is most admirably located for industrial improvements, which the city could dispose of at a low price, and at the same time retain possession of all riparian rights.

Railroad Bridges.

The adoption of some such scheme, as shown, would provide a right of way for the tracks of the Western Maryland Railroad, which would make possible the removal of the draw span, which is a great menace to any waterfront development of that part of the harbor north of the bridge.

A recent grade-crossing ordinance gives to the Baltimore and Ohio Railroad the right to construct another trestle north of the present trestle of the Western Maryland Railroad across Spring Gardens. The construction of such a trestle would destroy for all time the usefulness of this part of our harbor for water transportation. By rearranging the proposed lines of the Baltimore and Ohio Railroad they could be carried around the proposed slip and thereby avoid the construction of another draw.

Overhead Crossings.

A crossing over the new proposed lines of the Western Maryland Railroad and the Baltimore and Ohio Railroad could be made from Leadenhall street with an extension east to Fort avenue on the east side of the slip. Likewise, a street could be carried over the tracks from the west side of the slip to Warner and Wooster streets.

Street Reservation.

A reservation of 152 feet parallel to the bulkheads on either side would give a width sufficient to allow the construction of sheds, or buildings, 60 feet wide, with a street on the water side 50 feet in width and on the other side of buildings 42 feet in width. The waterfront street to be provided with a track for a traveling crane located close to the bulkhead, and a track of the municipal belt line to be run on either side of the buildings. Back of the curb line would be the main line of the belt road.

The West and South Shore of Spring Gardens, from the Western Maryland Trestle to a Point West of Ferry Bar.

It is proposed to change the course of Gwynn's Falls and to extend a bulkhead for a distance of 2,000 feet from the Western Maryland Bridge, back of which provision is made for a public street 100 feet wide. From the end of this bulkhead provision has been made for the construction of six piers of an average length of 600 feet, and at the head of piers in the continuation of the public street 100 feet in width to the new proposed Light Street Bridge; this street to carry the tracks of a municipal belt line.

The topography of the waterfront is such that to extend piers out from the present shore line would necessitate the cutting away of the hill, in order to bring it to a grade desirable for development, and at the same time accessible to the piers. The plan, as here shown, would make possible the reclaiming of 4,032,000 square feet of land, or 93 acres.

North Side of Spring Gardens, from Ferry Bar to the Western Maryland Bridge.

The plan here shows six piers of an average length of 700 feet, with ample width of docks and a marginal street carrying the tracks of a municipal belt line.

I feel the construction of piers in this space more desirable than the continuation of the bulkhead, as the harbor at this point is wide enough to permit all vessels to use the piers and the linear feet of dockage space is very materially increased.

Main Channel.

The present channel is 200 feet wide and 24 feet deep. The plan provides for the dredging of all other water lying between the pierhead and bulkhead lines to the same depth as the main channel. From the proposed Light Street Bridge, easterly, the direction of the main channel will be changed, as shown by dotted lines, cutting off the end of Ferry Bar, as the present channel, by way of the Light Street Bridge, turns abruptly and almost at right angles, making Spring Gardens inaccessible to vessels of any length or draft. That end of Ferry Bar occupied by the small yacht clubs to be improved and made a public park.

GENERALLY.

A development, similar to the one presented, would provide for the industrial growth of our city for many years.

There could be no objection to the operation of the lines of the municipal belt in this section. The location is central, being almost in the heart of the town, and the present developments so few that the cost of the riparian rights would be very small, in comparison with the riparian rights in any other part of our harbor.

The bottom is of such a character that the cost of the construction of piers and bulkheads will be somewhat in excess of the cost of those constructed by the city in the upper harbor. If the material dredged is to be pumped back of the bulkheads a large factor of safety must be allowed in the design of any bulkhead work to hold a fill of this character, as the pressure against the sheet piling is very great and there is little opportunity of tying it back in a permanent and substantial manner.

Assuming that the city undertook to construct that part of the improvement lying between the Western Maryland Bridge and Howard street, as above stated, the land reclaimed would amount to 5,572,000 square feet, which if sold at 50 cents per square foot, would equal $2,786,000. Figuring the cost of bulkhead work at $120 per linear foot (the cost of our last bulkhead work of concrete design, not including dredging, being $65 per linear foot), the cost of bulkhead will equal $648,000, the cost of dredging $638,000, or a total of $1,286,000, leaving $1,500,000 to pay for the riparian rights.

I realize quite fully that there is no possibility of starting work of this magnitude at the present time, but would respectfully recommend that such steps be taken, as are deemed advisable, to secure the authority of the United States Government to extend the pierhead lines as shown in the proposed plan, and also such other steps as may be necessary to acquire all riparian rights involved in this proposed improvement as an entirety.

PATAPSCO RIVER.

The Patapsco River can be made navigable from Light Street Bridge to Elkridge Landing at a nominal cost.

This is entirely a State proposition, in which the City of Baltimore should naturally be very much interested.

I feel that the making of the Patapsco River navigable, as suggested, is of very much more importance to the city and the State than the deepening and widening of the Chesapeake and Delaware Canal, and of any contemplated improvements in the Susquehanna River, in view of the fact that it is closer to home.

It is possible that Federal aid could be secured, and I would recommend that a bill be introduced in Congress, authorizing a survey, which in itself would be of great assistance to the State and city in determining the advisability of making such an improvement.

Respectfully submitted,

OSCAR F. LACKEY,
Harbor Engineer.

George Trice (4 months, 17 days)	Special Guard

BALTIMORE, July 21, 1914.

To His Honor, the Mayor, and Members of the City Council:

I have the honor and pleasure to submit the annual report of the Sub-Department of Health for the year 1913.

In it you will find a full statement of the work done by the several divisions, which I consider very instructive and creditable, and from which may be obtained suggestions for further improvement, to which, from time to time, I shall call your special attention in the future.

Yours respectfully,

NATHAN R. GORTER, M. D.,
Commissioner of Health.

ANNUAL REPORT

OF THE

ASSISTANT COMMISSIONER OF HEALTH

Report of the Assistant Commissioner of Health.

BALTIMORE, July 1, 1914.

NATHAN R. GORTER, M. D.,
Commissioner of Health.

DEAR SIR:

I hereby submit to you the report of the work of the Sub-Department of Health for the year 1913.

It has been constructed along the lines laid down in the report for the year 1912, with the addition of a few tables prepared by Miss Cowell showing deaths from certain diseases that occurred in former years. These tables were added to the report for this year just as similar tables were added to the report for the year 1912, merely for the purpose of having records which might be used in future work, and, therefore, have nothing to do with the year 1913. We have prepared a number of tables and diagrams which were used by the Bureau of Municipal Research in its display given by the Bureau at the City Club rooms in the autumn of 1913. Many of these have been included in the reports of the Bacteriological Laboratory, Chemical Laboratory and Tuberculosis Division, but there are also others showing the total death rate (white and colored population combined and separated) from 1875 to 1912 inclusive; reported birth rate; the death rate of children under one year of age; the death rate due to tuberculosis, typhoid fever, cancer, scarlet fever, diphtheria, etc., which have not been included because it was not deemed desirable to present them at this time, owing to the fact that we have not had the time to devote to such productions required to present them in proper condition and with sufficient explanation.

The reports of the medical examiners of public and parochial schools and their assistants, the nurses, are in the usual forms and again show that which has been pointed out in former reports: the great need of additional nurses to make fully effective our present force of examiners. The nurse is the one that does the "follow-up" work, without which the medical examination of schools would be almost worthless, and therefore the increase of nurses would greatly enlarge and better the results now obtained.

We also again call attention to the desirability of systematizing and correlating the work in the different groups of schools so that we could accomplish the constructive work with permanent results and perhaps also bring it into the intensive vital statistics study of the sanitary districts of the city. This only can be done by having some properly equipped person appointed whose work would be confined strictly to this subject. Much good is being accomplished even with our present force, but it is quite evident that the amount of good varies greatly in the different schools, which seems to be due chiefly to the want of appreciation on the part of parents and guardians of the great importance to the children of having defects promptly and thoroughly corrected, and of the want of facilities to get the defects attended to by physicians. This difficulty can be greatly overcome by increasing the amount of time the nurse can devote to each child (by increasing the force of nurses) and by providing clinics of sufficient number and good character to attend to the children.

It appears that no clinic is needed more than a dental clinic. A careful perusal of the tabulated report will show that the attention to the teeth varies a great deal in different sections of the city and in different schools in the same section. This variation arises from at least two causes:

First—The difference in the character of parents and guardians.

Second—The facilities for having the teeth attended to.

The first cause is one that can be overcome by the expenditure of much time and patience in efforts to convince careless parents of the value of mouth hygiene. This is being done to the extent of the powers of the present force of nurses, but we are convinced that many parents neglect the mouths of their children because of the want of "clinics" rather than to indifference to the condition of the teeth. Some have contended that free clinics are already provided by dental schools and do good work for all who apply. This is true, but the number is not more than three and even though they were equipped to attend to all possible candidates for treatment, there would yet remain the great difficulty of sending young children to distant points from home. Everyone is aware that for free medical care of the sick, citizens' dispensaries (besides those conducted by medical schools) have been established and maintained in many places, but we do not recall seeing in such places a well-equipped dental clinic, or indeed one of any kind. Dr. B. Holly Smith, chairman of the Oral Hygiene Council of Maryland, has furnished a summary of the work done in the year 1913, at dental clinics supported by their association, a copy of which is as follows:

> At the Parental School, of which Mr. Read is the principal, the mouths of forty (40) pupils were put in perfect condition during the past year.
>
> At School No. 9, corner of Greene and Fayette streets, during the past scholastic year there were 186 cases examined, 76 cases completed, 79 cases in which only most necessary work was done, 16 cases sent to city dentists, 12 cases refused to have work completed, and two cases left school; total, 201 treatments. One hundred and fifty-four amalgam fillings introduced, 39 cement fillings introduced, 28 gutta-percha fillings introduced, 92 temporary teeth extracted, 20 permanent teeth extracted, and 73 cases had teeth cleaned and polished.

The above shows that there is an acceptance on the part of some parents of such meagre facilities, and any person familiar with the work must know that increased facilities will greatly increase the good results. We think that it is too often in the minds of the people that such clinics are associated with decayed teeth only. Such a limitation is not or should not be to such a field, but should include many pathological conditions of the mouth and the pharynx, which are believed to be the cause in many cases of backwardness in studies.

It is not necessary for me to use time and space to call your attention to the report made by heads of divisions that have already demonstrated their value. There are many suggestions made by them and ideas for improvement in our work may be deducted from them. It is perhaps wiser from every viewpoint to submit such things that are involved in a plan of reorganization which has for its object efficiency and economy to repeated conferences of experienced health officers, rather than have set forth here the view of any one officer.

Yours respectfully,

C. HAMPSON JONES, M. D.,
Assistant Commissioner of Health.

ANNUAL REPORTS

OF THE

Medical Examiners and Nurses of the Public Schools

Report of Dr. H. Warren Buckler.

BALTIMORE, June 11, 1913.

NATHAN R. GORTER, M. D.,
Commissioner of Health.

DEAR SIR:

In accordance with the custom of preceding years, I beg leave to submit my annual report as medical inspector in the public schools of Baltimore, for the school term of October, 1912, to June, 1913.

As you are aware, the duty of the inspector consists in visiting the schools allotted to him and of making an inspection of *all* children in the kindergarten and first four grades. Each child has a card, with the defects required by the Department to be detected, printed thereon, and as the inspector examines the child he marks on the card the existing defects if there be any. Small printed notices are then given to the child announcing the existence of such defects and advising the parent to seek medical aid.

At the end of the first inspection, the inspector again visits the schools and re-inspects all those children found defective at the first visit, and notes whether his advice has been followed or not.

In all, I have visited 18 public schools and seven parochial schools, having inspected 9,943 children.

A glance at the card containing the list of defects to be detected will show you that a number of them are of no significance whatsoever in so far as the health of the child is concerned. In consequence, a vast deal of time is wasted in noting and notifying.

When the work of inspecting the public school children was first begun, this method just outlined proved efficacious enough for the time being. The inspectors were unexperienced; each record made was a new one; the teachers were doubtful of the value of the inspection, and the parents disinclined to co-operate. Now the state of affairs is somewhat different. Each child, with the exception of those entering school for the first time, has been inspected at least eight times, and those whose parents were inclined to heed the advice given, have been treated long ago. The beneficial results of the inspection, therefore, are yearly growing less, and I personally feel that the present system has passed the limit of usefulness.

For the past two years, while carrying out the routine as prescribed by the Department, I have been following special lines of work suggested by study and personal past experience. As I look upon the question today, the work of the medical inspector and school nurse might be classified under three distinct headings:

I. His relation to the community.
II. His relation to the child.
III. His relation to the school.

By the value of the inspection to the community I refer to what a public school medical officer should do towards the control and prevention of all communicable diseases, in so far as the school may be regarded, as the source of infection. In some instances this would be a comparatively simple task, but in epidemics of the various contagious diseases the problem would be a most difficult one. If you consider for a moment the havoc that scarlet fever, measles, diphtheria, chicken-pox and mumps have played in our schools during the past session, you will agree with me that it is a question that merits careful consideration.

How do such diseases get a start in the school? Usually through the attendance of a child or children who are not under the care of a physician. At present the only way your

Department becomes aware of the existence of any contagious disease is through the report of the attending doctor. The principal or teacher is then notified to exclude such cases and all contacts, but a period of at least three days elapses between the time of diagnosis and the time of exclusion of suspects. If the medical inspector was a daily visitor to the schools it would be a simple matter for the various teachers to send to him all suspicious cases, and, from my experience, the teachers are pretty keen in detecting the prodromal evidences of the common contagions.

Parents, even the most careless and ignorant, usually keep their children home if ailing. Any child absent for a consecutive period of three days should be visited by the school nurses, and if found to have a contagious disease, should be excluded, together with other members of the family, and not allowed to return until released by the inspector.

It is not at all an uncommon occurrence to see a child sick for several days with the prodromal symptoms of an eruptive disease, return to school as soon as the symptoms subside, covered with a rash. Nor is it infrequent that parents will return children to school (who have had unreported cases of contagious disease) when their condition does not warrant association with others.

I believe, further, that the classroom is an important factor in the prolongation of epidemics, and any room in which there have been several cases of any contagious disease should be fumigated, and such fumigation repeated if necessary. Daily visits to the schools would necessitate an increased force of inspectors, or else a shifting of such work to the ward physician, but it is a matter of such vital importance that I believe some attempt should be made to put a system of inspection of this kind into effect. This phase of the medical inspection is the only one that deals essentially with the Department of Health, the others being of more interest to the Department of Education.

Under the second heading: "The Relation of the Inspector to the Child," I wish to discuss the association between physical defects and progress in studies. I do not believe that the public school medical officer in his official capacity of examining the school children should take note of any defects other than those that may have a bearing upon the progress of the child in school. Any effort on his part to advise or insist on the correction of other defects is, in my opinion, beyond his jurisdiction, and is responsible for the resentment and lack of co-operation manifested oftentimes by parents and family physician. In my report last year I endeavored to show the relationship between certain physical defects and retardation. I pointed out at that time that defective breathing, defective vision, and defective nutrition were present in a sufficient number of children repeating the grade, or rated as dull by the teachers, to warrant the assumption that they were certainly a contributing cause. This past session I have been able to reinspect many of those children previously rated in the repeater and retarded groups and to note what effect the correction of the defect had upon the child's progress. My conclusions are about the same as those in last year's report, viz.: that defective breathing and defective nutrition may be the cause of backwardness in studies, and that defective vision *is* an important and frequent cause. Let me place before you in tabulated form the relation between repetition and retardation, and defective breathing, defective vision and defective nutrition.

	Session 1911–1912	Session 1912–1913
Number children with defective breathing....	972	917
Number repeating grade....................	288	367
Number retarded in studies................	317	285
Number making normal progress..........	367	265
Number children with defective vision.......	400	454
Number repeating grade....................	206	229
Number retarded in studies................	137	159
Number making normal progress..........	57	66
Number children with defective nutrition....	242	352
Number repeating grade....................	78	150
Number retarded in studies................	94	100
Number making normal progress..........	70	102

In studying the repeaters and retarded children of the session of 1911-1912 with reference to the effect of correction of defects upon such backwardness, let me ask you to review the following table:

Defective Breathing.

	Repeaters, 288.	Retarded, 317.
Treated and progressive............	77, or 26%	47, or 14%
Treated and *not* progressive........	35, or 12%	17, or 5%
Not treated, and progressive........	62, or 21%	24, or 7%
Not treated, and not progressive....	112, or 39%	38, or 12%
Not examined	2	191

Defective Vision.

	Repeaters, 206.	Retarded, 137.
Treated and progressive............	59, or 23%	35, or 25%
Treated and *not* progressive........	15, or 7%	4, or 3%
Not treated and progressive........	17, or 8%	7, or 5%
Not treated and not progressive....	70, or 34%	34, or 25%
Not examined	45	57

Defective Nutrition.

	Repeaters, 78.	Retarded, 94.
Treated and progressive............	28, or 37%	6, or 6%
Treated and *not* progressive........	5, or 6%	....
Not treated and progressive........	5, or 6%	....
Not treated and not progressive....	30, or 39%	13, or 14%
Not examined	10	75

From the above it will be seen that in every instance where treatment was followed out, the percentage of progressives is greater than among those who declined the advice of the inspector, and especially is this true in the cases of defective vision.

A system of inspection along the lines suggested by this study is of tremendous economic importance to the city whose School Board is spending thousands of dollars annually on backward children. It is, however, a question that concerns the Department of Education, rather than the Department of Health.

The relation of the physician to the school was the third division made by me for this report.

The indices of efficiency of any school are the progress of pupils and their attendance. I have already discussed the former. I now want to show of what value the nurse and doctor may be in caring for the sick, absent children. The miserable attendance record in the Baltimore schools is due to an insufficient, incompetent and ignorant group of attendance officers. Theoretically, sickness should be the only justifiable cause of absence. If an officer goes to the house of an absentee and is informed that such absentee is sick, she goes away and returns a report that the child is home on account of personal illness. She is unable to ascertain whether this be the fact or not, on account of a lack of knowledge. A well-trained nurse visiting the absent child would, in the majority of instances, be able to say whether the child was really ill or faking. She could herself relieve trivial ailments and advise what proper medical assistance could be obtained if needed. I instructed my nurse during the past year to visit absentees reported by the attendance officer as home on account of "personal illness." In all she was able, with her other duties, to visit 114 children. Of these only 36 were, in her opinion, sufficiently sick to stay from school. Eighteen were perfectly well and had bluffed the attendance officer. Fifty-eight had some minor ailment, forty-three of whom she treated and returned to school the next day, and the remaining 15 she sent to their physicians or the nearest dispensary. The balance were home for causes other than illness.

The physician can be of value to the school in other ways. The separation of the mentally deficient into small classes is a matter that is engaging our school authorities. Naturally the selection of such cases should be backed by the opinion of the school physician. The same is true in the formation of fresh-air classes for cases of suspected tuberculosis.

There is a great deal still to be done towards improving the sanitation and ventilation of many of the schools to which work the medical inspector should give more time, and over which he should have full jurisdiction. The decision as to whether delicate children should be allowed to progress, is a question that should be referred to the inspector yearly. The over-pushing of ambitious children who have not the physique to stand the strain is the cause of much of the choreas tics and other allied disorders not uncommon in our schools.

I believe I have called your attention to most of the more important features of medical inspection as they present themselves to me. It is for you to decide what shall be the scope of the work in the future.

Respectfully submitted,

H. WARREN BUCKLER.

Report of Dr. I. R. Page.

BALTIMORE, May 26, 1913.

NATHAN R. GORTER, M. D.,
Commissioner of Health.

DEAR SIR:

I beg to inform you that in accordance with instructions received from you September 25, 1912, I have inspected (with the efficient co-operation of Miss M. A. Gorter) the children in the public and parochial schools that have been formerly assigned to Dr. J. H. Iglehart, and after a primary inspection have reinspected all defectives and examined absentees and new children not seen on first visitation.

Complete reports of every school have been furnished the Health Department, giving number of pupils examined, number of ones re-examined, number of defectives cured, improved, "not treated," also conditions of school buildings from a sanitary point of view.

Our experience in school work leads us to believe that what is needed is an increase in the corps of nurses; in order to vitally impress the average mother she must have the voice of the visitant nurse to *instruct* as to the importance of remedying defects, as well as the *visual information* imparted by the notification card of the Health Department.

Owing to the fact that there is relief to be had at dispensaries and hospitals where men of ability and experience do remove the grievous handicap from which the defectives suffer, it is all important to arouse the mothers and remove their indifference and get the children where they can be treated; but "so few visitants," so many mothers! What are these chosen few among such a multitude of mothers? Get us more nurses!

Respectfully submitted,

I. R. PAGE, *Medical Inspector.*

Report of Nurse Miss M. A. Gorter,

Assistant to Dr. I. R. Page.

BALTIMORE, June 11, 1913.

NATHAN R. GORTER, M. D.,
Commissioner of Health.

DEAR SIR:

I respectfully submit my report as school nurse, from October, 1912, to June, 1913.

The routine order of work has been the same as in former years, viz.: mornings spent in assisting medical inspector in inspecting and re-inspecting thirty schools.

My additional work has been to make frequent visits to about twenty of these schools, those needing most attention, inspecting and instructing children in them, treating a number of cases of impetigo, blepharitis, etc., following up to their homes bad cases of mal-nutrition, adenoids, defective vision, etc., visiting some homes as often as six times. When desired by parents unable to take their children to dispensaries, have done so for them; also visited social agencies in co-operation with work. Have taken a number of bad cases of defective vision for treatment, and of adenoids and enlarged tonsils for removal to dispensaries.

Those children who were deaf, dull, anemic, etc., are improved. Many cases of defective vision have been treated during the year. Fifteen poor children have been given glasses and three were helped in obtaining them. Three cases were transferred to the School for the Blind. One boy, who could scarcely see to read, who was considered feeble-minded, and was a nuisance to the teacher, the nurse, after repeated visits to home extending over a period of several years, induced mother to have eyes examined and get glasses. Now the boy reads well, writes beautifully, and gives no trouble in school. There are still many school children handicapped by obvious physical defects, whose parents will not heed advice.

The educational value of the nurses' work is being shown, however, by increased co-operation on the part of parents in sending children to family doctors and dispensaries and by the children themselves in cleanliness, care of teeth, etc.

For the valuable aid and encouragement of the teachers, for courtesy shown and fine work done in the Presbyterian Eye, Ear and Throat and the Baltimore Eye, Ear and Throat Hospitals, to Federated Charities, School for the Blind, Henry Watson Aid Society, attendance officers, tuberculosis nurses, instructing visiting nurses, and to all who have by hearty co-operation added to the efficiency of my work, my sincere thanks are extended.

Respectfully submitted,

MARIE ALIDA GORTER, R. N.,
School Nurse.

Report of Dr. Henry B. Kolb.

BALTIMORE, July 31, 1913.

NATHAN R. GORTER, M. D.,
Commissioner of Health.

DEAR SIR:

I herewith respectfully submit my report of medical inspection of public and parochial schools for the season of 1912-1913.

The public schools examined were Nos. 2, 3, 6, 7, 8, 23, 24, 25, 26, 27, 38, 40, 42, 43, 47, 73, 77, 93, 97, 105 and 108. The parochial schools were St. Leo's, St. Elizabeth's, St. Patrick's, St. Stanislaus', St. Casimir's, St. Bridget's, St. Michael's and Holy Rosary.

The first examination of pupils was as follows: Total number of pupils, 13,958; out of this number we found 4,723 defective, excluded 66, and we also ordered 1,077 vaccinations.

On our second examination we found 1,633 of the defective children had been cured, and 1,378 improved; the remainder being still defective.

The dreaded, miserable condition of pediculosis has been reduced considerably, according to my nurse's statement, and on our second examination we found still greater improvement; due, I am sure, to the untiring efforts of the nurse, Mrs. Knorr. It was noticeable that the children in the parochial schools were cleaner than those in the public schools, only about a dozen out of all we examined suffering from pediculosis. Our reports also show nearly all children are admitted to the parochial schools without being vaccinated, a condition which should be remedied.

In regard to the schools in one district, most of them are old buildings, poorly equipped and badly ventilated. However, particular attention should be called to the following schools:

A group of buildings comprising No. 93 are in wretched condition. The eastern and western annexes and the portable building all have damp walls; moisture oozes through them in wet weather. The rooms are draughty and the light very poor.

No. 40's toilet facilities should be rearranged. At present a number of the closets are placed too near the heating plant and the resulting odor, while perhaps not detrimental to health, is very disagreeable and at times nauseating.

The rooms on the north side of the first floor of No. 73, Aisquith street, near Mullikin, are very badly lighted. It is often necessary that artificial light be used, and even that is insufficient, because the jets are placed high up and no means used to increase the light which the ordinary jet throws.

The same conditions as related of No. 73, are found at No. 43, on High street, near Fayette.

I would like to mention the overcrowded condition of some of the parochial schools, notably St. Stanislaus' and Holy Rosary. This seems to comprise the conditions that need most urgent attention.

I would also call attention to the need of a greater number of nurses, thereby giving the children the attention they really require, and which it is impossible for one nurse to do alone.

Respectfully submitted,

HENRY B. KOLB, M. D.

Report of Nurse Mrs. Henrietta E. Knorr,

Assistant to Dr. Henry B. Kolb.

BALTIMORE, August 22, 1913.

NATHAN R. GORTER, M. D.,
Commissioner of Health.

DEAR SIR:

The enclosed report is of work done in the public schools as Dr. Kolb's assistant. In addition to submitting the figures representing our work, I desire to mention the great improvement noted by the teachers in children who have had adenoids and hypertrophied or diseased tonsils removed. Thirty such were taken by me to dispensaries for operation.

With the assistance of the Hebrew and Federated Charities, seventeen children with defective sight have been supplied with glasses.

One strabismus case was operated upon, and numbers had eyes examined and procured glasses for which parents were able to pay.

The need of an additional nurse in Dr. Kolb's district is great, much of the time devoted to visiting being spent in explaining matters through an interpreter, thereby decreasing the number of cases reached and instructed in a district where each family should be visited. However, a general improvement has been noted from year to year. The principals of schools and the teachers render invaluable aid in this work, and I thank them most heartily.

COMPLETE REPORT OF WORK DONE, OCTOBER TO JUNE, 1912–1913.

Examined with Dr. Kolb	18,296
Examined alone	18,997
Visits to homes	923
Visits to dispensaries	73
Treated at home	11
Treated in school	3
Inspected at home	45
Excluded	70

Respectfully submitted,

HENRIETTA E. KNORR, R. N.

Report of Dr. A. K. Bond.

BALTIMORE, July 31, 1913.

NATHAN R. GORTER, M. D.,
Commissioner of Health.

DEAR SIR:

I herewith submit my report of medical inspection of public schools in Baltimore for the year of 1912-1913, an inspection covering the first four grades, and pupils from the higher grades especially needing examination.

The public schools committed to my care lie in an outer belt extending from Patterson Park on the south to Druid Hill Park on the west, and are attended for the most part by children of well-to-do families; although in each school, without exception, there are larger or smaller groups of children from squalid districts showing evident signs of deficient care and nourishment. Thus, in every school of my district the importance of medical inspection for the protection of the scholars from disease and filth, either carried to the school by the individual pupil or contracted there, is clearly shown.

Of the seven parochial schools inspected by me, some urgently need inspection, while others are so favorably located and so well supervised by those in charge that almost nothing is found requiring criticism. All of the parochial schools, however, show the need of a strict requirement, that all pupils on *admission* shall present proofs of successful vaccination. Those in charge of one or two of the schools have responded to my suggestions upon this point very earnestly and with much success, but it is quite evident that those in charge of certain other schools must be driven to this measure by their spiritual superiors.

All of the schools under my care have been subjected to inspection and to reinspection; my rounds being so arranged as to give early attention to those inspected late in the preceding school year, and to facilitate the work of the school nurse in her afternoon visits for more detailed care of individuals found in the inspections to be defective or brought to our attention at other times by the principals.

I desire to acknowledge the courtesy and co-operation extended to us by the teachers, and also to testify to their vigilance in a matter of great public interest—that during school terms in which an extensive epidemic of eruptive fevers prevailed in the region in which the schools were located, affecting thousands of children, only a single one out of all the pupils inspected showed even a suggestion of such disease.

I regret that occasionally hostility is shown to the work by parents who appear to consider inspection as a personal intrusion by the inspector into their private affairs. This misunderstanding could be cleared up if the process of inspection were (like the presentation of a vaccination certificate) entered among the regulations of the School Board as an essential and unavoidable part of its regular school curriculum. This would eliminate the feeling that it is a sort of sanitary police invasion of the curriculum by the Health Department.

Every evidence is presented, however, that the work is growing in public favor. Principals and teachers welcome the co-operation of inspector and nurse, and pupils show increasing sanitary intelligence.

In my last report I discussed at length the elimination of pediculosis from the public schools. In the worst cases, as I said, the patients are nightly reinfected in their own homes; but I have found in the past year one or two instances of infection, clearly proved, occurring in the classroom itself, the pediculi here crawling from filthy to cleanly children. In one school a number of careful mothers in succession complained that their children had contracted head lice (one of the children being compelled in consequence to lose a week from her studies), and finally the infection was traced to a little neglected girl whose seat was almost in the centre of the group affected. Compulsory education implies an obligation on the part of the city to prevent such infections. My attention has been drawn also by teachers to the probability of infection with pediculi occurring through contiguity of hats and cloaks in the cloakrooms. From these observations and those set forth in my last report, it may be seen that the banishment of pediculosis from the schools cannot possibly be met by school inspection, unless some means be instituted for cleaning up and keeping clean certain badly infected homes; and unless the School Board establish some method of preventing classroom and cloakroom transmission of these noxious insects.

Inspection has resulted during the past terms in operations upon a considerable number of pupils affected with marked enlargement of the tonsils and adenoids, often with decided improvement in health and in power of attention to lessons. The treatment thus given, either by private practitioners or by hospital surgeons, is, however, in many cases very insufficient and unsatisfactory. There is need of corrective after-treatment lasting for months, perhaps, which the little patients do not receive, and the surgical work is in some instances improperly done. In many patients the original inflammatory condition of the naso-pharynx does not clear up after the operation, and at the reinspection there is found still a muco-purulent discharge, with mouth breathing and perversion of voice tones. In other patients the uvula has been cut off and there are other throat injuries suggestive of inexperience or imperfect anaesthesia, with hurried work. A "pupils' hour" on Saturday at certain hospitals, when operators of experience could find leisure for special attention to children referred to them from the schools, would give the best results and save the time of parent and pupil. Moreover, with such a designated hour for these appointments better records could be made of each case, and oversight could be exercised in a medical way until the special aim of inspection—restoration to full health and ability to profit by school instruction—is attained. The "mouth breathing" habit often persists after operation, and should be corrected by prolonged care of the nasal parts, supplemented perhaps by school classes for training in proper respiration and vocalization.

Being required to report on the mental health of certain pupils considered defective, I would here express my deep sympathy with these unfortunates and my hope that the measures already initiated by the School Board for their relief may be early brought to completion. The inspection of the classes of backward children in certain schools is the one sad thing in my yearly rounds. The boys especially have the faces of Ishmaels and Pariahs, of outcasts at war with their surroundings.

No human being in their state of mind could have the best that is in him developed. There are other isolated boys whom I find at nearly every visit sitting, sour and idle, in the anteroom of the principal's office. They sit there because they are "impossible" in the classroom with ordinary pupils, and because there is nowhere else for them to sit. The proper treatment for such brains is *not* idleness nor reproof, but occupation, probably manual, based upon expert study of their intellectual possibilities. Even the incurable and periodically violent inmates of insane asylums have this much granted to them by modern enlightment.

I have endeavored in each such backward case to discover and secure the removal of any evident physical condition which might have to do with their incompetency, but the results of my efforts have not been satisfactory.

There are many cases of mal-nutrition found during inspection. The patients are obviously unfit for work and incapable of giving any proper return for the money expended by the community for their instruction. The problem is not fully met by the notice sent the parents, the visits of the school nurse, or the interest of various benevolent organizations whose attention is drawn by her to the patient. The parents, through ignorance, poverty, indifference, sickness, or largeness of family, are able to do little in the matter. Prolonged oversight by a skilled visitor is needed—one who can stick to the case until school health is again attained. Such care could be given if the often-requested accession to the staff of nurses were in the form of a corps of home nurses, whose business was to follow up in the homes of the pupils the suggestions of the inspector and the school nurse.

To such a home nurse could be referred cases of malnutrition, of obstinate and recurrent pediculosis, and chronic but remediable hindrances to study arising from physical defects; also certain very annoying cases of "evil habits" which have repeatedly been brought to our attention by the teachers as disturbing to school discipline, injurious to school morals, and injurious to health. The correction of this evil is partly medical and partly a matter of oversight and re-educating in the home. My information on the subject is based entirely on appeals which have come from the teaching staff of the schools, as it is evidently a matter which cannot be dealt with at a visit of inspection. It is probably the most difficult problem involving health and school work which we have to face in our cities.

The physical conditions of the school buildings require no unfavorable comment and such sanitary defects in management as have been pointed out to the principals have received attention. The general health of the pupils throughout the schools was excellent.

Respectfully submitted,

A. K. Bond, M. D.,
Medical Inspector.

Report of Nurse Miss Virginia B. Lorentz,

Assistant to Dr. A. K. Bond.

BALTIMORE, July 31, 1913.

NATHAN R. GORTER, M. D.,
Commissioner of Health.

DEAR SIR:

The public schools over which I have the nurse's supervision vary as to the class of children to a large extent. Those located in the eastern section of the city need more attention than of the northeastern. The children of the latter class are generally well clothed, well nourished, teeth well cared for and the parents willing to do anything for their welfare that is within their power. The former section is composed of foreigners, a number of which cannot understand English, and the children act as interpreters. It is, therefore, quite necessary to use the simplest language within the comprehension of the young interpreter. On the whole, we manage to get along. It goes without saying that the homes of these children need more visiting than any other.

Last winter I visited a number of homes and received permission to take the little ones to the dispensary for removal of adenoids and tonsils. Some of the parents are too nervous and frightened to go themselves and are glad to be released of, to them, this most disagreeable duty. When the nurse points out to the parents the injustice to the child of allowing him to grow up hampered with defective eyesight, tonsils, adenoids, otorrhœa and many other distressing ailments which are a real menace to his future development, they will be convinced of the truth and will either set about to have the evil remedied or ask the nurse to do so for her.

St. Joseph's Hospital being more centrally located for me, I took the larger number of my little patients there. The doctors and nurses were most kind and attentive to the children.

There is one school I feel as though I should mention especially, as I have in nearly every visit I have made to the homes of the children attending this school, received the hearty co-operation of the parents. They immediately set about doing what is asked of them. This school is on Lakewood avenue, near Orleans street. While there are a number of foreigners attending, they are of a good class. They live in nice clean homes and the children are well cared for.

One afternoon I went into a classroom to look after some children. The teacher said one of the boys was sick, that she did not know what was the matter. I decided I would find out. Made my visit, found boy suffering with swollen neck and high fever. Went to Hebrew Hospital and asked them to send doctor to see what really was the trouble. Next day followed up the case. Found doctor had been there and left medicine and said if he did not get better in a day or two to let him know. Fortunately he was well in a short time.

There is such a large field to cover that it is not always possible to keep track of the cases as one would like. The "school public" is learning that the nurse is trying to help and takes an interest in the children, and they do not deem us officious as they did formerly.

Having been on the staff for some time, I can well remember when the nurse was treated with positive rudeness when the homes were visited. I think I can say that has not occurred to me once for the past two years. So we feel each year that we are accomplishing more and more.

Very respectfully,

VIRGINIA B. LORENTZ,
Nurse.

Report of Dr. Richard A. Urquhart.

BALTIMORE, July 31, 1913.

NATHAN R. GORTER, M. D.,
Commissioner of Health.

DEAR SIR:

I desire herewith to submit my report as medical inspector in the public schools for the year ending June, 1913.

The nature of the work has changed but little and the results are practically as in previous years.

I do not believe it is practical to accomplish more than is now accomplished, nor to change the system to any appreciable extent with the means appropriated for this purpose.

Familiarity, based upon four years in this work, persuade me that by far the greatest good is to come from the close association of the school nurse with the parents in their homes. This fact has been emphasized in all the yearly reports of the inspectors without as yet any increase in the nursing force.

Backwardness in children may result from feeble-mindedness, from defects of nose or throat or vision, but I am becoming more and more impressed with the idea that mal-nutrition, whether from disease or from poverty, or ignorance or carelessness of ordinary rules of hygiene, is by far the most potent factor.

Through the persuasion of the nurse almost entirely we have been able to have many children relieved of adenoids or diseased tonsils or defective vision and with sufficient nurses to make frequent visits to the homes of the parents very much more could be accomplished in the management of these cases of mal-nutrition from whatever cause.

The medical inspector should be consulted both as to the entrance of children into the public schools and their subsequent advance from grade to grade. No child younger nor much under the average weight for a grade should be allowed to enter such a grade unless a careful physical examination tends to show he is capable of the work. The nervous strain and the probability of the ultimate development of some serious and lasting nervous disorder is far greater among such children.

Conveniently located scales for frequently testing the weight of such children could be of great assistance. A child who is not gaining in weight is in practically the same condition as the adult who is actively losing, and demands the watchful care of the family under the advice of the family physician; or as is so often necessary, the visiting nurse. It is certainly not fair to continue to overtax the physical strength of such a child and possibly aid in the development of some inherent weakness into actual disease. I firmly believe the ultimate result would be better if up to the twelfth or fourteenth years children were allowed only one session daily of three or four hours in school. Especially is this true of many of our older school buildings where the heating and ventilation are the very worst and the overcrowding is hopeless. If more time and attention were given by the charitably inclined among the very rich to providing playgrounds in the congested areas of our large cities there would, no doubt, be less need of their rich endowment of hospitals for the poor.

I take it to be unnecessary to refer in detail in this report to conditions reported so often before, such as the deplorable condition of many school buildings—oftentimes demanding new buildings—to the usefulness of open-air schoolrooms, to the need of convenient bathing facilities in many buildings where cleanliness seems unknown at home, to the overcrowding referred to above, and to the segregation of the epileptic and actually feeble-minded. The crying need for the immediate advancement of the work is more school nurses, at least two to each inspector, and without them it may be said that any plan to do more than we are now doing partakes largely of pure theory and is impossible of practical and successful application.

Respectfully submitted,

RICHARD A. URQUHART.

Report of Nurse Miss Agnes P. Kloman,

Assistant to Dr. Richard A. Urquhart.

BALTIMORE, August 15, 1913.

NATHAN R. GORTER, M. D.,
Commissioner of Health.

DEAR SIR:

I herewith submit report on school inspection for the year 1912-1913:

Number of children inspected by doctor and nurse in schools..	13,729
Number inspected in school by nurse..........................	7,345
Number inspected at home by nurse............................	276
Number treated at home by nurse..............................	6
Number treated at school by nurse............................	24
Number of homes visited......................................	957
Number of dispensary visits..................................	59

The work has been conducted about as usual, all cases of ringworm and pediculosis having been excluded till well under treatment. Owing to the prevalence of measles this year, the attendance has not been so good as usual. The vaccination of the school children has been very thoroughly conducted. The teachers are interested and helpful in this co-operation.

Respectfully yours,

AGNES P. KLOMAN.
